World Cultures

Content emphasis of this text is on global interdependence, cultural diffusion, and diversity, with the day-to-day lives of real people through-out the globe as a focus. Secondary level.

World Cultures

(High School) World Cultures: A Global Mosaic fosters an understanding of diverse cultural traditions through an engaging narrative and a strong humanities strand. Regional units use the day-to-day lives of real people as a framework for understanding the importance of each region's geography, history and traditions, economics and daily life, and literature and the arts, as well as the role of the region in the world today.

World Cultures

How have school curricula been affected by the ripple effects of globalization? How do teachers and students attempt to understand their complex world? Most states require world teaching in some form, yet little is known about how teachers and students engage in this critical curricular area. World Class: Teaching and Learning in Global Times directly fills this need by providing a detailed, inside look at global education in three high schools. The data from the study, drawn from extensive interviews and observations, illustrate the daily challenges and complexities of global teaching and learning. Comprehensive yet scholarly, this volume: *raises thought-provoking questions for both theorists and practitioners; *addresses controversial issues embedded in global education and throughout the social studies curriculum, such as the tension between universalism and cultural relativism, the problematic nature of identity in classroom discourse, and the apparent duality of national and global loyalties; *connects issues particular to global education with wider scholarship in education; *examines the interplay of theory and practice in global education and, more broadly, the social sciences; and *provides an exploratory and provocative look at dimensions of global civics, with an analysis of the events of 9/11/01 and how they have shaped global perspectives about living as one planet. The book is organized in three parts--contexts, problems, and alternatives. Contexts allows readers

to consider global education from multiple perspectives: teacher, student, administrator, community member, and scholar. Problems focuses on pedagogical challenges associated with global education. Alternatives provides reflection points that encourage readers to consider different ways we might converse about global teaching and learning. Written for scholars, practitioners, and students in social studies, curriculum and instruction, global/multicultural education, and related fields, *World Class: Teaching and Learning in Global Times* is an excellent text for preservice and graduate-level courses in these areas.

World Class

Against the background of globalization and campaigns to provide basic education for all the world's children, *Culture and Pedagogy* compares primary and elementary schooling in England, France, India, Russia and the United States. It explores the ways in which children's educational experiences are shaped not just by classroom circumstances and the decisions of the teacher, but also by school values and organization, by local pressures, national policies and political control and – suffusing all these – by culture and history. *Culture and Pedagogy* combines comparative and historical enquiry with intensive analysis of school and classroom life to present a novel and illuminating account of pedagogy. The book also transfers into the international arena themes for which the author's earlier work is well known: the interplay of policy, politics and practice; the quest for resilient models of teaching and learning the subtle dynamics of schools and classrooms; and the rich learning potential of talk between teachers and children; and the challenge of judging 'good' and 'effective' educational practice. *Culture and Pedagogy* is clearly structured around three levels of analysis: systems, school and classrooms. Extensively illustrated with figures, tables, photographs, lesson summaries and teaching extracts, the book is an essential resource for those who are committed to understanding pedagogy, exploring culture, and improving primary education.

Arab World Mosaic

Teachers spend much of their time on assessment, yet many higher education teachers have received minimal guidance on assessment design and marking. This means assessment can often be a source of stress and frustration. *Assessment and Feedback in Higher Education* aims to solve these problems. Offering a concise overview of assessment theory and practice, this guide provides teachers with the help they need.

Culture and Pedagogy

Do virtual museums really provide added value to end-users, or do they just contribute to the abundance of images? Does the World Wide Web save endangered cultural heritage, or does it foster a society with less variety? These and other related questions are raised and answered in this book, the result of a long path across the digital heritage landscape. It provides a comprehensive view on issues and achievements in digital collections and cultural content.

Assessment and Feedback in Higher Education: A Guide for Teachers

Is it possible to bring university research and student education into a more connected, more symbiotic relationship? If so, can we develop programmes of study that enable faculty, students and 'real world' communities to connect in new ways? In this accessible book, Dilly Fung argues that it is not only possible but also potentially transformational to develop new forms of research-based education. Presenting the Connected Curriculum framework already adopted by UCL, she opens windows onto new initiatives related to, for example, research-based education, internationalisation, the global classroom, interdisciplinarity and public engagement. *A Connected Curriculum for Higher Education* is, however, not just about developing engaging programmes of study. Drawing on the field of philosophical hermeneutics, Fung argues how the Connected Curriculum framework can help to create spaces for critical dialogue about educational values, both within and across existing research groups, teaching departments and learning communities. Drawing on vignettes of practice from around the world, she argues that developing the synergies between research and education can empower faculty members and students from all backgrounds to contribute to the global common good.

eCulture

Written in a detailed and fascinating manner, this book is ideal for general readers interested in the English language.

A Connected Curriculum for Higher Education

The 'knowledge turn' in curriculum studies has drawn attention to the central role that knowledge of the disciplines plays in education, and to the need for new thinking about how we understand knowledge and knowledge-building. *Knowing History in Schools* explores these issues in the context of teaching and learning history through a dialogue between the eminent sociologist of curriculum Michael Young, and leading figures in history education research and practice from a range of traditions and contexts. With a focus on Young's 'powerful knowledge' theorisation of the curriculum, and on his more recent articulations of the 'powers' of knowledge, this dialogue explores the many complexities posed for history education by the challenge of building children's historical knowledge and understanding. The book builds towards a clarification of how we can best conceptualise knowledge-building in history education. Crucially, it aims to help history education students, history teachers, teacher educators and history curriculum designers navigate the challenges that knowledge-building processes pose for learning history in schools.

English as a Global Language

The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

Knowing History in Schools

From its foundation in 1826, UCL embraced a progressive and pioneering spirit. It was the first university in England to admit students regardless of religion and made higher education affordable and accessible to a much broader section of society. It was also effectively the first university to welcome women on equal terms with men. From the outset UCL showed a commitment to innovative ideas and new methods of teaching and research. This book charts the history of UCL from 1826 through to the present day, highlighting its many contributions to society in Britain and around the world. It covers the expansion of the university through the growth in student numbers and institutional mergers. It documents shifts in governance throughout the years and the changing social and economic context in which UCL operated, including challenging periods of reconstruction after two World Wars. Today UCL is one of the powerhouses of research and teaching, and a truly global university. It is currently seventh in the QS World University Rankings. This completely revised and updated edition features a new chapter based on interviews with key individuals at UCL. It comes at a time of ambitious development for UCL with the establishment of an entirely new campus in East London, UCL East, and Provost Michael Arthur's 'UCL 2034' strategy which aims to secure the university's long-term future and commits UCL to delivering global impact.

What Should Schools Teach?

The Mosaic approach views children as 'experts in their own lives', and offers a creative framework for listening to young children's perspectives. At a time of shifting policy in early years, this second edition offers a timely reminder that listening to young children is still important for reviewing service provision. The Mosaic approach has been applied by practitioners throughout the world. This new edition reflects on the authors' original ground-breaking work, with new introductions, updates and

examples of how the Mosaic approach has been adapted, and offers case studies that will encourage practitioners to use the framework in their own setting. It will be of interest to policy makers, practitioners in nurseries, children's centres, pre-schools and schools and residential settings. It will also be welcomed by early childhood students and other researchers who are engaged in searching for new theoretical, practical and imaginative ways of listening to young children.

The World of UCL

This book identifies the many facets of culture that influence second language learners and teachers. The paperback edition identifies the many facets of culture that influence second language learners and teachers. It addresses the impact of culture on learning to interact, speak, construct meaning, and write in a second language, while staying within the sociocultural paradigms specific to a particular language and its speakers. By providing a comprehensive introduction to research from other disciplines on the interaction between language and culture, this volume offers an important contribution to the field of second language acquisition.

Listening to Young Children

How and Why to Read and Create Children's Digital Books outlines effective ways of using digital books in early years and primary classrooms, and specifies the educational potential of using digital books and apps in physical spaces and virtual communities. With a particular focus on apps and personalised reading, Natalia Kucirkova combines theory and practice to argue that personalised reading is only truly personalised when it is created or co-created by reading communities. Divided into two parts, Part I suggests criteria to evaluate the educational quality of digital books and practical strategies for their use in the classroom. Specific attention is paid to the ways in which digital books can support individual children's strengths and difficulties, digital literacies, language and communication skills. Part II explores digital books created by children, their caregivers, teachers and librarians, and Kucirkova also offers insights into how smart toys, tangibles and augmented/virtual reality tools can enrich children's reading for pleasure. How and Why to Read and Create Children's Digital Books is of interest to an international readership ranging from trainee or established teachers to MA level students and researchers, as well as designers, librarians and publishers. All are inspired to approach children's reading on and with screens with an agentic perspective of creating and sharing. Praise for How and Why to Read and Create Children's Digital Books 'This is an exciting and innovative book – not least because it is freely available to read online but because its origins are in primary practice. The author is an accomplished storyteller, and whether you know, as yet, little about the value of digital literacy in the storymaking process, or you are an accomplished digital player, this book is full of evidence-informed ideas, explanations and inspiration.' Liz Chamberlain, Open University 'At a time when children's reading is increasingly on-screen, many teachers, parents and carers are seeking practical, straightforward guidance on how to support children's engagement with digital books. This volume, written by the leading expert on personalised e-books, is packed with app reviews, suggestions and insights from recent international research, all underpinned by careful analysis of digital book features and recognition of reading as a social and cultural practice. Providing accessible guidance on finding, choosing, sharing and creating digital books, it will be welcomed by those excited by the possibilities of enthusing children about reading in the digital age.' Cathy Burnett, Professor of Literacy and Education, Sheffield Hallam University

The Mosaic of Learning

Forging closer links between university research and teaching has become an important way to enhance the quality of higher education across the world. As student engagement takes centre stage in academic life, how can academics and university leaders engage with their students to connect research and teaching more effectively? In this highly accessible book, the contributors show how students and academics can work in partnership to shape research-based education. Featuring student perspectives, it offers academics and university leaders practical suggestions and inspiring ideas on higher education pedagogy, including principles of working with students as partners in higher education, connecting students with real-world outputs, transcending disciplinary boundaries in student research activities, connecting students with the workplace, and innovative assessment and teaching practices. Written and edited in full collaboration with students and leading educator-researchers from a wide spectrum of academic disciplines, this book poses fundamental questions about learning and learning communities in contemporary higher education.

Culture in Second Language Teaching and Learning

Religious and computer columnist Mark Kellner begins with an overview of the Internet and various online services and moves on to more detailed descriptions of religious resources available on each service. This book explains where to find everything from the Book of Mormon online to a tour of the Vatican's artwork. Interspersed throughout the book are examples of how people use the Internet for religious experiences.

How and Why to Read and Create Children's Digital Books

This edited book examines cultures of learning from the perspectives of education, applied linguistics and language learning. The concept can be used to explore socio-cultural features of language learning and use contexts in educational institutions, and cultural practices of pedagogic activities and classroom interaction.

Shaping Higher Education with Students

In *Intercultural Communication*, the authors draw on their deep intercultural experience to show us how to build successful communication bridges across diverse cultures. The book explores various theoretical positions on global communication ethics and norms by providing an overview of the contemporary socio-cultural situation and seeking ways in which common ground may be found between these different positions. The authors raise points of critical reflection on intercultural events and issues in various areas of communication including health, work, environment and education. The book also covers a range of issues, from the interactions of various cultures to the expansion of social organizations and the growing global infrastructure.

God on the Internet

This book is written for teachers, researchers, and theorists who have grown up in a world radically different from that of the students they teach and study. It considers the possibilities involved in teaching critical media literacy using popular culture, and explore what such teaching might look like in your classroom. Published by International Reading Association

Researching Cultures of Learning

Early childhood education and care has been a political priority in England since 1997, when government finally turned its attention to this long-neglected area. Public funding has increased, policy initiatives have proliferated and at each general election political parties aim to outbid each other in their offer to families. *Transforming Early Childhood in England: Towards a Democratic Education* argues that, despite this attention, the system of early childhood services remains flawed and dysfunctional. National discourse is dominated by the cost and availability of childcare at the expense of holistic education, while a hotchpotch of fragmented provision staffed by a devalued workforce struggles with a culture of targets and measurement. With such deep-rooted problems, early childhood education and care in England is beyond minor improvements. In the context of austerity measures affecting many young families, transformative change is urgent.

Intercultural Communication

First published in 1917 as 'Midwifery', *Obstetrics by Ten Teachers* is well established as a concise, yet comprehensive, guide within its field. The twentieth edition has been thoroughly updated by a new team of 'teachers', integrating clinical material with the latest scientific developments that underpin patient care. Each chapter is highly structured, with learning objectives, definitions, aetiology, clinical features, investigations, treatments, case histories and key point summaries and additional reading where appropriate. New themes for this edition include 'professionalism' and 'global health' and information specific to both areas is threaded throughout the text. Along with its companion *Gynaecology by Ten Teachers* the book will continue to provide an accessible 'one stop shop' in obstetrics and gynaecology for a new generation of doctors.

OERI Bulletin

This report analyses all aspects of cultural diversity, which has emerged as a key concern of the international community in recent decades, and maps out new approaches to monitoring and shaping the changes that are taking place. It highlights, in particular, the interrelated challenges of cultural diversity and intercultural dialogue and the way in which strong homogenizing forces are matched by

persistent diversifying trends. The report proposes a series of ten policy-oriented recommendations, to the attention of States, intergovernmental and non-governmental organizations, international and regional bodies, national institutions and the private sector on how to invest in cultural diversity. Emphasizing the importance of cultural diversity in different areas (languages, education, communication and new media development, and creativity and the marketplace) based on data and examples collected from around the world, the report is also intended for the general public. It proposes a coherent vision of cultural diversity and clarifies how, far from being a threat, it can become beneficial to the action of the international community.

Popular Culture in the Classroom

"The impressive and stimulating essays in *Bridging Transcultural Divides* deal with the cultural and educational issues in the Australian context. (...) The book's central message is that education for Asian students in Australia, and more broadly in the West, can no longer be seen as a one-way transfer of knowledge, but must be understood as a process of reciprocal learning in which both teachers and students are changed by the experience." - Prof. Tim Wright, University of Sheffield.

College & Research Libraries News

Globalisation has caused an increase in the amount of cultural mingling. For some people diversity is seen as richness but for others there have been problems of identity and hence conflict. This world survey looks at the current debates, cultural policies, national identity and methods of measuring culture. It is backed up by statistical tables and cultural indicators and includes a CD-ROM of cultural resources on the Web.

Transforming Early Childhood in England:

The Millennium Dome, Braveheart and Rolls Royce cars. How do cultural icons reproduce and transform a sense of national identity? How does national identity vary across time and space, how is it contested, and what has been the impact of globalization upon national identity and culture? This book examines how national identity is represented, performed, spatialized and materialized through popular culture and in everyday life. National identity is revealed to be inherent in the things we often take for granted - from landscapes and eating habits, to tourism, cinema and music. Our specific experience of car ownership and motoring can enhance a sense of belonging, whilst Hollywood blockbusters and national exhibitions provide contexts for the ongoing, and often contested, process of national identity formation. These and a wealth of other cultural forms and practices are explored, with examples drawn from Scotland, the UK as a whole, India and Mauritius. This book addresses the considerable neglect of popular cultures in recent studies of nationalism and contributes to debates on the relationship between 'high' and 'low' culture.

Obstetrics by Ten Teachers

Rather than embracing difference as a reflection of wider society, academic ecosystems seek to normalise and homogenise ways of working and of being a researcher. As a consequence, ableism in academia is endemic. However, to date no attempt has been made to theorise experiences of ableism in academia. *Ableism in Academia* provides an interdisciplinary outlook on ableism that is currently missing. Through reporting research data and exploring personal experiences, the contributors theorise and conceptualise what it means to be/work outside the stereotypical norm. The volume brings together a range of perspectives, including feminism, post-structuralism, such as Derridean and Foucauldian theory, crip theory and disability theory, and draw on the width and breadth of a number of related disciplines. Contributors use technicism, leadership, social justice theories and theories of embodiment to raise awareness and increase understanding of the marginalised; that is those academics who are not perfect. These theories are placed in the context of neoliberal academia, which is distant from the privileged and romanticised versions that exist in the public and internalised imaginations of academics, and used to interrogate aspects of identity, aspects of how disability is performed, and to argue that ableism is not just a disability issue. This timely collection of chapters will be of interest to researchers in Disability Studies, Higher Education Studies and Sociology, and to those researching the relationship between theory and personal experience across the Social Sciences.

Investing in Cultural Diversity and Intercultural Dialogue

Backpacker brings the outdoors straight to the reader's doorstep, inspiring and enabling them to go more places and enjoy nature more often. The authority on active adventure, Backpacker is the world's first GPS-enabled magazine, and the only magazine whose editors personally test the hiking trails, camping gear, and survival tips they publish. Backpacker's Editors' Choice Awards, an industry honor recognizing design, feature and product innovation, has become the gold standard against which all other outdoor-industry awards are measured.

Bridging Transcultural Divides

I waited with great anticipation to receive Jon Prosser's book, *School Culture*. The wait was worth it and I wasn't to be disappointed... This is a fine book bringing to a reader a credible and solid set of work - Youth and Policy - The most helpful book on genuine school improvement that I have ever read - LDR National College for School Leadership - Jon Prosser has put together an eclectic volume. *School Culture* is not isolated from out of school forces, most of the authors argue. Jon Prosser and Terry Warbuton's piece analyzing the visual representation of schools and teaching shows this in a looking-glass manner. The different chapters challenge us to think again about what we mean by ethos and atmosphere. What the volume demonstrates is just how difficult and challenging it is to define what constitutes a school's culture - Journal of Education for Teaching School culture is today one of the most important themes in education and educational research. This book draws on a wide range of contemporary perspectives to provide an insight into the key issues and concepts which underpin school culture. The first part of the book is concerned with culture as an holistic concept. The second part adopts the stance that school culture is the sum of its subcultures. The contributors focus on significant groups such as teachers and students, or theme, for example sexuality, and examine in depth the nature and character of schooling.

The Nation

Multicultural education is a set of strategies and materials in education, developed to assist teachers in promoting democracy while responding to the many issues created by the rapidly changing demographics of their students. Multicultural education means to ensure the highest levels of academic achievement for all students: it helps students develop a positive self-concept by providing knowledge about the histories, cultures, and contributions of diversity groups. *Multicultural Education: From Theory to Practice* - which includes the contributions of academics and researchers from two continents and 14 culturally-challenged countries - aims to provide a platform for multicultural education researchers to present new research and developments in the area. The contributors to the book approach the foundations of multicultural education, the political context of multicultural education, classroom practices in multicultural education, and language education in a multicultural context. This volume will appeal to a wide range of academic readership, including educators, researchers, social students, teacher trainers, and teachers of all subjects and of all levels, who wish to develop personally and professionally. It will also be useful to all those who interact, one way or another, with both students and teachers in a multicultural context.

The Grammar of Ornament

This book examines the inter-relationship between music learning and teaching, and culture and society: a relationship that is crucial to comprehend in today's classrooms. The author presents case studies from diverse music learning and teaching contexts - including South India and Australia and online learning environments - to compare the modes of transmission teachers use to share their music knowledge and skills. It is imperative to understand the ways in which culture and society can in fact influence music teachers' beliefs and experiences: and in understanding, there is potential to improve intercultural approaches to music education more generally. In increasingly diverse schools, the author highlights the need for culturally appropriate approaches to music planning, assessment and curricula. Thus, music teachers and learners will be able to understand the diversity of music education, and be encouraged to embrace a variety of methods and approaches in their own teaching. This inspiring book will be of interest and value to all those involved in teaching and learning music in various contexts.

World Culture Report 2000

National Advisory Committee on Creative and Cultural Education was established in 1998 "to make recommendations to the Secretaries of State on the creative and cultural development of young people through formal and informal education: to take stock of current provision and to make proposals for principles, policies and practice" (-- p. 4). This is its report.

National Identity, Popular Culture and Everyday Life

A complementary volume to Dilly Fung's A Connected Curriculum for Higher Education (2017), this book explores 'research-based education' as applied in practice within the higher education sector. A collection of 15 chapters followed by illustrative vignettes, it showcases approaches to engaging students actively with research and enquiry across disciplines. It begins with one institution's creative approach to research-based education – UCL's Connected Curriculum, a conceptual framework for integrating research-based education into all taught programmes of study – and branches out to show how aspects of the framework can apply to practice across a variety of institutions in a range of national settings. The 15 chapters are provided by a diverse range of authors who all explore research-based education in their own way. Some chapters are firmly based in a subject-discipline – including art history, biochemistry, education, engineering, fashion and design, healthcare, and veterinary sciences – while others reach across geopolitical regions, such as Australia, Canada, China, England, Scotland and South Africa. The final chapter offers 12 short vignettes of practice to highlight how engaging students with research and enquiry can enrich their learning experiences, preparing them not only for more advanced academic learning, but also for professional roles in complex, rapidly changing social contexts.

Ableism in Academia

From both an international perspective and through combining theory, practice and reflection, this book examines critically how listening to young children in early childhood services is understood and practiced.
