The Quest to Understand the Biology of Weight Loss

Drs. Leibel and Rosenbaum have conducted many studies in their attempt to understand how every system in the body reacts to weight loss

Comparing the same person at two different weights lets researchers see how the body reacts to weight loss

An important component of this study is investigating the role of the hormone leptin, which is produced by fat cells

Dr. Leibel was part of the team that first identified leptin in 1994 and established that it plays a crucial role in the regulation of body weight

Leptin must be injected and is still considered experimental for obesity management
