One Woman's Work for Farm Women

Excerpt from *One Woman's Work for Farm Women: The Story of Mary a Mayo's Part in Rural Social Movements* I was one of her boys and one of the first to call her Mother Mayo. I owe much to her, more than she knew, and per haps more than I realize. I rejoice that her character and her toil are to be set forth in so Winsome a way. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. One Woman's Work for Farm Women

"Examining how women were presented in farming and mainstream magazines over fifty years and interviewing more than 180 women who lived on farms, Lauters reveals that, rather than being victims of patriarchy, most farm women were astute businesswomen, working as partners with their husbands and fundamental to the farming industry"--Provided by publisher.

More Than a Farmer's Wife

This is the first specialised volume with a holistic approach dealing with the most vulnerable and neglected section of workers in unorganised sector of agriculture. Tracing women's role and status in the historical perspective, existing situational analysis and making future projections are the main sub-themes discussed threadbare. Women workers in different agro-ecological and types of farming have been analysed by various scholars. Papers on technology and women bring out, among other things, a situational analysis, work conditions in home and farm, wages, bearing on her farm employment and participation. Prospective role and status have been projected in the changing techno-economic context that warrants about the displacement of women workers in developing agriculture. In the series, this volume focusses on the issues of educational problems of the rural women in general and specialised training needs, facilities available and utilization of these in particular for providing them appropriate place in the prospective agriculture. Training needs of different groups in different agroclimatic and cultural contexts have been compiled at one place. Multiplicity of institutions has certainly benefited women fold but mushrooming of voluntary agencies is not desirable in spite of the best performance of voluntary agencies. What role different institutional structures have played in the education and training of women is discussed at length and future course of involvements is debated. Different agricultural development strategies adopted since independence have been critically examined for assessing the place of women in them and urgent action needed to meet the future challenges.

Proceedings of the ... Annual Meeting

A number of men and women contributed these essays on suffrage, the legal aspects of marriage, and women and education.

Women in Agriculture: Their status and role

This exciting new book brings together renowned international scholars to explore the gender effects of the current transformation of agriculture and rural life. It presents a comparative perspective on key research themes of rural gender relations, with each section beginning with a comprehensive overview. Five themes are addressed: developments in rural gender theory and research methodology; changes in farm households; patterns of rural migration; the impact of national and international policies; and the construction of gender identities as a result of rural changes. Contributors include scholars from Europe, North America, South Africa, Australia and New Zealand.

Woman's Work and Woman's Culture

After the War of 1812 and the removal of the region's Indigenous peoples, the American Midwest became a paradoxical land for settlers. Even as many settlers found that the region provided the bountiful life of their dreams, others found disappointment, even failure—and still others suffered social and racial prejudice. In this broad and authoritative survey of midwestern agriculture from the War of 1812 to the turn of the twentieth century, R. Douglas Hurt contends that this region proved to be the country's garden spot and the nation's heart of agricultural production. During these eighty-five years the region transformed from a sparsely settled area to the home of large industrial and commercial cities, including Chicago, Milwaukee, Cleveland, and Detroit. Still, it remained primarily an agricultural region that promised a better life for many of the people who acquired land, raised crops and livestock, provided for their families, adopted new technologies, and sought political reform to benefit their economic interests. Focusing on the history of midwestern agriculture during wartime, utopian isolation, and colonization as well as political unrest, Hurt contextualizes myriad facets of the region's past to show how agricultural life developed for midwestern farmers—and to reflect on what that meant for the region and nation.

Rural Gender Relations

The range of employment opportunities Taylor describes for women reveals the expansion of job opportunities available to women at the end of the 19th century.

Readings in Rural Sociology

Beginning with Native American women, this volume traces the history of farm women of all races in the United States. The complex working lives of rural women -- European immigrants, black slaves and then farmers, Hispanic women in the new border states -- emerge through letters, songs, fiction, official documents, journal entries, poetry, and oral history. The texts testify to women's love of the land, to their consciousness of racism and sexism, and to their energies for social change.

Rural Development Perspectives

Hill describes farm women's work on the farm, farm management, family relations, farm women's legal problems, their lack of political activity, and public policy as it affects farm women, the farm and the family.

The Grain of mustard seed, or, Woman's work in foreign parts

A new history of the American South during Reconstruction shows how a complex blending of new ideas and old hatreds developed in the region following the Civil War. By the author of *Vengeance and Justice*.

Agriculture in the Midwest, 1815–1900

In this innovative study of the South Carolina Low Country, author Stephanie McCurry explores the place of the yeomanry in plantation society--the complex web of domestic and public relations within which they were enmeshed, and the contradictory politics of slave society by which that class of small farmers extracted the privileges of masterhood from the region's powerful planters. Insisting on the centrality of women as historical actors and gender as a category of analysis, this work shows how the fateful political choices made by the low-country yeomanry were rooted in the politics of the household, particularly in the customary relations of power male heads of independent households assumed over their dependents, whether slaves or free women and children. Such masterly prerogatives, practiced in the domestic sphere and redeemed in the public, explain the yeomanry's deep commitment to slavery and, ultimately, their ardent embrace of secession. By placing the yeomanry in the center of the drama, McCurry offers a significant reinterpretation of this volatile society on the road to Civil War. Through careful and creative use of a wide variety of archival sources, she brings vividly to life the small worlds of yeoman households, and the larger world of the South Carolina Low Country, the plantation South, and nineteenth-century America.

Co-operation

European agricultural policy has the potential to restructure gender relations

How

On Behalf of the Family Farm traces the development of women's activism and agrarian feminisms in the Midwest after 1945, as farm women's lives were being transformed by the realities of modern agriculture. Author Jenny Barker Devine demonstrates that in an era when technology, depopulation, and rapid economic change dramatically altered rural life, midwestern women met these challenges with their own feminine vision of farm life. Their "agrarian feminisms" offered an alternative to, but not necessarily a rejection of, second-wave feminism. Focusing on women in four national farm organizations in Iowa—the Farm Bureau, the Farmers Union, the National Farm Organization, and the Porkettes—Devine highlights specific moments in time when farm women had to reassess their roles and strategies for preserving and improving their way of life. Rather than retreat from the male-dominated world of agribusiness and mechanized production, postwar women increasingly asserted their identities as agricultural producers and demanded access to public spaces typically reserved for men. Over the course of several decades, they developed agrarian feminisms that combined cherished rural traditions with female empowerment, cooperation, and collaboration. Iowa farm women emphasized working partnerships between husbands and wives, women's work in agricultural production, and women's unique ways of understanding large-scale conventional farming.

Family Economics Review

The farming wife presents a reassessment of family farming at a time when family enterprise is gaining in significance and interest beyond the farming arena. The book offers a feminist critique and reconstruction of petty commodity production, the concept widely used to describe various forms of small-scale production for the market based on family, or household, labour and property. Through a detailed study of family farming in England, the political economy of family-based production is examined as a unity of household and enterprise, intimately structured by patriarchal gender relations.

The Woman's Magazine

Long after the Mexican-American War brought the Southwest under the United States flag, Anglos and Hispanics within the region continued to struggle for dominion. From the arrival of railroads through the height of the New Deal, Sarah Deutsch explores the cultural and economic strategies of Anglos and Hispanics as they competed for territory, resources, and power, and examines the impact this struggle had on Hispanic work, community, and gender patterns. This book analyzes the intersection of culture, class, and gender at disparate sites on the Anglo-Hispanic frontier--Hispanic villages, coal mining towns, and sugar beet districts in Colorado and New Mexico--showing that throughout the region there existed a vast network of migrants, linked by common experience and by kinship. Devoting particular attention to the role of women in cross-cultural interaction, No Separate Refuge brings to light sixty years of Southwestern history that saw Hispanic work transformed, community patterns shifted, and gender roles critically altered. Drawing on personal interviews, school census and missionary records, private letters, and a wealth of other records, Deutsch traces developments from one state to the next, and from one decade to the next, providing an important contribution to the history of the Southwest, race relations, labor, agriculture, women, and Chicanos. This thirty-fifth anniversary edition reflects on its place in the history of the Anglo-Hispanic borderland, class, and gender.

Association Monthly

Different Places, Different Voices challenges Western feminist and post-colonial approaches in its analysis of the changing lives of women of Asia, Africa, Latin America and Oceania. Recognising the significance of place, this is a book informed by the voices of female geographers from the developing world. Twenty case studies present regional perspectives on urban and rural development, household reproduction and production and community organisation. The theoretical and contextual approach and the emphasis on location and positionality highlight the differences created by place to suggest other ways of seeing.

Zion's Home Monthly

New Hampshire ranks third nationally in the percentage of principal farm operators who are women, and these women are transforming what it means both to be a farmer and to run a successful farm.

Through informative prose and striking photographs, Helen Brody and Leslie Tuttle show how women in the Granite State are revitalizing farming by creating value-added products and developing new and vital markets for their locally grown food. Such innovations keep farms profitable and relevant, even as they work to protect the open land we all value. Expanding their roles to include accountant, sales expert, and educator, the state's women farmers occupy the forefront of national farm-to-community outreach, increasing public awareness of healthy foods and attracting travelers to New Hampshire's bounty. *New Hampshire Women Farmers* makes an excellent gift for anyone interested in the new directions that will sustain family farms in the twenty-first century.

The Gerritsen Collection of Women's History, 1543-1945

Rural societies around the world are changing in fundamental ways, both at their own initiative and in response to external forces. The Routledge International Handbook of Rural Studies examines the organisation and transformation of rural society in more developed regions of the world, taking an interdisciplinary and problem-focused approach. Written by leading social scientists from many countries, it addresses emerging issues and challenges in innovative and provocative ways to inform future policy. This volume is organised around eight emerging social, economic and environmental challenges: Demographic change. Economic transformations. Food systems and land. Environment and resources. Changing configurations of gender and rural society. Social and economic equality. Social dynamics and institutional capacity. Power and governance. Cross-cutting these challenges are the growing interdependence of rural and urban; the rise in inequality within and between places; the impact of fiscal crisis on rural societies; neoliberalism, power and agency; and rural areas as potential sites of resistance. The Routledge International Handbook of Rural Studies is required reading for anyone concerned with the future of rural areas.
