Reframing Singapore

Over the past two decades, Singapore has advanced rapidly towards becoming a both a global city-state and a key nodal point in the international economic sphere. These developments have caused us to reassess how we understand this changing nation, including its history, population, and geography, as well as its transregional and transnational experiences with the external world. This collection spans several disciplines in the humanities and social sciences and draws on various theoretical approaches and methodologies in order to produce a more refined understanding of Singapore and to reconceptualize the challenges faced by the country and its peoples.

Compulsory Property Acquisition for Urban Densification

Densification has been a central method of achieving smart, sustainable cities across the world. This book explores international examples of the property rights tensions involved in attempting to develop denser, more sustainable cities through compulsory acquisition of property. The case studies from Europe, North America, eastern Asia and Australia show how well, or not, property rights have been recognised in each country. Chapters explore the significance of local legal frameworks and institutions in accommodating property rights in the densification process. In particular, the case studies address the following issues and more: Whether compulsory acquisition to increase densification is justified in practice and in theory The specific public benefits given for compulsory acquisition The role the development industry plays in facilitating, encouraging or promoting compulsory acquisition What compensation or offsets are offered for acquisition, and how are they funded? Is there a local or national history of compulsory property acquisition by government for a range of purposes? Is compulsory acquisition restricted to certain types or locations of densification? Where existing housing is acquired, are there obligations to provide alternative housing arrangements? The central aim of the book is to summarize international experiences of the extent to which property rights have or have not been protected in the use of compulsory property acquisition to achieve sustainable cities via urban densification. It is essential reading for all those interested in planning law, property rights, environmental law, urban studies, sustainable urban development and land use policy.

Age of Innocence

The Age of Innocence is about the author's life from age 3 to 12. He uses clips of events during that age to reflect on their meaning and what can be learned from them. Events are our memory. Innocence is instinctive, innate, spontaneous; less intuitive, less considered, less deliberate. Life is a big bundle of little things, little events. The diverse events in the universe of life serve a definite purpose. They are not accidental. Life has a higher design, the age of innocence is one place we can find some of that purpose; the ages of discovery, restlessness, and brooding will complete the other youthful places we can look. Reflection enables an honest and truthful review of who we are. The book is for learning, is as much about learning, about discovery. Time is the partner, the collaborator along with events and reflection that enable us to have a view of life's blueprint and God's hand in it. God is the primary cause of all that happens in life, in the universe. But, we must first acknowledge God for what He is, and have a personal relationship with Him.

Identity in Crossroad Civilisations

Deze bundel gaat over de vorming van identiteit door het samenspel van etniciteit, nationalisme en de effecten van globalisering. De essays in Crossroad Civilisations: Ethnicity, Nationalism and Globalism in Asia maken de gelaagdheid en de complexiteit hiervan duidelijk.

Singapore in Global History

This important overview explores the connections between Singapore's past with historical developments worldwide until present day. The contributors analyse Singapore as a city-state seeking to provide an interdisciplinary perspective to the study of the global dimensions contributing to Singapore's growth. The book's global perspective demonstrates that many of the discussions of Singapore as a city-state have relevance and implications beyond Singapore to include Southeast Asia and the world. This vital volume should not be missed by economists, as well as those interested in imperial history.

Tracks and Traces

This volume traces the threads that tie together an understanding of Thailand as a dynamic and rapidly changing society, through an examination of the work of one major scholar of the country, Andrew Turton. Turton's anthropological studies of Thailand cover a wide spectrum from politics and economy to ritual and culture, and have been crucial in shaping evolving understandings of Thai society. In this collection, ten leading specialists on Thailand from a variety of disciplines critically consider aspects of Turton's work in relation to the changing nature of different aspects of Thai society. The book tracks the links between past and present scholarship, examines the contextuality of scholarship in its times, and sheds light on the current situation in Thailand.

Social Movements in China and Hong Kong

Het uitgangspunt van dit boek is dat Chinese individuen van hun eigen inzet uit moeten kunnen gaan, ongeacht de beperkingen die hen door de staat worden opgelegd. Om hun belangen beter te kunnen verdedigen sluiten sommige individuen zich aan bij sociale bewegingen, die tot sociale protesten kunnen leiden.

Living Intersections: Transnational Migrant Identifications in Asia

This book presents ground-breaking theoretical, and empirical knowledge to produce a fine-grained and encompassing understanding of the costs and benefits that different groups of Asian migrants, moving between different countries in Asia and in the West, experience. The contributors—all specialist scholars in anthropology, geography, history, political science, social psychology, and sociology—present new approaches to intersectionality analysis, focusing on the migrants' performance of their identities as the core indicator to unravel the mutual constitutivity of cultural, social, political, and economic characteristics rooted in different places, which characterizes transnational lifestyles. The book answers one key question: What happens to people, communities, and societies under globalization, which is, among others, characterized by increasing cultural disidentification?

Ancient Southeast Asia

Ancient Southeast Asia provides readers with a much needed synthesis of the latest discoveries and research in the archaeology of the region, presenting the evolution of complex societies in Southeast Asia from the protohistoric period, beginning around 500BC, to the arrival of British and Dutch colonists in 1600. Well-illustrated throughout, this comprehensive account explores the factors which established Southeast Asia as an area of unique cultural fusion. Miksic and Goh explore how the local population exploited the abundant resources available, developing maritime transport routes which resulted in economic and cultural wealth, including some of the most elaborate art styles and monumental complexes ever constructed. The book's broad geographical and temporal coverage, including a chapter on the natural environment, provides readers with the context needed to understand this staggeringly diverse region. It utilizes French, Dutch, Chinese, Malay-Indonesian and Burmese sources and synthesizes interdisciplinary theoretical perspectives and data from archaeology, history and art history. Offering key opportunities for comparative research with other centres of early socio-economic complexity, Ancient Southeast Asia establishes the area's importance in world history.

Reading Contemporary Indonesian Muslim Women Writers

A study that discusses the construction of gender and Islamic identities in literary writing by four prominent Indonesian Muslim women writers: Titis Basino P I, Ratna Indraswari Ibrahim, Abidah El Kalieqy and Helvy Tiana Rosa.

The Makers & Keepers of Singapore History

Philip F. Williams has published nine books in East Asian studies, including *The Great Wall of Confinement* (UCal, 2004), and has been Professor of Chinese at Massey University and Arizona State University. --

Asian Literary Voices

This 2005 book argues that individuals move into transnational activism which links domestic to international politics.

The New Transnational Activism

A new, thoroughly updated edition of a comprehensive overview of knowledge management (KM), covering theoretical foundations, the KM process, tools, and professions. The ability to manage knowledge has become increasingly important in today's knowledge economy. Knowledge is considered a valuable commodity, embedded in products and in the tacit knowledge of highly mobile individual employees. Knowledge management (KM) represents a deliberate and systematic approach to cultivating and sharing an organization's knowledge base. This textbook and professional reference offers a comprehensive overview of the field. Drawing on ideas, tools, and techniques from such disciplines as sociology, cognitive science, organizational behavior, and information science, it describes KM theory and practice at the individual, community, and organizational levels. Chapters cover such topics as tacit and explicit knowledge, theoretical modeling of KM, the KM cycle from knowledge capture to knowledge use, KM tools, KM assessment, and KM professionals. This third edition has been completely revised and updated to reflect advances in the dynamic and emerging field of KM. The specific changes include extended treatment of tacit knowledge; integration of such newer technologies as social media, visualization, mobile technologies, and crowdsourcing; a new chapter on knowledge continuity, with key criteria for identifying knowledge at risk; material on how to identify, document, validate, share, and implement lessons learned and best practices; the addition of new categories of KM jobs; and a new emphasis on the role of KM in innovation. Supplementary materials for instructors are available online.

Knowledge Management in Theory and Practice, third edition

This unique volume utilizes the UNESCO Education for Sustainable Development (ESD) framework to illustrate successful integration of sustainability education in post-secondary foreign language (FL) learning. Showcasing a variety of approaches to using content-based instruction (CBI) in college-level courses, this text valuably demonstrates how topics relating to environmental, social, and cultural dimensions of sustainability can be integrated in FL curricula. Chapters draw on case studies from colleges throughout the US and consider theoretical and practical concerns relating to models of sustainability-based teaching and learning. Chapters present examples of project-, problem-, and task-based approaches, as well as field work, debate, and reflective pedagogies to enhance students'

awareness and engagement with sustainable development issues as they acquire a foreign language. Insights and recommendations apply across languages and highlight the potential contribution of FL learning to promote sustainability literacy amongst learners. This text will benefit researchers, academics, and educators in higher education with an interest in Modern Foreign Languages, sustainability education, training, and leadership more broadly.

Education for Sustainable Development in Foreign Language Learning

This extraordinary book, written by leading players in a burgeoning technology revolution, is about the merger of finance and technology (fintech), and covers its various aspects and how they impact each discipline within the financial services industry. It is an honest and direct analysis of where each segment of financial services will stand. *Fintech: The New DNA of Financial Services* provides an in-depth introduction to understanding the various areas of fintech and terminology such as AI, big data, robo-advisory, blockchain, cryptocurrency, InsurTech, cloud computing, crowdfunding and many more. Contributions from fintech innovators discuss banking, insurance and investment management applications, as well as the legal and human resource implications of fintech in the future.

Fintech

Explorations of science, technology, and innovation in Africa not as the product of “technology transfer” from elsewhere but as the working of African knowledge. In the STI literature, Africa has often been regarded as a recipient of science, technology, and innovation rather than a maker of them. In this book, scholars from a range of disciplines show that STI in Africa is not merely the product of “technology transfer” from elsewhere but the working of African knowledge. Their contributions focus on African ways of looking, meaning-making, and creating. The chapter authors see Africans as intellectual agents whose perspectives constitute authoritative knowledge and whose strategic deployment of both endogenous and inbound things represents an African-centered notion of STI. “Things do not (always) mean the same from everywhere,” observes Clapperton Chakanetsa Mavhunga, the volume's editor. Western, colonialist definitions of STI are not universalizable. The contributors discuss topics that include the trivialization of indigenous knowledge under colonialism; the creative labor of chimurenga, the transformation of everyday surroundings into military infrastructure; the role of enslaved Africans in America as innovators and synthesizers; the African ethos of “fixing”; the constitutive appropriation that makes mobile technologies African; and an African innovation strategy that builds on domestic capacities. The contributions describe an Africa that is creative, technological, and scientific, showing that African STI is the latest iteration of a long process of accumulative, multicultural knowledge production. Contributors Geri Augusto, Shadreck Chirikure, Chux Daniels, Ron Eglash, Ellen Foster, Garrick E. Louis, D. A. Masolo, Clapperton Chakanetsa Mavhunga, Neda Nazemi, Toluwalogo Odumosu, Katrien Pype, Scott Remer

What Do Science, Technology, and Innovation Mean from Africa?

In our “wireless” world it is easy to take the importance of the undersea cable systems for granted, but the stakes of their successful operation are huge, as they are responsible for carrying almost all transoceanic Internet traffic. In *The Undersea Network* Nicole Starosielski follows these cables from the ocean depths to their landing zones on the sandy beaches of the South Pacific, bringing them to the surface of media scholarship and making visible the materiality of the wired network. In doing so, she charts the cable network's cultural, historical, geographic and environmental dimensions. Starosielski argues that the environments the cables occupy are historical and political realms, where the network and the connections it enables are made possible by the deliberate negotiation and manipulation of technology, culture, politics and geography. Accompanying the book is an interactive digital mapping project, where readers can trace cable routes, view photographs and archival materials, and read stories about the island cable hubs.

The Undersea Network

First Published in 2008. Routledge is an imprint of Taylor & Francis, an informa company.

Handbook of Research on Educational Communications and Technology

This compilation of 29 country studies could not be more timely. Recent student unrest in El Salvador, Czechoslovakia, and West Germany, a national student forum held in Moscow, and China's Tiananmen

Square student tragedy all suggest a worldwide upsurge in students' efforts to participate in political life. . . . Each chapter presents historical analyses of key events, with emphasis on the past three decades. . . . Altbach has assembled a strong international team in a landmark work. Choice Providing a global perspective on student political activism in 29 countries, this reference work features in-depth essays by specialists who bring multidisciplinary insights to student movements, programs, and motivations and to the historical, political, social, and educational contexts in which these movements exist. Altbach defines student political activism and outlines the rationale behind this important collection of essays--why student political activism should be studied and who can benefit most from knowledge of this historically important force. He elaborates on how an understanding of the workings of student politics can benefit political leaders, members of the academic community, and the activists themselves. The historical role played by student political movements in the development of nationalism in Germany and in colonial nations in Asia and Africa is described, and the powerful university reform movements of Latin America are reviewed. Student activism is revealed to be a significant, perennial, and accepted factor in many Third World political arenas. However, in most parts of the world, student movements as a political force, whether right-wing, left-wing, liberal, or radical are characteristically sporadic but often very influential phenomena. The impossibility of a permanent revolution in the university is explained as are the sociological factors that tend to undermine sustained student movements. The impact and longevity of student movements depend to a certain extent, on the responses to activism by the mass media, by key social groups outside the universities, by the university authorities themselves, and by other extra-campus entities such as governments, and these factors are thoroughly investigated. Who Are the Activists considers activist leadership in a comparative context using available sociological research data to present a fascinating portrait of the students--their numbers, political and ideological characteristics, their major areas of study, and the socioeconomic backgrounds of their families of origin. United States student political activism is addressed in three separate chapters that cover the period from 1905 to 1960, the volatile 1960s, and the post-sixties, an era of transformation. Twenty-nine other essays survey activism in major countries in Africa, Asia, Europe, Latin America, and Canada. An important reference tool and the first compilation on the topic in a decade, Student Political Activism will be extremely useful to specialists in international relations, political science, comparative education, and higher education as well as to students, college and university administrators, and librarians.

Student Political Activism

This fully revised classic text provides a comprehensive and integrated overview of the community theory and skills fundamental to all areas of social work practice.

Community Practice

While Muslims in Indonesia have begun to turn towards a strict adherence to Islam, the reality of the socio-religious environment is much more complicated than a simple shift towards fundamentalism. In this volume, contributors explore the multifaceted role of Islam in Indonesia from a variety of different perspectives, drawing on carefully compiled case studies. Topics covered include religious education, the increasing number of Muslim feminists in Indonesia, the role of Indonesia in the greater Muslim world, social activism and the middle class, and the interaction between Muslim radio and religious identity.

Islam in Indonesia

This book surveys the growth and development of Islam in Malaysia from the eleventh to the twenty-first century, investigating how Islam has shaped the social lives, languages, cultures and politics of both Muslims and non-Muslims in one of the most populous Muslim regions in the world. Khairudin Aljunied shows how Muslims in Malaysia built upon the legacy of their pre-Islamic past while benefiting from Islamic ideas, values, and networks to found flourishing states and societies that have played an influential role in a globalizing world. He examines the movement of ideas, peoples, goods, technologies, arts, and cultures across into and out of Malaysia over the centuries. Interactions between Muslims and the local Malay population began as early as the eighth century, sustained by trade and the agency of Sufi as well as Arab, Indian, Persian, and Chinese scholars and missionaries. Aljunied looks at how Malay states and societies survived under colonial regimes that heightened racial and religious divisions, and how Muslims responded through violence as well as reformist movements. Although there have been tensions and skirmishes between Muslims and non-Muslims in Malaysia, they have learned in the main to co-exist harmoniously, creating a society comprising of a variety of distinct

populations. This is the first book to provide a seamless account of the millennium-old venture of Islam in Malaysia.

Islam in Malaysia

This book describes the evolving CBRN risk landscape and highlights advances in the “core” CBRN technologies, including when combined with (improvised) explosive devices (CBRNe threats). It analyses how associated technologies create new safety and security risks, challenging certain assumptions that underlie current control regimes. The book also shows how technologies can be enablers for more effective strategies to mitigate these risks. 21st-century safety and security risks emanating from chemical, biological, radiological and nuclear materials – whether resulting from natural events, accidents or malevolent use - are increasingly shaped by technologies that enable their development, production or use in ways that differ from the past. Artificial intelligence, the use of cyberspace, the revolution in the life sciences, new manufacturing methods, new platforms and equipment for agent delivery, hypersonic weapons systems, information tools utilised in hybrid warfare – these and other technologies are reshaping the global security environment and CBRN landscape. They are leading to a growing potential for highly targeted violence, and they can lead to greater instability and vulnerability worldwide. At the same time, technology offers solutions to manage CBRN risks. Examples are faster detection, more accurate characterisation of the nature and origin of CBRN agents, new forensic investigation methods, or new medical treatments for victims of CBRN incidents. New educational concepts help to foster a culture of responsibility in science and technology and strengthen governance. New training methods help develop practical skills to manage CBRN risks more effectively. The book concludes that there is a growing need for a holistic framework towards CBRN risk mitigation. Traditional arms control mechanisms such as global, regional or bilateral treaties and export controls are still needed, as they provide a necessary legal and institutional framework. But laws and technology denial alone will not suffice, and institutional mechanisms can at times be weak. Given the pace of technological progress and the diffusion of critical knowledge, tools and materials, policymakers must accept that CBRN risks cannot be eliminated altogether. Instead, society has to learn to manage these risks and develop resilience against them. This requires a “softer”, broadly based multi-stakeholder approach involving governments, industry, the research and development communities, educators, and civil society. Furthermore, educating policymakers that cutting-edge technologies may seriously affect global strategic stability could create incentives for developing a more creative and contemporary arms control strategy that fosters cooperation rather than incremental polarisation.

21st Century Prometheus

Casta painting is a distinctive Mexican genre that portrays racial mixing among the Indians, Spaniards & Africans who inhabited the colony, depicted in sets of consecutive images. Ilona Katzew places this art form in its social & historical context.

Casta Painting

The extraction of minerals, oil and gas has a long and ambiguous history in development processes – in North America, Europe, Latin America and Australasia. Extraction has yielded wealth, regional identities and in some cases capital for industrialization. In other cases its main heritages have been social conflict, environmental damage and underperforming national economies. As the extractive economy has entered another boom period over the last decade, not least in Latin America, the countries in which this boom is occurring are challenged to interpret this ambiguity. Will the extractive industry yield, for them, economic development, or will its main gifts be ones of conflict, degradation and unequal forms of growth. This book speaks directly to this question and to the different ways in which Latin American countries are responding to the challenge of extractive industry. The contributors are a mixture of geographers, economists, political scientists, development experts and anthropologists, who all draw on sustained field work in the region. By digging deep into both national and local experiences with extractive industry they demonstrate the ways in which it transforms economies, societies, politics and environments. They pay particular attention to the social conflict that extraction consistently produces, and they ask how far this conflict might usher in political and institutional changes that could lead to a more productive relationship between extraction and development. They also ask whether the existence of left-of-centre governments in the region changes the relationships between extractive industry and development. The book makes clear the immense difficulties that countries and regional societies face in harnessing extractive industry for the collective good. For the most part the

findings question the wisdom of the development model that many countries in the region have taken up and which emphasises the productive roles of mining and hydrocarbon industries. The book should be of interest to students and researchers of Development Studies, Geography, Politics and Political Economy, as well as Anthropology.

Social Conflict, Economic Development and the Extractive Industry

From 1914 to 1934 the US government sent Native American girls to work as domestic servants in the homes of white families. *Matrons and Maids* tells this forgotten history through the eyes of the women who facilitated their placements. During those two decades, "outing matrons" oversaw and managed the employment of young Indian women. In Tucson, Arizona, the matrons acted as intermediaries between the Indian and white communities and between the local Tucson community and the national administration, the Office of Indian Affairs. Based on federal archival records, *Matrons and Maids* offers an original and detailed account of government practices and efforts to regulate American Indian women. Haskins demonstrates that the outing system was clearly about regulating cross-cultural interactions, and she highlights the roles played by white women in this history. As she compellingly argues, we cannot fully engage with cross-cultural histories without examining the complex involvement of white women as active, if ambivalent, agents of colonization. Including stories of the entwined experiences of Indigenous and non-Indigenous women that range from the heart-warming to the heart-breaking, *Matrons and Maids* presents a unique perspective on the history of Indian policy and the significance of "women's work."

Matrons and Maids

"This essays in this book explore the many facets of language rights and language protection from a variety of theoretical, legal, and academic perspectives. Important lessons are taken from the Basque case in Europe, and Native American and French-Canadian cases in North America. Woven throughout the book is the belief in the power of discourse and research to protect and even enhance linguistic diversity through legal recognition and other means . Language protection, however, is only possible if we encourage the acceptance of cultural diversity and multilingualism as a positive outcome for the whole population of the state, not just for a minority within it. We should abandon the idea of the monolingual mono-cultural nation-state, and encourage the population of each country to adopt the concept of a multi-cultural state." -- Back cover (page 4 of cover).

Language Rights and Cultural Diversity

Challenging theoretical and conceptual orthodoxies, this book presents interdisciplinary thinking and critical perspectives on childhood and youth, to address the emerging consensus that boundaries between childhood, youth and adulthood are blurred.

Handbook of Children and Youth Studies

Land reforms are laws that are intended, and likely, to cut poverty by raising the poor's share of land rights. That raises questions about property rights as old as moral philosophy, and issues of efficiency and fairness that dominate policy from Bolivia to Nepal. Classic reforms directly transfer land from rich to poor. However, much else has been marketed as land reform: the restriction of tenancy, but also its de-restriction; collectivisation, but also de-collectivisation; land consolidation, but also land division. In 1955-2000, genuine land reform affected over a billion people, and almost as many hectares. Is land reform still alive, for example in Bolivia, South Africa and Nepal? Or is it dead and, if so, is this because it has succeeded, or because it has failed? There has been massive research on land reform and this book builds on some surprising findings. Small farms' share in land is rising in most of Asia and Africa. This is not driven (as widely claimed) by growth in rural population or farm productivity, but by the relative efficiency of small farms, and in some cases by land reform. Whether land reform helps the poor depends not only on land transfers, but at least as much on its effects through employment, non-farm activity, GDP growth and distribution, as well as the village status and power of the poor. Avoidance, evasion and even distortion of land reform laws sometimes advance their main aims. Liberalisation and its accompaniments (such as supermarkets) can be powerful friends or fatal foes of small farms and land reform. This book will be of great interest to students, researchers and consultants working on agriculture, farm organisation, rural development and poverty reduction, with special emphasis on developing countries.

Land Reform in Developing Countries

This book deals with the genesis, outbreak and far-reaching effects of a legal controversy and the resulting outbreak of mass violence, which determined the course of British colonial rule after post World War Two in Singapore and Malaya. Based on extensive archival sources, it examines the custody hearing of Maria Hertogh, a case which exposed tensions between Malay and Singaporean Muslims and British colonial society. Investigating the wide-ranging effects and crises faced in the aftermath of the riots, the analysis focuses in particular on the restoration of peace and rebuilding of society. The author provides a nuanced and sophisticated understanding of British management of riots and mass violence in Southeast Asia. By exploring the responses by non-British communities in Singapore, Malaya and the wider Muslim world to the Maria Hertogh controversy, he shows that British strategies and policies can be better understood through the themes of resistance and collaboration. Furthermore, the book argues that British enactment of laws pertaining to the management of religions in the post-war period had dispossessed religious minorities of their perceived religious rights. As a result, outbreaks of mass violence and continual grievances ensued in the final years of British colonial rule in Southeast Asia - and these tensions still pertain in the present. This book will be of interest to scholars and students of law and society, history, Imperial History and Asian Studies, and to anyone studying minorities, and violence and recovery.

Colonialism, Violence and Muslims in Southeast Asia

The use of smart technologies and social media by staff and students in and out of the classroom has implications for academic practice in post-compulsory education. Unlike previous eras of learning with technology, change is being led by the students and academics themselves and this establishes a challenge to institutions. This shift demands that we reassess our understanding of formal and informal engagement, the physical and virtual environments we use, and the people we involve. Smart Learning: teaching and learning with smartphones and tablets in post compulsory education observes how personal smart technology, social media, rich digital media as well as ideas about open learning work together to form a new immersive and interactive space for learning. The Smart Learning book is a product of the Media-Enhanced Learning Special Interest Group (MELSIG) which has considered the opportunities and challenges afforded by new media in developing a forward looking Digital Age, learner-centred view of academia since 2008. MELSIG is a self-driven association fascinated and excited by thinking differently, reflectively and critically. Working informally across UK post-compulsory education around special foci, the group runs sharing and developing practice events and webinars, as well as organising collective research and writing activities about academic innovation with digital and social media. Smart Learning is made up of thought pieces, research chapters and case studies. It is punctuated with scenario vignettes, making real this new thinking about learning with personal smart devices.

Smart Learning

Learning Under the Lens: Applying Findings from the Science of Learning to the Classroom highlights the innovative approach being undertaken by researchers from the disparate fields of neuroscience, education and psychology working together to gain a better understanding of how we learn, and its potential to impact student learning outcomes. The book is structured in four parts: 'Science of learning: a policy perspective' sets the scene for this emerging field of research; 'Self regulation of learning' and 'Technology and learning' feature findings by eminent international and national researchers in the field and provides an insight into some of the innovative research illustrating the depth, breadth and multi-disciplinarity of the research; and 'Research translation' focuses on the scaled-up implementation of research findings in authentic learning settings, and showcases research findings which are having impact in learning environments. This fascinating book is intended as a reference tool to create awareness among researchers, policy makers, and education practitioners of the research being undertaken in the science of learning field and its potential to impact student learning outcomes.

Learning Under the Lens

"Explores working with organizations and communities with a unique macro practice model focusing on making changes within diverse communities and organizations. This book is part of the Connecting core competencies series. This series helps students understand and master CSWE's core competencies with a variety of pedagogy highlighted competency content and critical thinking questions for the

competencies throughout. The book focuses on work with organizations and communities, including planned change approaches and implementation"--Publisher.

Social Work Macro Practice

This handbook explores the ways in which Islam, as one of the fastest growing religions, has become a global faith for both Muslims and non-Muslims in Southeast Asia with its universality, inclusivity, and shared features with other Islamic expressions and manifestations. It offers an up-to-date, wide-ranging, comprehensive, concise, and readable introduction to the field of Islam in Southeast Asia. With specific themes of pertinent contemporary relevance, the contributions by experts in the field provide fresh insights into the roles of states, societies, scholars, social movements, political parties, economic institutions, sacred sites, and other forces that structured the faith over many centuries. The handbook is structured in three parts: Muslim Global Circulations Marginal Narratives Refashioning Pieties This handbook stands out as a single and synergistic reference work that explores the ebb and flow of Islam seeking to decenter many existing assumptions about it in Southeast Asia. It will be an indispensable resource for scholars, students, and policymakers working on Islam, Muslims, and their interactions with other communities in a plural setting.

Routledge Handbook of Islam in Southeast Asia

Selecting from the wide range of research methodologies remains a dilemma for all scholars, not least those looking to study the world of accounting. Both established and emerging research methods are frequently advocated, creating a challengingly broad range of choices. Covering a selection of qualitative methodological issues, research strategies and methods, this comprehensive compilation provides an essential guide to the choice and execution of qualitative research approaches in this field. The contributions are grouped into four sections: Worldview and paradigms Methodologies and strategies Data collection methods and analysis Experiencing qualitative field research: personal reflections Edited by leading scholars, with contributions from experts and rising stars, this volume will be essential reading for anyone looking to undertake research in the qualitative accounting field.

The Routledge Companion to Qualitative Accounting Research Methods

Cosmopolitan ideals and pluralist tendencies have been employed creatively and adapted carefully by Muslim individuals, societies and institutions in modern Southeast Asia to produce the necessary contexts for mutual tolerance and shared respect between and within different groups in society. Organised around six key themes that interweave the connected histories of three countries in Southeast Asia - Singapore, Malaysia and Indonesia - this book shows the ways in which historical actors have promoted better understanding between Muslims and non-Muslims in the region. Case studies from across these countries of the Malay world take in the rise of the network society in the region in the 1970s up until the early 21st century, providing a panoramic view of Muslim cosmopolitan practices, outlook and visions in the region.

Muslim Cosmopolitanism

This book provides a comprehensive understanding of environmental regionalism at the international level, analyzing the concept and identifying recurring patterns from six in-depth case studies. While ecoregions or environmental regions are defined on ecological boundaries rather than administrative criteria, ecoregionalism is the idea that regional dynamics should cluster around ecoregions, while ecoregionalization is the tendency of regional dynamics to cluster around ecoregions. Focusing on the international level, this book presents six cases of ecoregional processes from around the world and the regional environmental agreements: two are terrestrial, the Alps and the Andes; two are marine, the Mediterranean Sea and the Baltic Sea; two are related to freshwater ecosystems: the Amu Darya in Central Asia and the Great Lakes in North America. The book analyzes both ecoregional processes focused on the environment, as well as intersectoral ecoregional processes. The case studies are analyzed based on the ecoregional governance framework, developed by the author for this book. Despite the diversity of context, the similarity of the governance system of the six cases is striking. Several recurring patterns have been identified, which may also extend to the subnational level. They are not design principles, but may be taken into consideration for the design or redesign of current and future regional environmental agreements and processes. This book will be of great interest to students and scholars of environmental politics, natural resource management, spatial planning and international relations.

Ecoregionalism

For Resilience Engineering, 'failure' is the result of the adaptations necessary to cope with the complexity of the real world, rather than a breakdown or malfunction. The performance of individuals and organizations must continually adjust to current conditions and, because resources and time are finite, such adjustments are always approximate. This definitive new book explores this groundbreaking new development in safety and risk management, where 'success' is based on the ability of organizations, groups and individuals to anticipate the changing shape of risk before failures and harm occur. Featuring contributions from many of the worlds leading figures in the fields of human factors and safety, Resilience Engineering provides thought-provoking insights into system safety as an aggregate of its various components, subsystems, software, organizations, human behaviours, and the way in which they interact. The book provides an introduction to Resilience Engineering of systems, covering both the theoretical and practical aspects. It is written for those responsible for system safety on managerial or operational levels alike, including safety managers and engineers (line and maintenance), security experts, risk and safety consultants, human factors professionals and accident investigators.
