Building Cost Planning for the Design Team

"When will I get it? How much will it cost?" For the client, these are the two most critical questions. Cost Planning answers these questions and is crucial to the team working on the design and construction of a project. This introductory text on building economics and cost planning provides the reader with the fundamental skills and knowledge to operate as a building professional in the area of economic advice

and decision making at the project level. Cost planning is not an esoteric area for specialists alone, but a core skill for the whole design team. Starting from the environment in which cost planning and design activities take place, the book works through the cost planning process in theory and practice, discussing the issues involved from a design team and client perspective. With analysis of key concepts related to cost control such as life cycle costing, value management, cost modelling and accuracy, and integration of estimating techniques, the authors provide an unequalled introduction to a crucial aspect of professional construction management.

RICS New Rules of Measurement

The RICS new rules of measurement are a suite of documents issued by the RICS Quantity Surveying and Construction Professional Group. The rules have been written to provide a standard set of measurement rules that are understandable by all those involved in a construction project. They provide advice and best practice guidance to RICS members involved in the cost management of construction projects worldwide. This volume, the RICS new rules of measurement: Order of cost estimating and elemental cost planning, provides fundamental guidance on the quantification of building works for the purpose of preparing cost estimates and cost plans. Direction on how to quantify other items forming part of the cost of a construction project, but which are not reflected in the measurable building work items, is also provided - i.e. preliminaries, overheads and profit, project team and design team fees, risk allowances, inflation, and other development and project costs.

The Antics of Mrs Paws

Mrs Paws is the creation of Christine Gregory, and through a short series of stories, her antics and adventures with her and her friends come to light. On the door of a small room within the cottage of Mr and Mrs Gregory is a quaint little sign that reads 'Enchanted Teddy and Dolly Sanctuary', so called because there's something quite magical behind this door. It came as such a shock to Mrs Gregory when she realised that her cuddlesome bear, along with some of her friends, actually came to life. So

read on and find out just what they get up to in this cosy little cottage, the mystical wood and, of course, the fairy garden, but be sure not to tell anyone, this is your very own secret.

Hamlet on the Holodeck, updated edition

An updated edition of the classic book on digital storytelling, with a new introduction and expansive chapter commentaries. I want to say to all the hacker-bards from every field—gamers, researchers, journalists, artists, programmers, scriptwriters, creators of authoring systems... please know that I wrote this book for you.” —Hamlet on the Holodeck, from the author's introduction to the updated edition Janet Murray's *Hamlet on the Holodeck* was instantly influential and controversial when it was first published in 1997. Ahead of its time, it accurately predicted the rise of new genres of storytelling from the convergence of traditional media forms and computing. Taking the long view of artistic innovation over decades and even centuries, it remains forward-looking in its description of the development of new artistic traditions of practice, the growth of participatory audiences, and the realization of still-emerging technologies as consumer products. This updated edition of a book the *New Yorker* calls a “cult classic” offers a new introduction by Murray and chapter-by-chapter commentary relating Murray's predictions and enduring design insights to the most significant storytelling innovations of the past twenty years, from long-form television to artificial intelligence to virtual reality. Murray identifies the powerful new set of expressive affordances that computing offers for the ancient human activity of storytelling and considers what would be necessary for interactive narrative to become a mature and compelling art form. Her argument met with some resistance from print loyalists and postmodern hypertext enthusiasts, and it provoked a foundational debate in the emerging field of game studies on the relationship between narrative and videogames. But since *Hamlet on the Holodeck*'s publication, a practice that was largely speculative has been validated by academia, artistic practice, and the marketplace. In this substantially updated edition, Murray provides fresh examples of expressive digital storytelling and identifies new directions for narrative innovation.

Cybertext

Do the rapidly expanding genres of digital literature mean that the narrative mode--novels, films, television drama--is losing its dominant position in our culture? Author Espen Aarseth eases our fears of literary loss (at least temporarily) by pointing out that electronic text requires an interactive response to generate a literary sequence. Where's the fun if you have to write your own ending? 21 illustrations.

Electrothermics

This book concerns the analysis and design of induction heating of poor electrical conduction materials. Some innovating applications such as inductive plasma installation or transformers, thermo inductive non-destructive testing and carbon-reinforced composite materials heating are studied. Analytical, semi-analytical and numerical models are combined to obtain the best modeling technique for each case. Each model has been tested with experimental results and validated. The principal aspects of a computational package to solve these kinds of coupled problems are described. In the first chapter, the mathematical tools for coupled electromagnetic and thermal phenomena are introduced. In Chapter 2, these tools are used to analyze a radio frequency inductive plasma installation. The third chapter describes the methodology of designing a low frequency plasma transformer. Chapter 4 studies the feasibility of the thermo inductive technique for non-destructive testing and the final chapter is dedicated to the use of induction heating in the lifecycle of carbon-reinforced composite materials. Contents
1. Thermal and Electromagnetic Coupling, Javad Fouladgar, Didier Trichet and Brahim Ramdane. 2. Simplified Model of a Radiofrequency Inductive Thermal Plasma Installation, Javad Fouladgar and Jean-Pierre Ploteau. 3. Design Methodology of A Very Low-Frequency Plasma Transformer, Javad Fouladgar and Soury Mohamed Mimoune. 4. Non Destructive Testing by Thermo-Inductive Method, Javad Fouladgar, Brahim Ramdane, Didier Trichet and Tayeb Saidi. 5. Induction Heating of Composite Materials, Javad Fouladgar, Didier Trichet, Samir Bensaid and Guillaume Wasselynck

Computers as Theatre

Brenda Laurel's *Computers as Theatre* revolutionized the field of human-computer interaction, offering ideas that inspired generations of interface and interaction designers-and continue to inspire them. Laurel's insight was that effective interface design, like effective drama, must engage the user directly in an experience involving both thought and emotion. Her practical conclusion was that a user's enjoyment must be a paramount design consideration, and this demands a deep awareness of dramatic theory and technique, both ancient and modern. Now, two decades later, Laurel has revised and revamped her influential work, reflecting back on enormous change and personal experience and forward toward emerging technologies and ideas that will transform human-computer interaction yet again. Beginning with a clear analysis of classical drama theory, Laurel explores new territory through the lens of dramatic structure and purpose. *Computers as Theatre, Second Edition*, is directed to a far wider audience, is written more simply and elegantly, is packed with new examples, and is replete with exciting and important new ideas. This book Draws lessons from massively multiplayer online games and systems, social networks, and mobile devices with embedded sensors Integrates values-driven design as a key principle Integrates key ideas about virtual reality Covers new frontiers, including augmented reality, distributed and participatory sensing, interactive public installations and venues, and design for emergence Once more, Brenda Laurel will help you see the connection between humans and computers as you never have before-and help you build interfaces and interactions that are pleurably, joyously right!
