## The Alternative

An eminently practical guide, *Teaching as Story Telling* shows teachers how to integrate imagination and reason into the curriculum when planning classes in social studies, language arts, mathematics, and science. In his innovative book, Kieran Egan refashions the ancient function of the storyteller with such clarity that any teacher can step into the role with confidence. Not only does Egan's book make the reader look anew at what is too often taken for granted about the ways in which children learn, it opens up a range of critical questions about our orientation to "objectives" and to either/ors when it comes to the affective and the cognitive. - Back cover.

## Teaching as Story Telling

This book explores the unique phenomenon of public alternative schools in Toronto, Canada and other large urban areas. Although schools of this kind have existed for more than a century, very little has been written about the alternative school movement. These alternatives focus more on child-centered instruction, give many students (and teachers) opportunities to organize the school differently, provide a greater voice for teachers, students, and parents, and engage students far more with experiential learning. When traditional school structures are failing to meet the needs of many children and youth, there is a rapidly growing need for information and discussion about alternatives that will encourage their talents and serve their needs. This book draws attention to the issue of alternative schooling to help make it more accessible to a wider audience.

## Alternative Schooling and Student Engagement

This text considers issues in alternative education. It looks at the issues from teaching, learning and research perspectives.

## The Handbook of Alternative Education

In a climate of increasing emphasis on testing, measurable outcomes, competition and efficiency, the real lives of children and their teachers are often neglected or are too messy and intricate to legislate and quantify. As such, curricula are designed without including the very people that compose the identities of schools. Here Clandinin takes issue with this tendency, bringing together a collection of narratives from seven writers who spent a year in an urban school, exploring the experiences and contributions of children, families, teachers and administrators. These stories show us an alternative way of attending to what counts in schools, shifting away from the school as a business model towards an idea of schools as places to engage citizenship and to attend to the wholeness of people's lives. Articulating the complex ethical dilemmas and issues that face people and schools every day, this fascinating study puts school life under the microscope raises new questions about who and what education is for.

## Composing Diverse Identities

This is a reflection on the education of teachers, written by teacher educators who discuss features of their work and the challenges facing teacher education in the 1990s. The book invites the reader

to attempt similar analyses of personal practice and development in their own teaching.; The book deals with the personal development of both new and experienced teacher educators, illustrating how strongly teacher educators are influenced by their visions and by the challenge to prove themselves in the university setting. In addition, the book examines the ways in which teacher educators have acted to promote their own professional development and study their own practices, including writing as a tool for reflection, a life-history approach to self-study, as well as a study of educative relationships with others, and the analysis of a personal return to the classroom. Finally, it takes a broader look at the professional development of teacher educators and offers a challenge to all teacher educators to consider the tension between rigour and relevance.

### Teachers Who Teach Teachers

This book aims to meet the demands on teaching and learning in the twenty-first century, and in specific, how teacher education may transform pedagogical approaches and didactic methods to support future teachers in enhancing needful skills. In particular, it focuses on the pedagogical approach of Storyline, and how a Storyline can be applied in teacher education. It argues that teacher education benefits from the potency of various disciplines while applying an interdisciplinary methodology. Storyline is a problem-based, cross-curricular approach, based on learning through an evolving narrative, created in collaboration between teacher and students. It includes a variety of didactic tools, and inclusiveness towards different learners. Using Storyline in teacher education arranges for teacher educators to integrate alternative structures, that enable interdisciplinary cooperation and topic-based teaching. The authors have incorporated Storyline in many different ways, which contextualizes throughout the book. The book provides an overview of Storyline and introduces improved and new theoretical perspectives on this approach, including many practical examples.

### Teaching through Stories

'Anyone interested in children and their education should read this'. More than 20 years ago, long before the days of the UK's government funded free schools, Rosalyn Spencer was the driving force behind the setting up of a non-fee paying 'alternative' small school. She had felt compelled to do this, not only because of the difficulties her 9 year old son was facing in mainstream education, and painful memories of her own schooling, but also because of concerns other parents had shared with her about problems their children were experiencing. Whereas the current free schools are generously funded by the government, Rosalyn opened the school with 12 children with virtually no funding at all. In this book, the first in a series of three, Rosalyn tells her personal story leading up to the opening of the small school. It demonstrates some of the failings of the education system and highlights the need for alternative approaches. Her story will appeal to childcare professionals, teachers, parents and anybody who enjoys reading memoirs and narrative non-fiction. Following its release as an ebook in March 2013 it received excellent reviews and became an Amazon Number 1 Best Seller.

### Why I Started a Small School

A ten year project in the making, Alternative Education for Parents and Teachers is a gleaning of the best and most successful teaching techniques and approaches. These practical education methods and strategies gained from years of knowledge and experience in the field work amazingly. From mainstream elementary classes to high school alternative programs for behavioral students, students with and without disabilities, here are twenty solid methods, strategies, and practices which will make the reader a better parent and/or teacher. These methods succeeded with some of the most difficult students around and they will work with most any child or student. The insights and practical ideas learned by the author through his teaching career are presented within stories and experiences which are enlightening, humorous, touching, and at times, shocking. The classrooms come alive as the reader learns with the student and understands what makes students, children, and people tick, how to effectively connect to them, and how to help them learn and grow. Pick up the book, pick a chapter, and use the practice: it will improve skills. Whether parent, teacher, or one who wants to know superior ways to help people learn, it's nearly impossible not to advance in these roles after reading Alternative Education for Parents and Teachers, and more than a few good laughs will be enjoyed along the way.

### Alternative Education for Parents and Teachers

This narrative ethnography adopts an aesthetic lens to relay the various lived experiences of a non-traditional, Midwestern public high school during its final year in its original building. Extending upon

previous research of high school dropouts, I examine how this one particular high school incorporated a self-paced curriculum with a focus on “family” to address the unique learning needs of students at risk of not graduating. By employing elements of grounded theory, narrative inquiry, and autoethnography, I share the stories of Walgut High School’s (a pseudonym) roughly sixty students as they struggle to navigate their respective roles in a dominant cultural narrative to which they’ve never felt like they belonged. Through the extensive and organic voices of the primary participants—as well as my observations of my own participation in the school culture over the course of a year—this project serves to offer insights not only into the school experiences of marginalized adolescents, but also into Walgut’s myriad successes and failures. In particular, this piece highlights the vitality of unconditionally caring or “hospitable” teachers (Derrida, 2000), while ultimately questioning the presumed utility of a high school diploma. The story concludes not by lauding the alternative mine created for Walgut’s canaries, but by questioning the purpose and stability of all scholastic minds. As American schools continue making strides to accommodate and support the complex and oftentimes contradictory needs of their students, what it means to succeed as a teacher in (and prepare teachers for) these diversified, inclusive learning spaces is growing increasingly complicated. Indeed, given the shifting paradigm of American public education, teacher preparation programs must continue to adapt their practices and philosophies in order to equip their teacher candidates with the skills needed not only to thrive but also find purpose and meaning in schools similar to this project’s Walgut. While this book doesn’t claim to offer any answers to the myriad questions concerning the future of public schools, it does endeavor to offer a springboard from which all education stakeholders can continue engaging in healthy and productive discussions of how best to prepare students (and teachers) for autonomous, democratic, curious, creative, and compassionate citizenship both in and apart from their academic communities. To this end, rather than write from a detached, traditionally academic vantage, I have sought in these pages to compose from a personal (albeit limited), passionate (albeit subjective) and participatory (albeit someone marginalized) perspective. In my pursuit of social justice for the characters of Walgut High School, I begin first by exposing my own privileged role in perpetuating injustice. Only through recognizing and naming our own demons can we ever begin to exorcize the System writ large. Thus, in this book’s lack, there is possibility; in its futility, hope.

### The Blab of the Paved

In *The Working Class: Poverty, education and alternative voices*, Ian Gilbert unites educators from across the UK and further afield to call on all those working in schools to adopt a more enlightened and empathetic approach to supporting children in challenging circumstances. One of the most intractable problems in modern education is how to close the widening gap in attainment between the haves and the have-nots. Unfortunately, successive governments both in the UK and abroad have gone about solving it the wrong way. Independent Thinking founder Ian Gilbert’s increasing frustration with educational policies that favour ‘no excuses’ and ‘compliance’, and that ignore the broader issues of poverty and inequality, is shared by many others across the sphere of education - and this widespread disaffection has led to the assembly of a diverse cast of teachers, school leaders, academics and poets who unite in this book to challenge the status quo. Their thought-provoking commentary, ideas and impassioned anecdotal insights are presented in the form of essays, think pieces and poems that draw together a wealth of research on the issue and probe and discredit the current view on what is best for children from poorer socio-economic backgrounds. Exploring themes such as inclusion, aspiration, pedagogy and opportunity, the contributions collectively lift the veil of feigned ‘equality of opportunity for all’ to reveal the bigger picture of poverty and to articulate the hidden truth that there is always another way. This book is not about giving you all the answers, however. The contributors are not telling teachers or schools leaders how to run their schools, their classroom or their relationships - the field is too massive, too complex, too open to debate and to discussion to propose ‘off-the-shelf’ solutions. Furthermore, the research referred to in this book is not presented in order to tell educators what to think, but rather to inform their own thinking and to challenge some of the dominant narratives about educating the ‘feckless poor’. This book is about helping educators to ask the right questions, and its starting question is quite simple: how can we approach the education of young people from disadvantaged backgrounds in a way that actually makes a difference for all concerned? Written for policy makers and activists as well as school leaders and educators, *The Working Class* is both a timely survey of the impact of current policies and an invaluable source of practical advice on what can be done to better support disadvantaged children in the school system. Edited by Ian Gilbert with contributions from Nina Jackson, Tim Taylor, Dr Steven Watson, Rhythmical Mike, Dr Ceri Brown, Dr Brian Male, Julia Hancock, Paul Dix, Chris Kilkenny, Daryn Egan-Simon, Paul Bateson, Sarah Pavey, Dr Matthew

McFall, Jamie Thrassivoulou, Hywel Roberts, Dr Kevin Ming, Leah Stewart, (Real) David Cameron, Sir Al Aynsley-Green, Shona Crichton, Floyd Woodrow, Jonathan Lear, Dr Debra Kidd, Will Ryan, Andrew Morrish, Phil Beadle, Jaz Ampaw-Farr, Darren Chetty, Sameena Choudry, Tait Coles, Professor Terry Wrigley, Brian Walton, Dave Whitaker, Gill Kelly, Roy Leighton, Jane Hewitt, Jarlath O'Brien, Crista Hazell, Louise Riley, Mark Creasy, Martin Illingworth, Ian Loynd, David Rogers, Professor Mick Waters and Professor Paul Clarke.

### The Working Class

*Becoming Teachers of Inner-city Students* takes on the continuing challenges of White teachers in increasingly de facto re-segregated schools of the present. Drawing on the author's eighteen years of experience as a classroom teacher and his research on White teachers of inner-city students, *Becoming Teachers* provides key discussions on professional identity for preservice teachers, professional educators, and researchers interested in diversity education or urban education. Driving at complex recognitions of race, class, culture, language, and gender as a basis for teaching and learning with diverse urban students, the author's and other White teachers' life and teaching stories move beyond prescriptive models of professional identity for preservice and professional teachers to "follow." Instead, life and teaching stories in *Becoming Teachers* demonstrate again and again that in teaching the personal is political, professional knowledges are forged in practice, and – overall – that becoming a professional teacher is a process that draws on one's experiences and inner-most convictions. *Becoming Teachers*, updating Vivian Paley's *White Teacher* and reworking Christine Sleeter's multicultural research on White teachers' race-evasive identities, moves discussions on White teacher identity toward a second wave of race-visible professional identity for White teachers in the present. James Jupp's book is an instruction on how to keep the democratic educational experiment on the workbench... – Roger Slee, Professor and Director of the Victoria Institute for Education, Diversity, and Life Long Learning at Victoria University, Melbourne James Jupp thoughtfully explicates the complexity of the social justice literature in education related to race, class, culture, language, gender and other differences in classrooms. Jupp is one of the leading scholars in education who challenges static notions of difference and opens up new curriculum spaces for a second wave of critical race work. Challenging the field to consider more nuanced possibilities that will advance social justice in the present, Jupp provides generous readings for new intercultural alliances. Jupp's *Becoming Teachers of Inner-city Students* offers a fresh understanding for those who are looking for new ways to understand teachers' lives and professional identities. – Patrick Slattery, Professor of Curriculum, Texas A&M University Jupp does the hard work, here, of understanding where we have been in conceptualizing the racial identities of White teachers. And then he does something harder. With abundant intelligence, courage, and generosity, Jupp opens up new pathways for our thinking and feeling and action. Read this book. – Timothy Lensmire, Associate Professor of Curriculum & Instruction, University of Minnesota

### Becoming Teachers of Inner-city Students

This book explores teachers' understanding of the personal and professional experiences that have informed their language teaching. The intent of the hardback edition is to bring into our professional conversations teachers' "ways of knowing" - that is, teachers' understanding of the experiences that have informed their language teaching. By making teachers' ways of knowing public, open to review, and accessible to others in this profession, this text hopes to validate, in ways afforded to other forms of scholarly work, teachers' own understanding of the activity of language teaching.

### Teachers' Narrative Inquiry as Professional Development

In *Teaching History for the Common Good*, Barton and Levstik present a clear overview of competing ideas among educators, historians, politicians, and the public about the nature and purpose of teaching history, and they evaluate these debates in light of current research on students' historical thinking. In many cases, disagreements about what should be taught to the nation's children and how it should be presented reflect fundamental differences that will not easily be resolved. A central premise of this book, though, is that systematic theory and research can play an important role in such debates by providing evidence of how students think, how their ideas interact with the information they encounter both in school and out, and how these ideas differ across contexts. Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education. The authors review research on students' historical thinking and set it in the theoretical context of mediated action--an approach that calls attention to the concrete actions that people undertake, the human

agents responsible for such actions, the cultural tools that aid and constrain them, their purposes, and their social contexts. They explain how this theory allows educators to address the breadth of practices, settings, purposes, and tools that influence students' developing understanding of the past, as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools. Beyond simply describing the factors that influence students' thinking, Barton and Levstik evaluate their implications for historical understanding and civic engagement. They base these evaluations not on the disciplinary study of history, but on the purpose of social education--preparing students for participation in a pluralist democracy. Their ultimate concern is how history can help citizens engage in collaboration toward the common good. In *Teaching History for the Common Good*, Barton and Levstik: \*discuss the contribution of theory and research, explain the theory of mediated action and how it guides their analysis, and describe research on children's (and adults') knowledge of and interest in history; \*lay out a vision of pluralist, participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students' learning; \*explore four principal "stances" toward history (identification, analysis, moral response, and exhibition), review research on the extent to which children and adolescents understand and accept each of these, and examine how the stances might contribute to--or detract from--participation in a pluralist democracy; \*address six of the principal "tools" of history (narrative structure, stories of individual achievement and motivation, national narratives, inquiry, empathy as perspective-taking, and empathy as caring); and \*review research and conventional wisdom on teachers' knowledge and practice, and argue that for teachers to embrace investigative, multi-perspectival approaches to history they need more than knowledge of content and pedagogy, they need a guiding purpose that can be fulfilled only by these approaches--and preparation for participatory democracy provides such purpose. *Teaching History for the Common Good* is essential reading for history and social studies professionals, researchers, teacher educators, and students, as well as for policymakers, parents, and members of the general public who are interested in history education or in students' thinking and learning about the subject.

### Teaching History for the Common Good

The book is centered on how major curriculum reform shapes mathematics and the professional practices of teachers. This book documents in real time the implementation of a major government numeracy programme and its receipt by trainee and new teachers. It documents the complete life span of that initiative. The account is targeted at an international readership in terms of how curriculum reform more generally shapes mathematics in schools and the practices of teachers. A key dimension of the book is an alternative view of mathematics education research in which the task of teacher development is understood at policy level where large numbers of teachers were interviewed to assess how policies were being processed through individuals. The book provides an easy and accessible commentary utilising contemporary theory to describe how such teachers reconcile their personal aspirations with the external demands they encounter in negotiating their identities as professional teachers.

### Becoming a Mathematics Teacher

In addition to establishing a solid foundation of teamwork skills, *Teaching for Results* will explain how to use the structure of co-teaching to practically and effectively implement differentiated instruction in their classrooms. This essential guide will demonstrate to readers how to use best practices in differentiated instruction in order to effectively co-manage, co-assess, co-plan, and co-instruct a diverse group of learners in any general education classroom.

### Alternative Education

*Language Teachers' Professional Knowledge Landscapes* is a collection of fourteen narratives from teachers of different languages, at different school levels, in different contexts across Australia. This volume brings together not simply language teacher stories, but also more political stories of the problems associated with school programs and contexts. Highlighted through these stories are some of the major political issues in schools that impact language teachers' work, and their students' success in sustained language study. The book is conceptually framed by the work of Clandinin and Connelly (1996) and their notion of 'levels' of stories told by teachers about their classrooms: the secret, the sacred and the cover stories. The term 'professional knowledge landscape' is used to indicate how teachers can critically situate their work, and thereby understand it better. The collection includes the stories of two outstanding primary language educators, and a story of mixed success in a rural

program in teaching the local Aboriginal language (Ngarrabul). There are stories of frustration with policy failures, particularly in supporting the learning of Asian languages. Many of the teacher narrators ask the confronting question: 'What blocks language learning in Australia?' They offer the strategies which they have developed, that they see making a difference. Other narratives offer autoethnographic tracking of careers, for example, as a teacher of Latin and Classics, Japanese, French, Spanish, Russian, and of teachers' ongoing vigour and creativity in advocacy. A number of teachers examine their own identity story for the intercultural learning, which they then offer and extend in student learning. Consistently expressed, there is the need for teachers to take up individual responsibility, while still being strongly supported by their professional community: 'It is us' who make the difference, one teacher concludes. Supported by a strong Foreword by Canadian scholar F. Michael Connelly, this ground-breaking collection of narratives represents a form of social research in providing critical illustrations of the issues needing attention for national language education enhancement. It is the only extended inquiry into language teaching in the context of an active policy initiative environment, and the first volume to address the language education landscape through the voices of active language teachers.

### Teaching for Results

The problem this project attempts to solve is to develop a workable moral education in light of the clash between religious forms of moral education and U.S. Supreme Court decisions concerning them. The concept of story and storytelling has been suggested as a unifying focus for disparate prescriptions for moral education. Several recent approaches to moral storytelling have been proposed. The approaches of William Bennett, Nel Noddings, and Herbert Kohl are among those which have attempted to combine moral education and storytelling within the last decade. Bennett is identified with other theorists whose primary concern is the moral content of a story. Noddings is identified as a process theorist, whose primary concern is the process of moral storytelling, not the content. Kohl is identified as a reflection theorist, whose approach challenges tradition in the hope of creating a more moral society. Each one of these three approaches attempts to provide a comprehensive program of moral education, but they fall short of that goal. The purpose of this project, then, is to construct a storytelling moral education program that improves upon earlier approaches. Using the three levels of moral thinking posited by R.M. Hare, a three-level approach to moral storytelling is proposed. The intuitive, critical, and meta-ethical levels of moral thinking that Hare refers to are used to frame a new, three-level, approach to moral storytelling. The three-level approach combines content, process, and reflection into a unified prescription for moral education. Thus, a more comprehensive plan for moral education through storytelling is developed, one that respects traditional forms of moral education while remaining within the parameters set by the U.S. Supreme Court.

### Teaching and Administering the High School Alternative Education Program

First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

### Language Teachers' Stories from their Professional Knowledge Landscapes

In *Composing Teacher-Research* the author provides a much needed critical look at the teacher-research movement by recounting her own experiences over the past decade. Informed by readings in a number of disciplines and by her own classroom practice, Fleischer documents the shifts and changes she made as a teacher when she took on the additional role of researcher. The book presents four case studies of classrooms and students, at both the high school and college level, focusing on the ways students see their own literacy in and out of school. Fleischer not only reproduces these case studies as they were written at various points in her journey, but provides commentary through pre- and post-scripts in which she points out particular issues of concern for those who practice classroom research: what it means to represent others' experiences, how we can create research which is at the same time ethical and pedagogically sound, how the stakes for being a teacher-researcher have changed in a postmodern world.

### Teaching Through Stories

This book is designed to give parents and teachers information on the alternative education options available in the UK. It covers three main areas: Outside the state system: small schools; Steiner Waldorf schools; Montessori schools; democratic schools and other schools with alternative philosophies  
Doing it yourself: setting up a small school or learning centre; educating at home; flexible schooling

Alternatives within the state system: how some state schools are finding different ways of working. The values, philosophies and methods of each alternative are described, including the first-hand experiences and accounts of children, teachers and parents. There are answers to common questions and useful sources of further information. This accessible and informative book is the ideal introduction for parents deciding how best to educate their children. It will be of interest to teachers looking to build their knowledge of different education philosophies.

### The Moral of the Story

Research on teacher learning has too often excluded personal development in considering professional development. This timely book argues that the development of a professional identity is inextricable from personal identity. It suggests that when teachers are given the opportunity to compose their own stories of learning within a supportive community, they can then begin to compose new narratives of identity and practice. This book is a critical tool for educators seeking to refine their teaching practice and author their own development.

### Teaching, Learning, and Loving

Provides firsthand perspectives from yoga practitioners and educators on the promises and challenges of school-based yoga programs. The yoga-in-schools movement has been gaining momentum in recent years as adult practitioners realize the benefit of yoga in their personal lives and want to share it with children and youth. As the movement has grown, so has the need to understand how yoga works and its effects on individuals, groups, and school culture. *Stories of School Yoga* brings together firsthand narratives by teachers and practitioners from diverse settings nationwide to illuminate the multifaceted work, challenges, and benefits of teaching yoga to K-12 students in public schools. The stories here supplement and reframe quantitative research in the field; demonstrate how yoga can mitigate stress and tension, particularly amid an increased focus on standardized curricula and testing; and offer lessons learned and practical insights into planning, implementing, and running these programs. Rich in detail and accessible to nonspecialists, *Stories of School Yoga* presents helpful resources and a nuanced, on-the-ground look at the yoga-in-schools movement. Andrea M. Hyde is Professor of Educational Studies at Western Illinois University. Janet D. Johnson is Professor of Secondary Education at Rhode Island College.

### Composing Teacher-Research

This book comprises the stories of twelve journeys: the road traveled by former business people, members of the military, pastors, engineers and bankers all of whom responded to the calling to become a teacher. Its purpose is to inspire others who might be contemplating a similar journey in order to transition into teaching. Career Switchers are risk takers. In many instances they leave secure and well paid jobs in order to venture into the unknown world of education and they do this so that they can make a difference in the lives of children. They become students themselves to complete the coursework, they compete with all other candidates to get hired, and they subject themselves to the challenges of teaching instead of remaining in the comfort zone of their previous career. Each of the twelve chapters tells a unique story, and the reader can rest assured that everything in each chapter is absolutely true!

### Alternative Approaches to Education

*Oral Story Telling And Teaching Mathematics* provides the first serious exploration of the role that oral storytelling can play in helping children learn mathematics. It should be of interest to those concerned with providing children with powerful mathematical and literary experiences and those concerned with multicultural education. An accompanying CD-ROM contains the full text of two epic stories plus additional worksheets and handouts.

### Teacher Narrative as Critical Inquiry

Criticisms of teacher education, the low economic and political costs of trying to reform schools by reforming teacher education, along with the difficulty of filling some teaching positions with persons certified in traditional ways, have fueled a movement to create alternative routes to teacher certification in the vast majority of states. This monograph seeks to inform the ongoing policy debate over when and for what purposes alternative certification of teachers should be employed and to develop lessons that might lead to increasing the effectiveness of both alternative certification and traditional programs.

of teacher preparation. Following an introduction, the publication consists of six articles: (1) "The Theory and Practice of Alternative Certification: Implications for the Improvement of Teaching" (Willis D. Hawley); (2) "Alternative Certification in Connecticut: Reshaping the Profession" (Traci Bliss); (3) "Alternative Certification: State Policies in the SREB (Southern Regional Education Board) States" (Lynn M. Cornett); (4) "Los Angeles Unified School District Intern Program: Recruiting and Preparing Teachers for an Urban Context" (Trish Stoddart); (5) "Teaching and Knowledge: Policy Issues Posed by Alternate Certification for Teachers" (Linda Darling-Hammond); and (6) "The Place of Alternative Certification in the Education of Teachers" (Gary D. Fenstermacher). Selected references for each chapter are included. (LL)

### Stories of School Yoga

This book draws on ideas about the nature of teaching and teacher knowledge, teacher development and school reform, and narrative as methodology for understanding the lives and work of teachers. These ideas have been elaborated over the past 20 years or so by many researchers who see storytelling as the interactive process, which constitutes the site of the production of teachers' knowledge. Narrative research makes it possible to pay attention to the wider concerns that shape the work of teaching, looking at the whole lives of teachers and other educational practitioners, and exploring those lives as embedded in multiple contexts. Listening to teachers speak about whatever most concerns them in their work, it is not surprising that we hear a wide range of different voices not only from different teachers but within the speech of any one teacher. The purpose of this book is to reflect back to the field a multidimensional, multivoiced portrayal of teaching as it is, bringing our attention to both the complexity and the possibility inherent in the work of teachers. Approaching teaching in this way, as multivoiced, allows us to hear possibilities for change and development in the stories of teachers and classrooms.

### We Switched Careers! Alternative Licensure Teachers' Journeys to the Classroom

"A well written and stimulating excursion into postmodern education. Parker's challenge to critical educational theory can, in the long run, only help the left rethink and deepen its political project." - Peter McLaren, University of California, Los Angeles. This is a book about two stories of education. In one story there is a vocabulary of means, efficiency, bureaucracy, inspection and science; in the other, one of autonomy, democracy, emancipation and action research. One is the story of positivist managerialist approaches to education, the other is the story of reflective teaching. This book displaces both of these stories. By applying the techniques of deconstruction, Stuart Parker overturns the assumptions common to both of these positions and, in doing so, jettisons some widely cherished beliefs about education, autonomy and rationality. Moving beyond current debates, this book articulates a new manifesto for education in postmodernity and highlights the implications for educational practices and institutions.

### Oral Storytelling and Teaching Mathematics

Departing radically from conventional pedagogical methods, Davis (curriculum studies, U. of British Columbia) uses such diverse fields as continental and pragmatists philosophy, enactivist thought, critical discourses, cognitive theory, evolution, and ecology to challenge the assumptions that permeate much of mathematics teaching. Annotation copyright by Book News, Inc., Portland, OR

### The Alternative Certification of Teachers

Twenty-nine collected essays represent a critical history of Shakespeare's play as text and as theater, beginning with Samuel Johnson in 1765, and ending with a review of the Royal Shakespeare Company production in 1991. The criticism centers on three aspects of the play: the love/friendship debate.

### Alternative Schools

Examines the teacher's role and the teacher's authority in postmodern academic settings.

### Teachers' Voices

A gifted teacher shares many heart wrenching, joyful, insightful adventures inside the classroom and in her personal life. On this voyage you will get an up close, personal look at her life and education in America. This journey involves the actions of friends, lovers, school administrators, teachers, parents,

children and everyday people. A teacher's destiny unfolds within the pages of this book. With story upon story; some nearly too painful to hear, but must be brought to the light of day to those that represent the day-to-day grind where progress seeps out in measurements nearly too small to measure. A gifted teacher shares many heart wrenching, joyful, insightful adventures inside the classroom and in her personal life. This journey involves the actions of friends, lovers, school administrators, teachers, parents, children and everyday people. A teacher's destiny unfolds within the pages of this book. With story upon story; some nearly too painful to hear, but must be brought to the light of day to those that represent the day-to-day grind where progress seeps out in measurements nearly too small to measure.

#### EBOOK: Reflective Teaching in the Postmodern World

In recent years there has been a massive revival of interest internationally in what story can offer to education. This book covers a range of issues at the heart of teaching history, such as the use of talk, the pitfalls of narrative as a pedagogical tool, translating curriculum content into lessons, story telling and story making. It also questions what it means to teach, the difficulties for teachers of remaining constructively critical of policy, and their own practice, during periods of national legislation and change.

#### Teaching Mathematics

If there's one thing that Americans have in common, it's that the truth we seek is constantly being obscured. We are lied to, and the lies come from many sources: the commercials we watch, the politicians who court us, and leaders like the tobacco company executives who swore that nicotine is not addictive. They come in many forms: from fabrications suggesting that our children's scores on international tests somehow define us as second-class people and from false declarations that American teachers are the cause of the nation's educational problems. Unlike Jack Nicholson's angry declaration as Colonel Jessup that "You can't handle the truth," we think you can handle the truth. But first you need to know it. Therefore, we wrote this book. It is filled with stories and essays that tell the real truth about the plight of American education. Some of the stories will make you laugh; some will make you cry. You will become angry; occasionally you'll be shocked. Each chapter reveals deep problems, but you will find no easy answers, for there are none. What you will find are bold answers that will require the fighting spirit and courage of an entire nation. You will be challenged to join a "war worth waging." Finally, we have identified the real villains, for there are villains in these tales. As the chapters undress them for you and expose their true identities, you will simultaneously be introduced to unsung heroes who teach in our nation's classrooms. By the book's end, we believe you will join us in declaring these heroes to be the cement that holds the nation together. They have never stopped teaching the skills and civility that the next generation needs to participate in and contribute to the ongoing life of our democracy. You will come to know the American schoolteacher.

#### Regendering the School Story

In *Teachers' Stories* David Thomas and his contributors present an argument for the content and process of teacher training to be enriched by the inclusion of educational biography, both general, (grounded Life Histories), and subject specific accounts, as significant ingredients to be stirred in with more formal theoretic and practical aspects of training. Creating educational biographies is one way of introducing students to critical reflection on their 'taken-for-granted' educational beliefs and values, and their origins. Though not a training manual, *Teachers' Stories* will be of interest to all teacher trainers including the new cohort of trainers - the teacher mentors. Students will also find support for their attempts to introduce, through journals, diaries or logs, their individual experiences as alternative voices to the pre-eminent discourses of the training institution. It is suggested that such opportunities are especially valuable for students and tutors where the student's background and culture provide unusually distinctive experiences with possibilities for course enrichment as well as personal development.

#### Teachers, Discourses, and Authority in the Postmodern Composition Classroom

*Alternative Approaches to Education* provides parents and teachers with information and guidance on different education options in the UK and further afield. This new and expanded edition, including additional chapters and up-to-date contact details, explains the values, philosophies and methods of a range of alternative approaches available outside and within the state system, as well as if you're 'doing it yourself'. Illustrated throughout with the first-hand experiences of children, teachers

and parents, it provides lists of useful contacts, sources of further information and answers to common questions. Together with brand new chapters on recent research and contemporary debates, and on Free Schools, it covers: Small alternative schools Steiner Waldorf education Democratic schools Alternatives in the state system Parents as change agents Setting up a Small School or Learning Centre Home-based education Flexible schooling Exploring why alternative approaches to education are needed, this accessible and informative book challenges the dominant educational orthodoxies by putting children first. It will be of interest to teachers looking to build on their knowledge of different educational approaches in order to find new ways of working. It is also an ideal introduction for parents deciding how best to educate their children.

## A Delicate Dance

Drawing on data gathered through a three-year autoethnography, *A Delicate Dance* couples the author's experiences teaching multicultural education and learning to zydeco dance in order to explore semblances of intimacy across self and other. More specifically, the book looks at semblances of intimacy embodied on the dance floor and the implications such intimacy might have for thinking about curriculum and qualitative research. This lively narrative encourages readers to consider what it might mean to envision curriculum as an embodied locale - much like zydeco dancing - where the play of epistemological forces replaces technocratic force; and where students experience the relative weight of desire, fear, and knowledge, the reciprocal touch of self and other, and the mysterious momentum of the semblance of intimacy.

## Critical Intersections In Contemporary Curriculum & Pedagogy

This volume offers a collection of scholarship that extends curricular conversations, crosses borders of praxis, and expands democratic, critical and aesthetic imaginaries toward the ends of lending momentum to the ever-present and wide-open question: What is to be done— in terms of curriculum and pedagogy— in P-12 schools, in teacher education and other higher education contexts, in communities, as well as within our own lives as teachers, leaders and learners? These chapters represent perspectives from curriculum workers/teachers/scholars/activists across theoretical landscapes and spanning a diversity of positionalities within critical intersections of power and privilege as they relate to identity, culture and curriculum as well as to social justice, schools and society.

## Curriculum Histories in Place, in Person, in Practice

This book situates the Curriculum Theory Project at Louisiana State University within a larger historical framework of curriculum work, examining the practices which have sustained this type of curricular vitality over the lifetime of the field's existence. Divided into seven parts, the authors illuminate seven practices which have sustained the scholarship, graduate programs, mentorship, and networking that have been critical to maintaining a web of international relationships. This exploration and coming together of intergenerational stories reveals a more complete and nuanced narrative of the development of curriculum theory over the last 60 years. Crucially, the project exemplifies the continuing resilience of curriculum theory despite ongoing neo-liberal aspirations to reframe education as a business. Reflecting upon the lived experiences and articulated memories of those who have participated in the project and analysis of documents collected over its 25-year history, it considers curriculum history(ies) writ large through and from this lens of practice. As such, it opens up fresh insights for cultivating the vitality and vigor of curriculum theory more broadly on an international scale and with a view to future directions for the field. It will appeal to both new and experienced scholars working across education foundations, urban education, philosophy of education, and higher education, and researchers from across history, sociology, anthropology, ethnic studies, and gender studies.

### Curriculum Studies in the United States: Present Circumstances, Intellectual Histories

Pinar documents that the field of curriculum studies in the United States is in the early stages of a second paradigm shift, this time stimulated by present political circumstances. He explains why their acceptance in contemporary scholarship signals their conceptual exhaustion and how recent work in the field begins to surpass them.

### Intellectual Advancement Through Disciplinarity

Skepticism toward disciplinarity, William F. Pinar points out, is etched deeply in the U. S. field, drawn by progressive education's efforts to reconfigure the school curriculum as child-centered and/or as focused on social reconstruction. Skepticism toward disciplinarity had also been affirmed by Bobbitt and Charters' positioning of adult activity as the organizer of the school curriculum. Add to these historical dispositions the contemporary legitimation crisis of the academic disciplines and the rage for inter-disciplinary, trans-disciplinary, post-disciplinary—anything but disciplinary—research and curriculum becomes intelligible. The intellectual labor of understanding constitutes the discipline of disciplinarity. Through the discipline of disciplinarity one contributes to the field's intellectual advancement and to one's own. Appreciating the centrality of disciplinarity to intellectual advancement requires us, Pinar argues, to replace Schwab's syntactical and substantive structures of the disciplines. Focused on methodology and the concepts research methodology generates, Schwab's schema was more appropriate to the natural and social-behavioral sciences than it is to the humanities and the arts. Pinar replaces these with two structures more appropriate to a discipline associated with the humanities and the arts and focused on the education of the public: horizontality and verticality. Explicating Spivak's notion of "planetary" to specify the structures of subjectivity these structures of disciplinarity invite, Pinar illustrates these concepts through introductions to the scholarship of Ted Aoki, Tom Barone, Mary Aswell Doll, Maxine Greene, James Henderson, Dwayne Huebner, Rita Irwin, David Jardine, Kathleen Kesson, James B. Macdonald, Janet Miller, Marla Morris, Alice Pitt, William Reynolds, John Weaver, among others. Of significance to all specializations in the broad and fragmented academic field of education, Intellectual Advancement through Disciplinarity provides the intellectual tools by means of which education scholars worldwide can participate in the complicated conversation that is internationalization in order to contribute to the intellectual sophistication of their nationally distinctive fields.

### Ideating Pedagogy in Troubled Times

We began the call for this book by asking authors to ideate on activism -to take up and seek to extend- the interbraided values from the Curriculum and Pedagogy group's espoused mission and vision, collocating activist ideologies, theoretical traditions, and practical orientations as a means of creatively, reflectively, and productively responding to the increasingly dire social moment. This moment is framed by a landscape denigrated beyond even Pinar's (2004) original declaration of the present-as-nightmare. The current, catastrophic political climate provides challenges and (albeit scant) opportunities for

curriculum scholars and workers as we reflect on past and future directions of our field, and grapple with our locations and roles as educators, researchers, practitioners, and beings in the world. These troubled times force us to think critically about our scholarship and pedagogy, our influence on educational practices in multiple registers, and the surrounding communities we claim to serve. This is where the call began: from a desire to think through modern conceptions regarding what counts as activism in the fields of education, curriculum, and pedagogy, and to consider how activist voices and enactments might emerge differently through curriculum and pedagogy writ large. A guiding source of inspiration for this book, weaving among the emerging themes between the collected manuscripts, reflections, and poems, was a passage in Sara Ahmed's (2013) book, *The Cultural Politics of Emotion*. In this passage, Ahmed works through the complicated relationship between the testimonies of pain that injustice causes, the recognition of this pain, and the potential of these wounds to move us into a different relationship with healing (p. 200). The chapters, reflections, and poems within this volume, thus, effect a collective ideation on how specific cultural politics and deleterious ideological formations – racism, colonialism, homophobia, ableism, to name only a few – persist and mobilize. The authors seek to expose and name some of these injustices, asking readers not only see and hear these experiences, but to inhabit our complicities in their promulgation. It is important to acknowledge that these named social troubles do not exist in isolation, and will enmesh, weave, wind, and entangle with one another. The section headings parallel Ahmed's (2013) own ideations: testimony, recognition, and wounds, not as a formula to follow as an activist call, or as a model for a means to a more just end, but as a way to engage in these issues as a trope of activist confrontation of readers who are, as many of our authors suggest, complicit in maintaining many of these social troubles. The chapters do not need to be read in any particular order, though the ordering of the chapters moves from the naming of social troubles, to showing how teaching, research, and theory ask us to take a more active role in recognizing and acknowledging the prevalence of these issues, and then theorizing ways to engage the wounds.

#### Encyclopedia of Teacher Education

This encyclopaedia is a dynamic and living reference that student teachers, teacher educators, researchers and professionals in the field of education with an accent on all aspects of teacher education, including: teaching practice; initial teacher education; teacher induction; teacher development; professional learning; teacher education policies; quality assurance; professional knowledge, standards and organisations; teacher ethics; and research on teacher education, among other issues. The Encyclopedia is an authoritative work by a collective of leading world scholars representing different cultures and traditions, the global policy convergence and counter-practices relating to the teacher education profession. The accent will be equally on teaching practice and practitioner knowledge, skills and understanding as well as current research, models and approaches to teacher education.

#### Liminal Spaces and Call for Praxis(ing)

*Liminal Spaces and Call for Praxis(ing)* follows the theme of the Curriculum & Pedagogy conference that highlighted issues of power, privilege, and supremacy across timelines and borders. This volume comprises of an interconnected mosaic of theoretical research and praxis. Facing the current and future challenges of corporatization of education, it becomes imperative to identify and deconstruct elements that provide more responsive and fertile ground for a research and praxis based mosaic of pedagogy. This volume includes works of those scholars who identified or worked with communities of color and/or who drew on the activist and intellectual traditions of peoples of color, third world feminism, indigenous liberation/sovereignty, civil rights, and anticolonial movements.

#### Problematizing Service-Learning

Interest in and research on civic engagement and service-learning have increased exponentially. In this rapid growth, efforts have been made to institutionalize pedagogies of engagement across both K-12 and higher education. As a result, increased positive attention has been complemented equally by well-founded critiques complicating experiential approaches' claims and questioning if institutional, financial, and philosophical commitment is warranted. A key complaint from these critical voices is the tightly woven, protective insular core in the field of service-learning. This claim is not unfounded, nor necessarily bad. Initial efforts to legitimize service-learning and other forms of community-based education required group cohesion. The concern, however, is that the initial group cohesion has led to groupthink wherein group members have avoided critical analysis and evaluation. This book aims to prevent groupthink within the field of service-learning by allowing for the examination of effective

alternatives by new voices who can serve as “critical evaluators” from within the field itself. Myriad perspectives are offered, including empirical, theoretical, practical, and community perspectives. Authors challenge preconceived notions of service-learning, who is benefited by this pedagogy, outcomes of participation and implementation, and most importantly the theoretical, conceptual, and methodological lenses through which service-learning is even considered. The book allows servicelearning’s major criticisms to be examined, challenges to be voiced, and research agendas to be laid. This book parallels service-learning’s presence and popularity across various disciplines/fields. Chapters are written from broad perspectives and are aimed to inform service-learning researchers and educators, community organizations, and policy makers who consider service-learning as a means to address civic responsibility. Authors expose theoretical and philosophical concerns circulating in the field, and often still occupying spaces on the fringe of discourse, action, and research. The book raises fundamental questions for undergraduate and graduate courses with social justice themes by considering the implications that pedagogies of engagement have on learners and communities.

#### Media, Masculinities, and the Machine

Identifying a distinctive phenomenon in today's media culture, the authors propose a new theoretical framework for understanding mediated masculinities.

#### Negotiating Difference in French Louisiana Music

Sara Le Menestrel explores the role of music in constructing, asserting, erasing, and negotiating differences based on the notions of race, ethnicity, class, and region. She discusses established notions and brings to light social stereotypes and hierarchies at work in the evolving French Louisiana music field. She also draws attention to the interactions between oppositions such as black and white, urban and rural, differentiation and creolization, and local and global. Le Menestrel emphasizes the importance of desegregating the understanding of French Louisiana music and situating it beyond ethnic or racial identifications, amplifying instead the importance of regional identity. Musical genealogy and categories currently in use rely on a racial construct that frames African and European lineage as an essential difference. Yet as the author samples music in the field and discovers ways music is actually practiced, she reveals how the insistence on origins continually interacts with an emphasis on cultural mixing and creative agency. This book finds French Louisiana musicians navigating between multiple identifications, musical styles, and legacies while market forces, outsiders’ interest, and geographical mobility also contribute to shape musicians’ career strategies and artistic choices. The book also demonstrates the decisive role of non-natives’ enthusiasm and mobility in the validation, evolution, and reconfiguration of French Louisiana music. Finally, the distinctiveness of South Louisiana from the rest of the country appears to be both nurtured and endured by locals, revealing how political domination and regionalism intertwine.

#### Culturally Responsive Methodologies

This book offers new methodologies that require the researcher to develop relationships that may enable them to intimately come to respect and know the "Other" with whom they seek to study.

#### Dissertation Abstracts International

Touring Poverty addresses a highly controversial practice: the transformation of impoverished neighbourhoods into valued attractions for international tourists. In the megacities of the Global South, selected and idealized aspects of poverty are being turned into a tourist commodity for consumption. The book takes the reader on a journey through Rocinha, a neighbourhood in Rio de Janeiro which is advertised as "the largest favela in Latin America". Bianca Freire-Medeiros presents interviews with tour operators, guides, tourists and dwellers to explore the vital questions raised by this kind of tourism. How and why do diverse social actors and institutions orchestrate, perform and consume touristic poverty? In the context of globalization and neoliberalism, what are the politics of selling and buying the social experience of cities, cultures and peoples? With a full and sensitive exploration of the ethical debates surrounding the ‘sale of emotions’ elicited by the first-hand contemplation of poverty, Touring Poverty is an innovative book that provokes the reader to think about the role played by tourism – and our role as tourists – within a context of growing poverty. It will be of interest to students of sociology, anthropology, ethnography and methodology, urban studies, tourism studies, mobility studies, development studies, politics and international relations.

## Touring Poverty

The SAGE Guide to Curriculum in Education integrates, summarizes, and explains, in highly accessible form, foundational knowledge and information about the field of curriculum with brief, simply written overviews for people outside of or new to the field of education. This Guide supports study, research, and instruction, with content that permits quick access to basic information, accompanied by references to more in-depth presentations in other published sources. This Guide lies between the sophistication of a handbook and the brevity of an encyclopedia. It addresses the ties between and controversies over public debate, policy making, university scholarship, and school practice. While tracing complex traditions, trajectories, and evolutions of curriculum scholarship, the Guide illuminates how curriculum ideas, issues, perspectives, and possibilities can be translated into public debate, school practice, policy making, and life of the general public focusing on the aims of education for a better human condition. 55 topical chapters are organized into four parts: Subject Matter as Curriculum, Teachers as Curriculum, Students as Curriculum, and Milieu as Curriculum based upon the conceptualization of curriculum commonplaces by Joseph J. Schwab: subject matter, teachers, learners, and milieu. The Guide highlights and explicates how the four commonplaces are interdependent and interconnected in the decision-making processes that involve local and state school boards and government agencies, educational institutions, and curriculum stakeholders at all levels that address the central curriculum questions: What is worthwhile? What is worth knowing, needing, experiencing, doing, being, becoming, overcoming, sharing, contributing, wondering, and imagining? The Guide benefits undergraduate and graduate students, curriculum professors, teachers, teacher educators, parents, educational leaders, policy makers, media writers, public intellectuals, and other educational workers. Key Features: Each chapter inspires readers to understand why the particular topic is a cutting edge curriculum topic; what are the pressing issues and contemporary concerns about the topic; what historical, social, political, economic, geographical, cultural, linguistic, ecological, etc. contexts surrounding the topic area; how the topic, relevant practical and policy ramifications, and contextual embodiment can be understood by theoretical perspectives; and how forms of inquiry and modes of representation or expression in the topic area are crucial to develop understanding for and make impact on practice, policy, context, and theory. Further readings and resources are provided for readers to explore topics in more details.

## The SAGE Guide to Curriculum in Education

A growing number of both established and newly developed doctoral programs are focusing on the preparation of practitioners rather than career researchers. Professional doctorates such as the Doctor of Nursing Practice (DNP), Doctor of Education (EdD), Doctor of Pharmacy (PharmD), Doctor of Professional Studies (DProf or DPS), and the Doctor of Psychology (PsyD) are, in fact, just a few of the professional doctorates being offered today. Professional doctorates are the fastest growing segment of doctoral education. The nature of the dissertation and the process of completing a dissertation can be quite different in a professional practice doctoral program but there are few resources for both students and faculty involved in completing and mentoring such dissertations. This book was written specifically for students and faculty involved in professional practice dissertation work. It addresses both the tasks and procedures that professional practice dissertations have in common with dissertations in "research" doctoral programs as well as the tasks and issues that are more common in professional practice doctoral programs. For example, negotiating entry into applied settings and securing the cooperation of practicing professionals is covered, as are alternative models for the dissertation (e.g., the "three article dissertation" or "TAD"). The book also covers tasks such as getting IRB approval for applied dissertation research conducted in the field and how to propose and carry out studies based on applied and professional models of research. This book, written by three experienced mentors of professional practice dissertation students, is the comprehensive guide for both students and faculty.

Completing a Professional Practice Dissertation

The essays in this volume bring together leading-edge scholars to illuminate the work of William E. Doll, Jr., as a key curriculum thinker of global impact, and introduce his work and influence to new generations of scholars, teachers, and students of education. Drawing on their individual contexts, contributors cover a range of topics and themes, including engagement with pragmatism, the work of John Dewey, and the inclusion of post-modern, chaos, and complexity theories to education and curriculum. Advancing our understanding and conversation of existing problems and possibilities in education, this collection serves as both an homage to Doll and a call for action and consideration of what matters in education.

Complexifying Curriculum Studies

The Handbook is intended for all researchers in education and the social sciences undergraduate students to advanced doctoral students and research faculty. Part I provides an introduction to basic quantitative research methods, including analysis and interpretation of statistical tests associated with each method. Examples of qualitative designs and mixed methods research are also included. A chapter on measurement techniques in education and the social science is provided. Part II of the Handbook includes over a 130 instruments organized under 40 topics, extracted from the research literature. Each instrument is discussed in detail concerning its measurement characteristics used in its development. A section also includes Instruments Available through Commercial Organizations, which provide the latest sources for teacher and principal evaluation. New to This Edition -Enhanced chapters concerning Quantitative research methods with analysis and interpretation of research data appropriate to each statistical test. -Detailed chapter of measurement procedures used in instrumentation development, including the appropriate application of reliability and validity tests, item analysis, and factor analysis with analysis and interpretation of research data. -Introduction to Qualitative research design and appropriate methods, and the application of mixed methods in research design. -Expanded section of actual research instruments available for measurement purposes in education and social science research. -Enhanced section including Instruments Available through Commercial Organizations. This provides the latest sources for teacher and principal evaluation.

PERSPECTIVAS INTERDISCIPLINARES EN EL ESTUDIO DE LA CULTURA Y A SOCIEDAD abarca diferentes aproximaciones al estudio de algunos problemas sociales y culturales, desde disciplinas tales como la Antropología Social y Cultural, la Sociología, el Trabajo Social, la Filosofía o las Ciencias Políticas. En este libro, catorce autores y autoras de tres países diferentes (Ecuador, EEUU y España) pertenecientes a seis instituciones de investigación (Abya Yala Universidad Politécnica Salesiana de Ecuador, Peace Operations Training Institute USA, Universidad Miguel Hernández de Elche, Universidad de Murcia, Universidad de Granada y la Agencia Estatal Consejo Superior de Investigaciones Científicas, CSIC), exponen investigaciones empíricas y debates teóricos sobre temas como la seguridad, la política, la economía, la crisis, la igualdad de género, las creencias, el trabajo, la salud, la violencia, la masculinidad, el deporte, el arte, la identidad, la lengua, el cambio sociocultural, etc. El libro se estructura en once capítulos, en los que destaca el énfasis interdisciplinar con la colaboración en algunos textos de investigadores e investigadoras de diferentes disciplinas de las ciencias sociales y humanas, o la complementación de perspectivas a través de la formación multidisciplinar de los propios autores/as.

### Perspectivas interdisciplinares en el estudio de la cultura y la sociedad

Book Review Index provides quick access to reviews of books, periodicals, books on tape and electronic media representing a wide range of popular, academic and professional interests. The up-to-date coverage, wide scope and inclusion of citations for both newly published and older materials make Book Review Index an exceptionally useful reference tool. More than 600 publications are indexed, including journals and national general interest publications and newspapers. Book Review Index is available in a three-issue subscription covering the current year or as an annual cumulation covering the past year.

### Bibliographic Index

"The barbarian rules by force; the cultivated conqueror teaches." This maxim from the age of empire hints at the usually hidden connections between education and conquest. In *Learning to Divide the World*, John Willinsky brings these correlations to light, offering a balanced, humane, and beautifully written account of the ways that imperialism's educational legacy continues to separate us into black and white, east and west, primitive and civilized.

### Book Review Index - 2009 Cumulation

This comprehensive text is the first to introduce evocative autoethnography as a methodology and a way of life in the human sciences. Using numerous examples from their work and others, world-renowned scholars Arthur Bochner and Carolyn Ellis, originators of the method, emphasize how to connect intellectually and emotionally to the lives of readers throughout the challenging process of representing lived experiences. Written as the story of a fictional workshop, based on many similar sessions led by the authors, it incorporates group discussions, common questions, and workshop handouts. The book: describes the history, development, and purposes of evocative storytelling; provides detailed instruction on becoming a story-writer and living a writing life; examines fundamental ethical issues, dilemmas, and responsibilities; illustrates ways ethnography intersects with autoethnography; calls attention to how truth and memory figure into the works and lives of evocative autoethnographers.

### Learning to Divide the World

What is tango? Dance, music, and lyrics of course, but also a philosophy, a strategy, a commodity, even a disease. This book explores the politics of tango, tracing tango's travels from the brothels of Buenos Aires to the cabarets of Paris and the shako dansu clubs of Tokyo. The author is an Argentinean political theorist and a dance professor at the University of California at Riverside. She uses her ?tango tongue? to tell interwoven tales of sexuality, gender, race, class, and national identity. Along the way she unravels relations between machismo and colonialism, postmodernism and patriarchy, exoticism and commodification. In the end she arrives at a discourse on decolonization as intellectual ?unlearning. ?Marta Savigliano's voice is highly personal and political. Her account is at once about the exoticization of tango and about her own fate as a Third World woman intellectual. A few sentences from the preface are indicative: ?Tango is my womb and my tongue, a trench where I can shelter and resist the colonial invitations to "'universalism,'? a stubborn fatalist mood when technocrats and theorists

offer optimistic and seriously revised versions of 'alternatives' for the Third World, an opportunistic metaphor to talk about myself and my stories as a success' of the civilization-development-colonization of Am ca Latina, and a strategy to figure out through the history of the tango a hooked-up story of people like myself. Tango is my changing, resourceful source of identity. And because I am where I am?outside?tango hurts and comforts me: ''Tango is a sad thought that can be danced.'?Savigliano employs the tools of ethnography, history, body-movement analysis, and political economy. Well illustrated with drawings and photos dating back to the 1880s, this book is highly readable, entertaining, and provocative. It is sure to be recognized as an important contribution in the fields of cultural studies, performance studies, decolonization, and women-of-color feminism.

### Evocative Autoethnography

This innovative book places the sensory experiences of autistic individuals within a sociological framework. It instigates new discussions around sensory experience, autism and how disability and ability can be reconceived. Autism is commonly understood to involve social and communication difficulties. Less commented upon is the sensory challenges faced by those with autism. Sociology is no different, focusing on communication and neglecting the sensory dimensions of experience. Sensory experiences and relations are central to how we understand and navigate through the natural and social worlds, and mediate our interactions with other people, objects and spaces. In this book, the author explores how these processes are affected by the favourite activities of autistic people. With real-life case studies and cutting-edge research, this book will be useful to students, autistic people, advocates and carers, disability studies researchers and sociologies of disability and the senses.

### Tango And The Political Economy Of Passion

"Dave King and Richard Ekins are the leading world sociologists in this field. The book brings together a brilliant synthesis of history, case studies, ideas and positions as they have emerged over the past thirty years, and brings together a rich but always grounded account of this field, providing a state of the art of critical concepts and ideas to take this field further during the twenty first century." - Ken Plummer, University of Essex "An outstanding survey of the evolution of trans phenomena, splendidly written, highly informative, scholarly at its best, yet easy to read even for those neither trans nor sociologist. Ekins and King, experts in the field, unroll the panoramas of sex, gender, and transgenering that have evolved during the last decades. For everyone wanting to understand the interaction of women and men and of those who cannot or will not identify with either of these two categories, reading this book is a must, and a real pleasure." - Friedmann Pfaefflin, University of ULM This groundbreaking study sets out a framework for exploring transgender diversity for the new millennium. It sets forth an original and comprehensive research and provides a wealth of vivid illustrative material. Based on two decades of fieldwork, life history work, qualitative analysis, archival work and contact with several thousand cross-dressers and sex-changers around the world, the authors distinguish a number of contemporary transgenering 2stories2 to illustrate: The binary male/female divide The interrelations between sex, sexuality and gender The interrelations between the main sub-processes of transgenering. Wonderfully insightful, The Transgender Phenomenon develops an original and innovative conceptual framework for understanding the full range of the transgender experience.

### A Sensory Sociology of Autism

Duoethnography is a collaborative research methodology in which two or more researchers engage in a dialogue on their disparate histories in a given phenomenon. Their goal is to interrogate and re-conceptualize existing beliefs through a conversation that is written in a play-script format. The methodology of duoethnography serves as the focus of this book. Duoethnography facilitates stratified, nested, auto-ethnographic accounts of a given research context or question, designed to emphasize the complex, reflexive, and aesthetic aspects of both the work in process and the product. As a curriculum and a research method, duoethnography explores two seminal issues: representation in qualitative research (how to represent findings when findings are created within a dynamic phenomenological text), and praxis (how research contributes to a sense of personal change). Duoethnography allows researchers to explore their hybrid identities and to see how their lives have been situated socially and culturally. Recent duoethnographic studies have examined a range of topics, including forms of institutionalized racism, beauty, post-colonialism, multicultural identity construction, and professional boundaries between patient and practitioner in mental health professions.

## The Transgender Phenomenon

American students vary in educational achievement, but white students in general typically have better test scores and grades than black students. Why is this the case, and what can school leaders do about it? In *The Color of Mind*, Derrick Darby and John L. Rury answer these pressing questions and show that we cannot make further progress in closing the achievement gap until we understand its racist origins. Telling the story of what they call the Color of Mind—the idea that there are racial differences in intelligence, character, and behavior—they show how philosophers, such as David Hume and Immanuel Kant, and American statesman Thomas Jefferson, contributed to the construction of this pernicious idea, how it influenced the nature of schooling and student achievement, and how voices of dissent such as Frederick Douglass, Frances Ellen Watkins Harper, and W. E. B. Du Bois debunked the Color of Mind and worked to undo its adverse impacts. Rejecting the view that racial differences in educational achievement are a product of innate or cultural differences, Darby and Rury uncover the historical interplay between ideas about race and American schooling, to show clearly that the racial achievement gap has been socially and institutionally constructed. School leaders striving to bring justice and dignity to American schools today must work to root out the systemic manifestations of these ideas within schools, while still doing what they can to mitigate the negative effects of poverty, segregation, inequality, and other external factors that adversely affect student achievement. While we cannot expect schools alone to solve these vexing social problems, we must demand that they address the dignitary injustices associated with how we track, discipline, and deal with special education that reinforce long-standing racist ideas. That is the only way to expel the Color of Mind from schools, close the racial achievement gap, and afford all children the dignity they deserve.

## Duoethnography

Senegal has played a central role in contemporary dance due to its rich performing traditions, as well as strong state patronage of the arts, first under French colonialism and later in the postcolonial era. In the 1980s, when the Senegalese economy was in decline and state funding withdrawn, European agencies used the performing arts as a tool in diplomacy. This had a profound impact on choreographic production and arts markets throughout Africa. In Senegal, choreographic performers have taken to contemporary dance, while continuing to engage with neo-traditional performance, regional genres like the sabar, and the popular dances they grew up with. A historically informed ethnography of creativity, agency, and the fashioning of selves through the different life stages in urban Senegal, this book explores the significance of this multiple engagement with dance in a context of economic uncertainty and rising concerns over morality in the public space.

## The Color of Mind

From the ivory tower to the barricades! Radical intellectuals explore the relationship between research and resistance.

## Dance Circles

Why do some therapeutic conversations go well but not others? We all have prejudices and assumptions which influence how we describe the world and how we conduct our conversations with others. Therapists' own narratives can sometimes impede, rather than facilitate, effective therapeutic processes, with far-reaching effects on clients' lives. This unique and important book describes how self-reflexive practices can lead to more ethically responsible, collaborative and life-enhancing conversations. Drawing on her many years' clinical experience, Fran Hedges explores self-reflexive practice in action, offering the reader a set of skills for assessing their own personal resources and stories and unpacking their professional belief systems. Each chapter: - describes a single extended case study in psychotherapy as a source of analysis and illumination - focuses on a particular theme, from the importance of language and emotion to the often-neglected significance of bodily responses. - interweaves theory with self-reflection to offer a compelling blend of critical, conceptual and personal material. This stimulating, innovative and practical book will appeal to trainee counsellors, psychotherapists and psychologists as well as experienced mental health practitioners and supervisors who are looking for ways to invigorate and enhance their practice.

## Constituent Imagination

Our political age is characterized by forms of description as 'big' as the world itself: talk of 'public knowledge' and 'public goods,' 'the commons' or 'global justice' create an exigency for modes of governance that leave little room for smallness itself. Rather than question the politics of adjudication between the big and the small, this book inquires instead into the cultural epistemology fueling the aggrandizement and miniaturization of description itself. Incorporating analytical frameworks from science studies, ethnography, and political and economic theory, this book charts an itinerary for an internal anthropology of theorizing. It suggests that many of the effects that social theory uses today to produce insights are the legacy of baroque epistemological tricks. In particular, the book undertakes its own *trompe l'oeil* as it places description at perpendicular angles to emerging forms of global public knowledge. The aesthetic 'trap' of the *trompe l'oeil* aims to capture knowledge, for only when knowledge is captured can it be properly released.

### Nordic Larp

It sounds like a paradox: How do you engage in autoethnography collaboratively? Heewon Chang, Faith Ngunjiri, and Kathy-Ann Hernandez break new ground on this blossoming new array of research models, collectively labeled Collaborative Autoethnography. Their book serves as a practical guide by providing you with a variety of data collection, analytic, and writing techniques to conduct collaborative projects. It also answers your questions about the bigger picture: What advantages does a collaborative approach offer to autoethnography? What are some of the methodological, ethical, and interpersonal challenges you'll encounter along the way? Model collaborative autoethnographies and writing prompts are included in the appendixes. This exceptional, in-depth resource will help you explore this exciting new frontier in qualitative methods.

### Reflexivity in Therapeutic Practice

This edited book is for relationally reflexive practitioners who want to research practice with inspiring innovative research methodology and research in ways which reflect the sensitivity, creativity, values and practices from their everyday working lives. The chapters offer practical and theoretical help in forging connections between relationally sensitive practice, reflexive inquiry and the wider field of post-positivist qualitative inquiry. Reflexivity weaves systemic social constructionist, collaborative dialogical and narrative practices in the fields of therapy, consultation, teaching, supervision, leadership, organisational development, community work and activism. Mary Gergen - Foreword Part 1 - Systemic Methodology Gail Simon - Systemic Inquiry as a form of Qualitative Inquiry Alex Chard - Orientations: Systemic Approaches to Researching Practice Harlene Anderson - Collaborative-Dialogue Based Research as Everyday Practice: Questioning our Myths Sheila McNamee - Research as Relational Practice. Exploring Modes of Inquiry John Shotter - Methods for Practitioners in Inquiring into "the Stuff" of Everyday Life and its Continuous Co-Emergent Development Part 2 - Innovations in Systemic Inquiry Vikki Reynolds - A Solidarity Approach: The Rhizome & Messy Inquiry Saliha Bava - Performative Practices, Performative Relationships - in and as Emergent Research Jacob Storch & Karina Solso - Reporting from inside the emerging process of becoming research consultants Lisen Kebbe - Writing Essays as Dialogical Inquiry Kevin Barge, Carsten Hornstrup & Rebecca Gill - Conversational Reflexivity and Researching Practice Ann-Margreth Olsson - The Impact of Dialogical Participatory Action Research (DPAR). Riding in the peloton of dialogical collaboration Andreas Juhl - Pragmatic inquiry as a research method for knowledge creation in organisations Christine Oliver - Using Coordinated Management of Meaning to Define Systemic Reflexivity as a Research Position Sally St George & Dan Wulff - Research as Daily Practice Ann L Cunliffe, Professor of Organization Studies, University of Bradford, UK "This book connects research, relationships and ethics in a thoughtful and meaningful way. For anyone interested in taking a systemic constructionist perspective to researching and theorizing practice, the book is a great resource, offering practical guides, a range of methods, along with helpful examples from the experience of authors who are carrying out research in a variety of contexts. What is also important is that each chapter illustrates the 'realities' of doing research - that inquiry is not the structured, de-humanised process many research methods books convey. Instead, it is often a messy, challenging, reflexive and ultimately rewarding experience." Peter Lang and Susan Lang, Systemic Founders of KCC, London, UK "Here is a comprehensive bringing together of thoughts and practices involved in creating knowledge through doing systemic social constructionist research. A rich and inspiring resource for the practitioner. Travel in and enjoy your research activity " Frank J. Barrett, author "Yes to the Mess: Surprising Leadership Lessons from Jazz" "This collection is a hopeful reminder that reflexive research can be a powerful and transformative intervention in social life. What an exciting and important book " Peter Stratton, Emeritus Professor of Family Therapy, University of

Leeds, UK "This important book has assembled leading thinkers and researchers to usher in greater coherence to the imaginative thinking that has emerged as the postmodern social constructionist shift is applied to practitioner research."

## An Anthropological Trompe L'Oeil for a Common World

### Publisher description

#### Collaborative Autoethnography

Explores the spiritual dimension of education, and discusses ways to nourish the spiritual development of adolescents in public schools without violating anyone's legal rights.

#### Systemic Inquiry
