An Economic History of Modern Sweden

The book is based on a rich and detailed quantitative material from research over the past decades with consecutive time series over production volumes, employment, productivity, investments etc. for sectors

and branches covering the whole economy, even including estimates of non-marketed domestic work. It is also based on a broad literature from Swedish historiography with details on the individual level of firms, innovators and entrepreneurs. Focus is upon the interplay between technological, economic and social change where a number of broad themes are treated with a general interest to historians or economists, e.g. the role of social change and domestic markets versus international specialisation and exports as dynamic factors in Swedish economic growth.

Report on Procurement

This book brings together research into, and experience of, the practicalities, benefits, limitations, and ways of thinking theologically and pedagogically about Reflective Practice Groups for Clergy, and advocates this as providing opportunity for enhancing well-being, theological development, pastoral supervision and spiritual formation in community.
