REDD+ must be transformational. REDD+ requires broad institutional and governance reforms, such as tenure, decentralisation, and corruption control. These reforms will enable departures from business as usual, and involve communities and forest users in making and implementing policies that affect them. Policies must go beyond forestry. REDD+ strategies must include policies outside the forestry sector narrowly defined, such as agriculture and energy, and better coordinate across sectors to deal with non-forest drivers of deforestation and degradation. Performance-based payments are key, yet limited. Payments based on performance directly incentivise and compensate forest owners and users. But schemes such as payments for environmental services (PES) depend on conditions, such as secure tenure, solid carbon data and transparent governance, that are often lacking and take time to change. This constraint reinforces the need for broad institutional and policy reforms. We must learn from the past. Many approaches to REDD+ now being considered are similar to previous efforts to conserve and better manage forests, often with limited success. Taking on board lessons learned from past experience will improve the prospects of REDD+ effectiveness. National circumstances and uncertainty must be factored in. Different country contexts will create a variety of REDD+ models with different institutional and policy mixes. Uncertainties about the shape of the future global REDD+ system, national readiness and political consensus require flexibility and a phased approach to REDD+ implementation.

Realising REDD+

Mutual-fund superstar Peter Lynch and author John Rothchild explain the basic principles of the stock market and business in an investing guide that will enlighten and entertain anyone who is high-school age or older. Many investors, including some with substantial portfolios, have only the sketchiest idea of how the stock market works. The reason, say Lynch and Rothchild, is that the basics of investing—the fundamentals of our economic system and what they have to do with the stock market—aren't taught in school. At a time when individuals have to make important decisions about saving for college and 401(k) retirement funds, this failure to provide a basic education in investing can have tragic consequences. For those who know what to look for, investment opportunities are everywhere. The average high-school student is familiar with Nike, Reebok, McDonald's, the Gap, and the Body Shop. Nearly every teenager in America drinks Coke or Pepsi, but only a very few own shares in either company or even understand how to buy them. Every student studies American history, but few realize that our country was settled by European colonists financed by public companies in England and Holland—and the basic principles behind public companies haven't changed in more than three hundred years. In *Learn to Earn*, Lynch and Rothchild explain in a style accessible to anyone who is high-school age or older how to read a stock table in the daily newspaper, how to understand a company annual report, and why everyone should pay attention to the stock market. They explain not only how to invest, but also how to think like an investor.

The second half of the twentieth century was dominated by the unfolding drama of the Cold War, from the Berlin blockade to the fall of the Berlin Wall. A booming global economy has had its sinister shadow in the apparently insoluble crises that have beset much of the Third World. Above all, peace in the West has been offset by wars of unbelievable murderousness elsewhere. Reynolds' account is both an overview of the trends underlying this spectacular and awful variety, and an insight into the lives led in its midst.

This book examines how disruptive technologies and innovation underpin the attainment of a broader development agenda in Africa. Contributors show how distinctive forms of technological innovation can impact critical development processes. For example, disruptive technologies can deepen the ongoing democratic and governance waves in Africa, specifically in the area of contested elections. Similarly, innovations in agriculture, the environment and energy promote changes in value chain agriculture, and the use of sensors to manage e-waste and sustainable energy conservation are also transforming established practices. Furthermore, the role of disruptive technologies and innovation in education, health, financial services and the nature of paid work cannot be ignored. Individually and collectively, the authors discuss and highlight the mechanisms and initiatives that can contribute to the realization of the development goals of African countries, especially in a period where disruptive technologies are rapidly changing how things are done. As a result, this book, which represents one of the most recent systematic efforts to bring together dialogue on disruptive technologies in Africa, will be of particular use and benefit to a wide and an eclectic audience.
