Civil Aviation

This volume looks at the operational standards and obligations in civil aviation, and the consequences of failure to comply with them. It covers a wide range of topics both international and complex in measure.

Civil Aviation

This volume looks at the operational standards and obligations in civil aviation, and the consequences of failure to comply with them. It covers a wide range of topics both international and complex in measure.

Introduction to Air Law

The world of aviation has moved on rapidly since the appearance of the ninth edition of this pre-eminent resource five years ago. Those developments pertain to market access and market behaviour by air carriers, including competition, new perceptions of safety and security, among others, in relation to transparency of accident investigation and cybersecurity, case law in the area of airline liability, with new cases from the United States, product liability and insurance, the United Kingdom, and elsewhere, the growing importance of environmental concerns, the rights and obligations of passengers, also in the context of 'unruly' passengers, and innovative methods for financing aircraft. Special attention has been paid in this edition to regional integration movements, especially in Europe, affecting the mentioned subjects. The book's extensive references to other sources in the field have been expanded and updated by the author and experts in specialised areas. The present edition addresses the following topics: the regulatory framework governing the operation of air services, including the principle of sovereignty in national airspace; the distinction between State and civil aircraft; dispute settlement in international civil aviation; economic regulation of international air transport services, including the establishment of air services agreements; inter-airline cooperation in the context of competition law regimes; liability of the various service providers, in particular airlines, and related insurance coverage; the promotion of safety standards; criminal acts affecting the safety of aviation; the role of international and regional organisations with particular reference to that of the European Union; liability of the aircraft manufacturer for equipment; and financial and security interests in mobile equipment. The many practitioners, officials, business people, and academics with a professional interest in aviation law will appreciate this new edition as one of the fundamental works in the field, and newcomers will discover an incomparable resource. This eleventh edition is ready to be of unmatched service to any practising member of the air law community anywhere in the world.

Cross-border Provision of Air Navigation Services with Specific Reference to Europe

The tremendous flow of air traffic traversing the airspace of the European Union demands extraordinary vigilance on the part of air navigation service providers. Although the first requirement of air navigation services is obviously the enhancement of safety, providers must also attend to the efficiency and optimisation of airspace capacity and the minimisation of air traffic delays. As technological and operational improvements proceed in these areas, jurisdictional issues of responsibility and liability--particularly in cases of mid-air collisions--become ever sharper and more in need of precise definition. This detailed and insightful exposition focuses on these issues from three overlapping perspectives: the international and European legal framework dealing with air navigation services, the question of state

responsibility, and the question of liability for damage inflicted by air navigation service providers. The author's in-depth analysis includes examination of many elements, among them the following: * the interrelated roles of the International Civil Aviation Organization (ICAO), the European Civil Aviation Conference (ECAC), the European Organisation for the Safety of Air Navigation (EUROCONTROL), the European Community's European Aviation Safety Agency (EASA), and other international bodies; * the Single European Sky initiative, its establishment of Functional Airspace Blocks (FUAs), and its ongoing research program (SESAR); * establishment of transparent lines of state responsibility in the context of cross-border provision of air navigation services; and prospects for the imposition of a transparent liability regime on corporatized air navigation service providers. In conclusion, the author enumerates the essential elements required for cross-border provision of air navigation services and offers well-thought-out final recommendations and conclusions on the most preferable way to pursue such cross-border provision within and outside the European Community. A model agreement for the delegation of air navigation service provision appears as an appendix. All professionals concerned with air navigation, in Europe and elsewhere, will appreciate the depth of knowledge and commitment apparent in this book. The deeply informed insights manifest in its pages will be of enormous value to aviation agency officials and air law practitioners everywhere.

Aviation Law Review

The Aviation Law Review, edited by Sean Gates of Gates Aviation LLP, is a vital addition for the libraries of those with commercial, legal or academic interest in international aviation law. Topics examined range from Brexit, the European Aviation Safety Agency, lithium batteries to unmanned aerial vehicles and the regulation that can barely keep up with their proliferation. There are in-depth examinations of aviation in law in 34 jurisdictions with contributors including: USA - Garrett J Fitzpatrick/James W Hunt/Mark Irvine, Fitzpatrick & Hunt, Pagano, Aubert LLP; UK - Robert Lawson, Quadrant Chambers; Spain - Diego Garrigues, The Air Law Firm; Belgium - Cyril-Igor Grigorieff/ Mr Dimitri de Bournonville, Kennedy's

International Aviation Law

International Aviation Law: A Practical Guide explains the international context and application of the law as it applies to commercial and recreational aviation, and to the broader aviation environment. It provides a comprehensive introduction to all aspects of aviation law from criminal law to contract law to the legal duties and responsibility of aircrew and other aviation personnel including airport operators, air traffic controllers and aircraft engineers. Each area of the law is clearly explained in accessible language and supported with practical case studies to illustrate the application of the law within an operational aviation context. It also provides advice on how to avoid or minimize legal liability for aviation practitioners and enthusiasts.

Air Navigation Law

The aviation community, in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the Civil Air Navigation Services Organization (CANSO) play leading roles, is hard at work in bringing aviation into the 21st Century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere, in the fields of personnel licensing, rules of the air, accident investigation and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation. This book provides that discussion. Some of the subjects discussed in this book are: sovereignty in airspace; flight information and air defence identification zones; rules of the air; personnel licensing; meteorological services; operations of aircraft; air traffic services; accident and incident investigation; aerodromes; efficiency aspects of aviation and environmental protection; aeronautical charts and information; the carriage of dangerous goods; and NextGen and SESAR. Except for NextGen and SESAR, these subjects form the titles of the Annexes to the Chicago Convention that particularly involve the rights and liabilities of the key players involved in air navigation.

The Law of International Carriage by Air

Seminar paper from the year 2008 in the subject Business economics - Law, grade: 1,3, University of Applied Sciences Wildau (WIT Wildau), course: Aviation Law, 12 entries in the bibliography, language: English, abstract: Abstract: The developments of more than hundred years of aviation history have lead to a framework of laws on different aspects of the aviation industry. For the people aboard the flying aircraft, different rules are applied as compared on land. Within the field of aviation, the air is the major space touched. But because until the 20th century nobody was able to control an air vehicle, no conflicts erased for intra- or crossborder air traffic. This circumstance changed quickly. Only 16 years after the remarkable milestone of the first engine-powered flight by the Wright brothers from 1903, the growing importance of air travel lead to the first international agreements for air transport. When in 1919 the first scheduled air service between Paris and London came into operation, the necessity for air regulations was an incontrovertible fact. The first agreement was written down in the Paris Convention, which was held in the same year and ratified from 32 nations. The major result of the convention was the recognition of exclusive sovereignty for the states over their airspace, which is still the applied principle today. The agreement also included the first definition of the term aircraft and annexes for technical standards. Nowadays two distinct areas of air law can be differentiated. The international public air law is dealing with rights and obligations of nations in the field of civil aviation. The international private air law governs legal issues for private entities within international air transport, regulating mainly the relation between air carriers and private individuals and cargo shippers. This paper will focus on those aspects. It will give insights of the major milestones of private international air law like the Warsaw System created

International and EU Aviation Law

This book offers an extraordinary wealth of information, from the ground up, of the law governing and regulating air transport today, with a strong emphasis on international aviation. A team of distinguished authors in the field of aviation law provide a cogent synthesis from which sound legal opinions and strategies of legal action may be confidently built. Among the many topics here in depth are the following: definition and classification of airspace; distinction between civil and state aircraft; air navigation and air traffic control services; airport charges and overflight charges; structure of ICAO; standard-setting functions and audit functions of ICAO; functions of the International Air Transport Association (IATA); policy and effects of deregulation and liberalization of air transport policy; the International Registry for Aircraft Equipment; air carrier liability regimes and claims procedure; measures to combat aviation terrorism, air piracy and sabotage; and the Open Skies Agreements. This publication cites significant legislation and court rulings, including from the United States and the European Union, where far-reaching measures on market access, competition and passenger rights have set trends for other regions of the world. The special case of Latin America has a chapter to itself. At a time when commercial aircraft have been used as lethal weapons for the first time, aviation law finds itself in the front line of responsibility for maintaining global aviation security.

Limitation of Liabilities in International Air Law

The law plays a significant role in ensuring aviation security. This book addresses new and emerging threats to civil aviation; evaluates security tools now in use such as the Public Key Directory, Advance Passenger Information, Passenger Name Record and Machine Readable travel documents in the context of their legal and regulatory background; and discusses applicable security treaties while providing an insight into the process of the security audits conducted by the International Civil Aviation Organization (ICAO). The book also examines issues of legal responsibility of States and individuals for terrorist acts of third parties against civil aviation and discusses from a legal perspective the latest liability Conventions adopted at ICAO. The Conclusion of the book provides an insight into the application of legal principles through risk management.

Aviation Security Law

An Introduction to Air Law has proven itself a comprehensive and up-to-date view of all the main components making up this interesting and topical branch of international law. Coverage includes such aspects as liability of the carrier, insurance, product liability, sovereignty in airspace, aviation personnel, organizations and conventions, automation, liability for damage, search and rescue operations, and criminal offenses such as hijacking.

Memorandum on ICAO

Aerospace Law and Policy Series, Volume 11 In recent years, few industries have grown so prodigiously as that of unmanned aircraft systems (UAS) and, as a result, developments in national, regional, and international law and policy are being initiated and implemented. This new edition of the definitive survey and guide, first published in 2016, reflects the expansion of this sector and the importance placed on it by a diverse range of stakeholders, as well as the enlarged regulatory and policy landscape. In addition to updating many of the original chapters, the second edition covers new topics and moves away from a purely introductory book to a more detailed and critical compendium. Authorship has also been extended beyond the original scope of contributors, which originally centred around those affiliated with Leiden University's Institute of Air and Space Law, and now includes additional experts from all around the world, each of whom explores both already existing rules and proposals coming from national, regional and international levels. As well as broadened discussions on such fundamental legal issues as insurance, financing, liability, accidents investigation, privacy, cyber security, stakeholder organisations and industry standards, the second edition takes into account major recent developments in such areas as the following: applicability and relevance of international regulatory instruments; coming into force of the European Union UAS-related laws; evolution of different States' national law; public safety (e.g., design, production, operation and maintenance); development of unmanned traffic management systems; commercial operations, including urban air mobility (e.g., flying taxis, cargo delivery, high-altitude activities); and developments in defence and security (e.g., dual-use, counter-UAS industry to combat illegal use). As in the first edition, a representative cross section of national laws is included, covering twenty-one different jurisdictions. This fully updated edition not only synthesises and clarifies the complex body of international, regional and national UAS-related law, but also provides expert insight into trends and areas of concern for numerous stakeholders. Without a doubt, it will be of immeasurable value to lawyers, relevant governmental and non-governmental agencies, aviation law scholars, and strategic planners in the wider aviation and transport industries.

An Introduction to Air Law

Studies in International Air Law: Selected Works of Bin Cheng brings together for the first time the most influential of his many significant works. The selected essays, collected by editor Professor Cheng Chia-Jui, provide a comprehensive survey of international air law, authoritative and pioneering analyses of international air transport, the legal status of aircraft and crimes on board and against aircraft and air carrier's liability. Widely acknowledged as the "Father of International Air Law," Studies in International Air Law reveals the author's enormous contributions to the science of air law along with his extraordinary intellectual and analytical spirit.

The Law of Unmanned Aircraft Systems

The flying public, airlines, and governments will all agree on one date that changed commercial flying: that was September 11, 2001. The first edition of Aviation Law: Cases, Laws and Related Sources, described early consequences of that event, particularly compensation of victims and early tightening of aviation security. Subsequently laws and regulations affecting all aspects of aviation changed so rapidly that it became difficult to set a cut-off date for the second edition. The rapid flow of events made an update urgent. Several gaps in the materials of the first edition became evident as the book was used. The authors filled those gaps, pruned old materials and added much new material describing not only the later developments, but also evolving economics and flight technology. The objective of the case book is to offer a basic handbook for air law practitioners providing them with a starting point for almost any subject they may encounter.

Studies in International Air Law

This book offers a compact - yet exhaustive - and easily comprehensible reference book that deals with the most general aspects of international air law, as well as with the constitutional issues and law-making functions of the International Civil Aviation Organization (ICAO). Specialized legal literature dealing with different aspects of international air law is rare, the developments often overtake the existing writings and there is a continuous need not only for updating but also for future-oriented thinking. This book cannot fail to be of importance to anyone interested in international air law.

Aviation Law: Cases, Laws and Related Sources

Seminar paper from the year 2013 in the subject Law - Miscellaneous, grade: 1,0, University of Applied Sciences Wildau (Wildau Institute of Technology), course: Aviation Management - The Law

of International Carriage by Air, language: English, abstract: The invention of aircraft is a magnificent piece of technology, which is a result of a long process of human effort. With the use aircraft for military purposes during World War I it was shown that aviation had great potential even in time of peace. The essential role of aviation industry in everyone's life does not need any further explanation. Today's generations and those of the future have a quite natural interest in its development and safety. While flying offers various opportunities to mankind, at the same time, it is still a risky activity and accidents can be absolutely devastating. Even if aviation stands for one of the safest modes of transport, incidents will occur and people and airfreight will get damaged. The mentioned facts and the growing number and use of aircraft called for some kind of international regulation of aviation since from the very beginning (McNair 1964, p. 9). In general aviation is a global business, which creates a need for international common rules. Over the years there have been quite many attempts to hold an international convention on the area. It was from utmost importance to create an adequate and uniform compensation system for the passengers and cargo but at the same to protect the infant aviation industry (Paulsson 2009, p. 6). The subject of this paper is the regime of passenger liability in private international air law. This regime of liability is based on two global legal systems, represented by the ageing Warsaw System created from 1929 and the new Montreal Convention of 1999. The historical development and explanation of both systems, including their amendments and supplementary instruments, acts as basis for this project paper. In a second step I am going to deduce the necessities for the creation of the Montreal Convention. Then I will go into detail of its achievements and deficiencies concerning passenger liability in private international air law. Finally the paper is closing with a short summary of the development of the general and in particular the legal liability issues of both main Conventions.

International Air Law and ICAO

Foundations of Aviation Law is an easy-reading general primer into the often complex world of aviation law, written for aviation students as well as legal professionals who are looking for broad-based, introductory coverage of the subject. The text begins with basic legal concepts that build a foundation for in-depth exploration of aviation-specific subject matter. This allows the instructor to utilize one text in situations where a basic foundation in law is required before moving into aviation law specifics. It includes citations to relevant and key court decisions that provide a solid underpinning for the student of aviation law. The book is divided into six general categories, with fifteen relevant sub-chapters, allowing focused learning into particular areas of law. Throughout it features chapter summaries, key word indices and review questions. The design easily allows instructors to develop syllabi that spotlight the specific area of law that they are interested in exploring, providing comprehensive coverage of both traditional introductory legal concepts and topical aviation subject matter.

Liability Regimes in International Air Transportation

There has been a long felt need for a book which details the legal aspects of the airport business. This book will discuss the nature of the airport business and inquire into the constraints faced by airports in obtaining their revenues. It will also discuss the liability of an airport operator for injury to persons who use the airport premises and liability for vehicular accidents landside or airside including work accidents of airport employees or other accidents caused by airport employees of the airport. The bulk of the book will be dedicated to the legal aspects of issues such as principles of lease financing of premises and equipment; employee contracts; agency; general contractual and tortious liability of airports; negligent entrustment of property and equipment; obligations of oversight of tenants in their implementation and application of contractual terms, Risk Management; legal principles pertaining to the oversight of airport safety and security; competition; labour law; and the art of negotiation.

International Standards and Recommended Practices

In our post-9/11 world, the laws of aviation are under intense scrutiny. From torts law and victim compensation to passenger screening, pilots with guns, and international aviation agreements, the practice of aviation law is burgeoning. The book, AVIATION LAWS: Cases, Laws, and Related Sources, fills a gap in legal literature. It is directed to both practicing lawyers and to law students. The book introduces all the major areas of air law: International air law regime, crimes involving aircraft, economic regulation of domestic and international air carriage, litigation management, domestic and international liability regimes, governmental immunity from liability, airport law, airline travel restrictions, airport law, insurance, NTSB accident investigation, aircraft financing, FAA regulation of air safety, and airline labor relations. These subjects are presented not only in explanatory text, but also in cases and related

source materials. The most important texts are annexed. The authors, Professors Larsen and Gillick, have regularly taught the course in Air Law at Georgetown University Law Center for more than 30 years. They have long time hands-on experience at the Department of Transportation and in private practice. Professor Sweeney, John D. Calamari Distinguished Professor of Law, has taught the course at Fordham University Law School for 30 years. He also has extensive transportation practice background. Classroom adoption: \$85/copy for 10 or more copies. Student Edition : 1-57105-340-9, \$95/copy Published under the Transnational Publishers imprint.

Foundations of Aviation Law

This book is the first attempt to analyse the relevant international conventions governing the liability of airlines to passengers and third parties on the ground from a risk perspective. The book analyses the transformation of the notion of risk over time and identifies the ways and the extent to which social perceptions have influenced the liability of airlines in the aftermath of safety accidents (Warsaw Convention System, Montreal Convention, Rome Convention, and New General Risks Convention) and terrorism related incidents (New Unlawful Interference Convention).

Airport Business Law

European Air Law is a highly useful looseleaf compilation of the European Community legislation & the case law of the European Court of Justice. This comprehensive guide provides all relevant background material & case law in the field of aviation law & also contains: a major introduction into this dynamic field of air law a useful bibliography a practical set-up & indexes for easy reference a foreword by Karl Otto Lenz, Advocate-General at the European Court of Justice. It is a time-saving reference tool because it combines all important European Treaties with case law & other relevant literature. Update frequency: 2-3 supplements a year

Aviation Law: Cases, Laws, and Related Sources

The International Civil Aviation Organization's (ICAO) decision to require aviation organizations to adopt Safety Management Systems poses a major problem especially for small and medium sized aviation companies. The complexity of regulations overstrains the aviation stakeholders who seek to fully advantage from them but have no clear guidance. The aim of the book is to show the implementation of such a new system with pragmatic effort in order to gain a gradation for smaller operators. This approach should illustrate the leeway in order to adapt the processes and to show the interfaces between Corporate Risk Management and Safety Management. The book shows how to build a system with reasonable effort, appropriate to the size and complexity of the specific operator. It also gives inputs on the key aspects and how to effectively operate such a system with the various interfaces. Furthermore, the book highlights the importance of Corporate Risk Management independent of Safety Management Systems based on ICAO.

Risk and Liability in Air Law

This timely and authoritative book addresses the commercial and liability issues following commercial aviation into and beyond the year 2000.

Essays in Air Law

This book explores the legal and regulatory aspects of the complex air cargo sector, discussing in detail the general principles of the carriage of air cargo; artificial intelligence and air cargo; facilitation; carriage of hazardous goods; human remains; and animals, as well as cargo security; price fixing and anti competitive conduct in air cargo operations; liability issues; the air cargo supply chain and contract of carriage. It also discusses related achievements of the International Civil Aviation Organization; the International Air Transport Association and Airports Council International. The value of goods carried by airlines represents 7.4% of the global Gross Domestic Product. While cargo carried by air accounts for less than 1% of global cargo carriage, airlines carry 35% of the value of world trade, making this industry highly valuable and efficient, and the most reliable way to transport goods throughout the world. On average, airlines transport 52 million metric tons of goods per annum, worth an equivalent of \$6.8 trillion, i.e. \$18.6 billion worth of goods daily.

Federal Aviation Regulations

Once a byword for the economic power of national government - with competition strictly regulated - European commercial aviation has now virtually become a market without state-imposed anti-competitive restrictions. Although intended to enhance competition, this situation has in fact driven airlines to form massive global alliances cartels that offer ever-shrinking benefits to the consumer. In this extraordinarily thorough, blow-by-blow analysis of how this happened ? or was allowed to happen ? one of the world's most eminent aviation law authorities explores the subject with a lucid insight fully informed by historical breadth and a keen appreciation of current pressures. Commercial aviation emerges as the crucible par excellence of the convergence of prevailing global ideology, economics, and international law. Among the numerous interrelated topics investigated in depth by Professor Dempsey, the following may be mentioned: the principal actors, including scores of airlines, the European Union, and a number of air transport associations; the labyrinth of bilateral air transport agreements; the relevance of the Treaty of Rome's competition rules and the EU merger regulations to air transport; the important Court of Justice cases that circumscribed the zone of application in which the competition rules can regulate air transport: French Seamen's Case, Transport Policy Decision, Olympic Airway, Nouvelles Fronti?res, Ahmed Saeed, and the 2002 `Open Skies' Decision; the 1991 U.S.-EC agreement regarding the application of competition laws; the sequence of EU aviation regulatory `packages'; regulation of non-economic issues (air traffic congestion, noise limitations, air carrier liability, civil aviation accident/incident investigations, denied boarding compensation); the effect of the U.S. government's increasing invocation of antitrust immunity; computer reservation systems (especially code-sharing procedures); jointly-owned web sites for ticket sales and other e-commerce joint ventures; frequent flyer program alliances; and the emergence of global megacarriers. The author's presentation emphasizes the regulatory constructs that currently affect the European air transport market: pricing and tariffs, pooling of revenue, market access (licensing, capacity limits, traffic rights, slot allocation), ground handlings, cargo services, state aid, and the power of the EU to act on the commercial aviation world stage for Member States. Each of these areas of analysis begins with an overview of the general regulatory environment for that area followed by a detailed chronological delineation of relevant packages, proposals, resolutions, and regulations. Because of the enormous role played by international air transport with respect to gross national product, employment, and energy consumption, European Aviation Law is of great importance not only to European lawyers but to officials, policymakers, practitioners, and academics in a number of relevant fields worldwide.

Aviation Risk and Safety Management

This book is the first attempt to analyse the relevant international conventions governing the liability of airlines to passengers and third parties on the ground from a risk perspective. The book analyses the transformation of the notion of risk over time and identifies the ways and the extent to which social perceptions have influenced the liability of airlines in the aftermath of safety accidents (Warsaw Convention System, Montreal Convention, Rome Convention, and New General Risks Convention) and terrorism related incidents (New Unlawful Interference Convention).

Aviation Trends in the New Millennium

A jealous puppy has a solution for his young master's object of affection.

Law and Regulation of Air Cargo

International Air Carrier Liability brings together essential treaties and airline-to-airline agreements on air carrier liability, safety and security, and supplements these with expert commentary and analysis. The examination considers the general regulatory framework of international civil aviation (including the Chicago Convention and related documents) and how the liability regime fits within that framework. The book is divided into three parts: dealing in turn with liability, safety and security, and civil aviation regulation. Part I, for example, provides comment and analysis of the international air-carrier liability regime, how the main liability conventions operate, and the application of these conventions to international carriage by air (passengers, baggage and cargo). Given its subject matter and the universal state party participation in these conventions, this book has truly global application. David Hodgkinson and Rebecca Johnston aim to provide a reference aid for legal practitioners (at law firms, airlines, manufacturers, aviation-related corporations and government departments and agencies), as well as academics, students (undergraduate and post graduate) and government officials regarding treaties, domestic laws and documents concerned with these vital legal issues.

The General Aviation Accident Liability Standards Act

Against the backdrop of enormous technological strides, this book argues that the air transport industry must be constantly vigilant in its efforts to employ a legal regime that is applicable to the aeronautical and human aspects of the carriage by air of persons and goods. In this regard, safety and security are of the utmost importance, both in terms of safe air navigation and the preservation of human life. Although the International Civil Aviation Organization (ICAO) addresses legal issues through its Legal Committee, many emerging issues that urgently require attention lie outside the Committee's purview. This book analyzes in detail the items being considered by ICAO's Legal Committee, considers the legal nature of ICAO, and discusses whether or not ICAO's scope should be extended. Since the limited issues currently addressed by ICAO do not reflect the rapidly changing realities of air transport, the book also covers a broad range of key issues outside the parameters set by ICAO, such as: the need to teach air law to a new generation of aviation professionals; combating cyber-crime and cyber-terrorism; the regulation of artificial intelligence; traveller identification; interference with air navigation; human trafficking; unruly passengers; climate change; air carrier liability for passenger death or injury; Remotely Piloted Aircraft Systems (drones); and the cabin crew and their legal implications.

General Aviation Accident Liability Standards Act of 1989

This book reviews and critically analyzes the current legal framework with regard to a more just culture for the aviation sector. This new culture is intended to protect front-line operators, in particular controllers and pilots, from legal action (except in the case of willful misconduct or gross negligence) by creating suitable laws, regulations and standards. In this regard, it is essential to have an environment in which all incidents are reported, moving away from fears of criminalization. The approach taken until now has been to seek out human errors and identify the individuals responsible. This punitive approach does not solve the problem because frequently the system itself is (also) at fault. Introducing the framework of a just culture could ensure balanced accountability for both individuals and complex organizations responsible for improving safety. Both aviation safety and justice administration would benefit from this carefully established equilibrium.

The General Aviation and Accident Liability Standards Act of 1988
