Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.

The Light of Grace: John Owen on the Authority of Scripture and Christian Faith

Over the past several centuries, John Owen's writings on scripture have captured the attention of numerous interpreters across a relatively diverse range of disciplines. His own distinctive contribution to this doctrine was forged with a genuine fear for the on-going pre-eminence of scriptural authority in the English church firmly in view. In the face of various rival perspectives, Owen insists every Christian believer ought to be clear on the reason they believe scripture to be the word of God. Focussing on the treatise *Reason of Faith* (1677) in conversation with his wider theological corpus, Andrew M. Leslie studies Owen's approach to scriptural authority and Christian faith. He argues that Owen creatively drew upon an ecumenical dogmatic and metaphysical heritage to restate and refine the traditional Reformed position on scripture's divine authority, sensitive to developments in his own late seventeenth-century context. In particular, Leslie explores how Owen shares a growing concern to ground Christian faith in objective evidence, all-the-while ensuring that its ultimate foundation lies in the irresistible authority and truthfulness of God, mediated "in and by" the inspired text of scripture. Leslie also draws out the broader significance Owen ascribes to scripture in shaping a believer's relationship with the Triune God, especially its vital role in their gradual transformation into the likeness or image of Christ.

The Colbeck collection was formed over half a century ago by the Bournemouth bookseller Norman Colbeck. Focusing primarily on British essayists and poets of the nineteenth century from the Romantic

Movement through the Edwardian era, the collection features nearly 500 authors and lists over 13,000 works. Entries are alphabetically arranged by author with copious notes on the condition and binding of each copy. Nine appendices provide listings of selected periodicals, series publications, anthologies, yearbooks, and topical works.

A Bookman's Catalogue Vol. 2 M-End

This book explores Oscar Wilde's fascination with the eighteenth-century forger Thomas Chatterton, who tragically took his life at the age of seventeen. This innovative study combines a scholarly monograph with a textual edition of the extensive notes that Wilde took on the brilliant forger who inspired not only Coleridge, Wordsworth, and Keats but also Victorian artists and authors. Bristow and Mitchell argue that Wilde's substantial "Chatterton" notebook, which previous scholars have deemed a work of plagiarism, is central to his development as a gifted writer of criticism, drama, fiction, and poetry. This volume reveals that Wilde's research on Chatterton informs his deepest engagements with Romanticism, plagiarism, and forgery, especially in his later works. Grounded in painstaking archival research that draws on previously undiscovered sources, Oscar Wilde's Chatterton explains why, in Wilde's personal canon of great writers, Chatterton stood as an equal in this most distinguished company.

Oscar Wilde's Chatterton

The fin de siècle not only designated the end of the Victorian epoch but also marked a significant turn towards modernism. *Extraordinary Aesthetes* critically examines literary and visual artists from England, Ireland, and Scotland whose careers in poetry, fiction, and illustration flourished during the concluding years of the nineteenth century. This collection draws special attention to the exceptional contributions that artists, poets, and novelists made to the cultural world of the late 1880s and 1890s. The essays illuminate a range of established, increasingly acknowledged, and lesser-known figures whose contributions to this brief but remarkably intense cultural period warrant close attention. Such figures include the critically neglected Mabel Dearmer, whose stunning illustrations appear in Evelyn Sharp's radical fairy tales for children. Equally noteworthy is the uncompromising short fiction of Ella D'Arcy, who played a pivotal role in editing the most famous journal of the 1890s, *The Yellow Book*. The discussion extends to a range of legendary writers, including Max Beerbohm, Oscar Wilde, and W.B. Yeats, whose works are placed in dialogue with authors who gained prominence during this period. Bringing women's writing to the fore, *Extraordinary Aesthetes* rebalances the achievements of artists and writers during the rapidly transforming cultural world of the fin de siècle.

Extraordinary Aesthetes

"This project is the first comprehensive study of a phenomenon that not only dominated the American arts of the 1870s and 1880s, but also helped set the course of such later developments in the United States as the Arts and Crafts movement, the indigenous interpretation of Art Nouveau, and even the rise of modernism. In fact, the early history of the Metropolitan--its founding, its sponsorship of a school of industrial design, and its display of decorative works--is inextricably tied to the Aesthetic movement and its educational goals. "In Pursuit of Beauty: Americans and the Aesthetic Movement" comprised some 175 objects including furniture, metalwork, stained glass, ceramics, textiles, wallpaper, painting, and sculpture. Some of these had rarely been displayed; others, although familiar, were being shown in new and even startling contexts. The exhibition and catalogue are arranged thematically to illustrate both the major styles of a visually rich movement and the ideas that generated its diversity"--From publisher's description.

In Pursuit of Beauty

The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Delve into what it was like to live during the eighteenth century by reading the first-hand accounts of everyday people, including city dwellers and farmers, businessmen and bankers, artisans and merchants, artists and their patrons, politicians and their constituents. Original texts make the American, French, and Industrial revolutions vividly

A Collection of Papers, Relating to a Scheme, Laid Before the Trustees of the Linen Manufacture. for the More Effectual Reformation of Lappers. by Robert Ross, Junior, Esq

This volume presents for the first time the complete textual history of one of the most famous love letters ever written. Addressed to Wilde's lover, Lord Alfred Douglas, and composed in Reading Gaol, it was later given the title 'De Profundis' by Wilde's friend and literary executor, Robert Ross. It was Ross's severely abridged and sanitized version, published in 1905 and again 1908, which inaugurated the tradition of seeing De Profundis as the apologia pro sua vita of a broken man. This edition takes account of this complex heritage by arguing that Wilde's prison document may be seen not just as the basis of a letter (a typed copy of which may have been sent to Douglas) but also as an unfinished literary work which he intended for public consumption at some future date. Such a case is made by placing in the public domain, often for the first time, a number of different works, derived from different texts, each of which bears witness to Wilde's multiple intentions for his prison document. These texts comprise: the manuscript held in the British Library; the version of Wilde's letter published by his son, Vyvyan Holland, from a typescript bequeathed to him by Robert Ross; hitherto unpublished witnesses to that typescript; and Ross's editions, collated with each other. The commentary to this edition - again for the first time - sets Wilde's story of his own life in 'De Profundis' against the testimony of other players in his drama, including, most importantly, that of Douglas. In so doing it exposes the partial nature of Wilde's narrative, as well as the personal obsessions which animated it. The commentary also demonstrates a hitherto unnoticed element of Wilde's work, the extent and nature of its richly layered intertextuality and its similarity, in its compositional practices, to many of his earlier works.

Essays in English Literature

'Wilde did not converse - he told tales.' Oscar Wilde was already famous as a brilliant wit and raconteur when he first began to publish his short stories in the late 1880s. They have never lacked readers and admirers, George Orwell and W. B. Yeats among them. The stories give free rein to Wilde's originality, literary skill, and sophistication. They include poignant fairy-tales such as 'The Happy Prince' and 'The Selfish Giant', and the extravagant comedy and social observation of 'Lord Arthur Savile's Crime' and 'The Canterville Ghost'. They also encompass the daring narrative experiments of 'The Portrait of Mr. W. H.', Wilde's fictional investigation into the identity of the dedicatee of Shakespeare's sonnets, and the 'Poems in Prose', based on the Gospel stories. This edition demonstrates the centrality of Wilde's shorter fiction in his literary career, and his continuing development and experimentation with the short story format. Combining myth, romance, and irony, Wilde's stories enthrall and challenge the reader. ABOUT THE SERIES: For over 100 years Oxford World's Classics has made available the widest range of literature from around the globe. Each affordable volume reflects Oxford's commitment to scholarship, providing the most accurate text plus a wealth of other valuable features, including expert introductions by leading authorities, helpful notes to clarify the text, up-to-date bibliographies for further study, and much more.

Solutions Manual [for] Automatic Control Systems

This introduction to automatic control systems has been updated to reflect the increasing use of computer-aided learning and design. Aiming at a more accessible approach, this edition demonstrates the solution of complex problems with the aid of computer software; integrates several real world applications; provides a discussion of steady-state error analysis, including nonunity feedback systems; discusses circuit-realization of controller transfer functions; offers a treatment of Nyquist criterion on systems with nonminimum-phase transfer functions; explores time-domain and frequency domain designs side-by-side in one chapter; and adds a chapter on Design of Discrete-Data Control Systems.

Automatic Control Systems

Stresses the theory & application of control systems with a focus on conventional analysis & design methods, state variable methods, & digital control systems.

Solutions Manual to Accompany Automatic Control Systems

In recent years, automatic control systems have been rapidly increasing in importance in all fields of engineering. The applications of control systems cover a very wide range, from the design of precision control devices such as delicate electronic equipment to the design of massive equipment such as that used for the manufacture of steel or other industrial processes. Microprocessors have added a new dimension to the capability of control systems. New applications for automatic controls are continually being discovered. This book offers coverage of control engineering beginning with discussions of how typical control systems may be represented by block diagrams. This is accomplished by first demonstrating how to represent each component or part of a system as a simple block diagram, then explaining how these individual diagrams may be connected to form the overall block diagram, just as the actual components are connected to form the complete control system. Because actual control systems frequently contain nonlinear components, considerable emphasis is given to such components. The book goes on to show that important information concerning the basic or inherent operating characteristics of a system may be obtained from knowledge of the steady-state behavior. Continuing on in the book's coverage, readers will find information involving: how the linear differential equations that describe the operation of control systems may be solved algebraically by the use of Laplace transforms; general characteristics of transient behavior; the application of the root-locus method to the design of control systems; the use of the analog computer to simulate control systems; state-space methods; digital control systems; frequency-response methods; and system compensation.

Manufacturing and operations management paradigms are evolving toward more open and resilient spaces where innovation is driven not only by ever-changing customer needs but also by agile and fast-reacting networked structures. Flexibility, adaptability and responsiveness are properties that the next generation of systems must have in order to successfully support such new emerging trends. Customers are being attracted to be involved in Co-innovation Networks, as - proved responsiveness and agility is expected from industry ecosystems. Renewed production systems needs to be modeled, engineered and deployed in order to achieve cost-effective solutions. BASYS conferences have been developed and organized as a forum in which to share visions and research findings for innovative sustainable and knowledge-based products-services and manufacturing models. Thus, the focus of BASYS is to discuss how human actors, emergent technologies and even organizations are integrated in order to redefine the way in which the val- creation process must be conceived and realized. BASYS 2010, which was held in Valencia, Spain, proposed new approaches in automation where synergies between people, systems and organizations need to be fully exploited in order to create high added-value products and services. This book contains the selection of the papers which were accepted for presentation at the BASYS 2010 conference, covering consolidated and emerging topics of the conference scope.

Balanced Automation Systems for Future Manufacturing Networks

Dynamics systems (living organisms, electromechanical and industrial systems, chemical and technological processes, market and ecology, and so forth) can be considered and analyzed using information and systems theories. For example, adaptive human behavior can be studied using automatic feedback control. As an illustrative example, the driver controls a car changing the speed and steering wheels using incoming information, such as traffic and road conditions. This book focuses on the most important and manageable topics in applied multivariable control with application to a wide class of electromechanical dynamic systems. A large spectrum of systems, familiar to electrical, mechanical, and aerospace students, engineers, and scholars, are thoroughly studied to build the bridge between theory and practice as well as to illustrate the practical application of control theory through illustrative examples. It is the author's goal to write a book that can be used to teach undergraduate and graduate classes in automatic control and nonlinear control at electrical, mechanical, and aerospace engineering departments. The book is also addressed to engineers and scholars, and the examples considered allow one to implement the theory in a great variety of industrial systems. The main purpose of this book is to help the reader grasp the nature and significance of multivariable control.
