Case Studies on Information Technology in Higher Education: Implications for Policy and Practice

Case Studies on Information Technology in Higher Education: Implications for Policy and Practice is a collection of cases by researchers and practitioners that investigates examples of integrating IT in higher education, examining both successes and failures in college and university settings.

Preparing for the Revolution

The rapid evolution of information technology (IT) is transforming our society and its institutions. For the most knowledge-intensive entities of all, research universities, profound IT-related challenges and opportunities will emerge in the next decade or so. Yet, there is a sense that some of the most significant issues are not well understood by academic administrators, faculty, and those who support or depend on the institution's activities. This study identifies those information technologies likely to evolve in the near term (a decade or less) that could ultimately have a major impact on the research university. It also examines the possible implications of these technologies for the research university's activities (learning, research, outreach) and its organization, management, and financing—and for the broader higher education enterprise. The authoring committee urges research universities and their constituents to develop new strategies to ensure that they survive and thrive in the digital age.

In View of Academic Careers and Career-Making Scholars

This volume connects career making to the general social context in which it takes place, careermaking individuals to the large institutional establishment in which they operate, and specifically career academicians to the overall knowledge enterprise from which they draw their intellectual inspiration, on which they build their career achievements, and to which they contribute their personal talents. The main purpose is to explore what academic institutions, the knowledge enterprise, and the society as a whole can and ought to do to enhance productivity, facilitate performance, and improve experience of individual academicians in their career-making endeavor. Although various innovative ideas are

presented to improve normal procedures or standard processes throughout academia, answers to this focal question often lie in different levels of organizational units involved in academic operation. That is, what should a department do for its faculty, a college for its departments, a university for its colleges, an association for its member organizations, or a government for its academic institutions, in the best interest of the latter? Similarly, although reformative measures are proposed to the attention of established entities or institutionalized systems, change within the existing situation or practice to a large degree depends upon how people in various social roles relate to each other, in attitude as well as in behavior, when they perform their specific job. In other words, what should a professor do for graduate students, a senior scholar for junior colleagues, a chair for faculty members, a dean for chairs, a university chancellor for deans, an editor for authors, or an association president for the general membership, from the due perspective of the latter? The logic or legitimacy of examining this focal question and its organizational unit and social role is clear: a shining academician owes much to the support of his or her assistants, students, and followers, a rising university builds on the productivity of its individual divisions, and a thriving knowledge enterprise depends upon the success of individual career-making scholars. Beyond its own functionality and success, by division of labor, the higher level or the larger system has an inescapable responsibility to ensure that individual players or components therein grow, develop, and perform to the best of their potential. In content, this volume consists of sixteen chapters. Chapter 1 identifies main pathways and stages in academic careers. Chapters 2–5 focuses on the career process, exploring major requirements that an academician has to work on and fulfill in his or her career-making endeavor. These requirements include educational preparation, job search, institutional placement, and professional networking. Chapters 6–15 centers on the career structure, examining essential elements that a scholar has to build and maintain in his or her career identity. These elements range from the academic degree, position, publication, teaching, presentation, service, grants, awards, and membership in academic associations, to tenure. The last chapter capitalizes on the curriculum vitae as a miniature of the academic personality that a career professional must present to the community of scholarship.

The Arc of the Academic Research Career

America's research universities have undergone striking change in recent decades, as have many aspects of the society that surrounds them. This change has important implications for the heart of every university: the faculty. To sustain their high level of intellectual excellence and their success in preparing young people for the various roles they will play in society, universities need to be aware of how evolving conditions affect their ability to attract the most qualified people and to maximize their effectiveness as teachers and researchers. Gender roles, family life, the demographic makeup of the nation and the faculty, and the economic stability of higher education all have shifted dramatically over the past generation. In addition, strong current trends in technology, funding, and demographics suggest that change will continue and perhaps even accelerate in academe in the years to come. One central element of academic life has remained essentially unchanged for generations, however: the formal structure of the professorial career. Developed in the mid-nineteenth and early twentieth centuries to suit circumstances quite different from today's, and based on traditions going back even earlier, this customary career path is now a source of strain for both the individuals pursuing it and the institutions where they work. The Arc of the Academic Research Career is the summary of a workshop convened by The Committee on Science, Engineering, and Public Policy in September 2013 to examine major points of strain in academic research careers from the point of view of both the faculty members and the institutions. National experts from a variety of disciplines and institutions discussed practices and strategies already in use on various campuses and identified issues as yet not effectively addressed. This workshop summary addresses the challenges universities face, from nurturing the talent of future faculty members to managing their progress through all the stages of their careers to finding the best use of their skills as their work winds down.

Cases on Technologies for Educational Leadership and Administration in Higher Education

Institutions of higher learning rely heavily on technological innovation to effectively deliver educational services and provide students with a quality experience. Thus, the ability of leaders and administrators at these institutions to produce effective policy and to innovate in an evolving world hinges on successfully applying technological solutions to everyday challenges facing their college or university. Cases on Technologies for Educational Leadership and Administration in Higher Education brings together a collection of practical case studies exploring the application of new technologies, such as student management systems and enterprise resource planning, along with strategies that educational

leaders can use to foster organizational change. Targeted toward college and university administrators and leaders, this book discusses successful strategies for managing universities in the tech-savvy 21st century.

Bulletin of the Atomic Scientists

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

Cases on Institutional Research Systems

Institutional research (IR) is a growing, applied, and interdisciplinary area that attracts people from a variety of fields, including computer programmers, statisticians, and administrators and faculty from every discipline to work in archiving, analyzing, and reporting on all aspects of higher education information systems. Cases on Institutional Research Systems is a reference book for institutional research, appealing to novice and expert IR professionals and the administrators and policymakers that rely on their data. By presenting a variety of institutional perspectives, the book depicts the challenges and solutions to those in higher education administration, and state, federal, and even international accreditation.

Bulletin of the Atomic Scientists

The Bulletin of the Atomic Scientists is the premier public resource on scientific and technological developments that impact global security. Founded by Manhattan Project Scientists, the Bulletin's iconic "Doomsday Clock" stimulates solutions for a safer world.

Science and Technology in the Academic Enterprise

The U.S. academic research enterprise is entering a new era characterized by remarkable opportunities and increased strain. This two-part volume integrates the experiential knowledge of group members with quantitative data analyses in order to examine the status of scientific and technological research in academic settings. Part One reviews the status of the current research enterprise, emerging trends affecting it, and issues central to its future. Part Two is an overview of the enterprise and describes long-term trends in financial and human resources. This new book will be useful in stimulating policy discussions—especially among individuals and organizations that fund or perform academic research.

IT Issues in Higher Education

""This book address information technology issues affecting institutions of higher learning such as security, data management, student access to information, and staff competency in information technology"--

Resources in Education

This guide for students and faculty discusses opportunities and implications of conducting research in a digital environment.

Issues for Science and Engineering Researchers in the Digital Age

Effective use of technology in areas that include admissions, record keeping, billing, compliance, athletic administration, and more hold untold potential to transform higher education by introducing significant efficiencies and dramatic cost reductions in serving students. How the institution organizes itself will to a large extent depend on how the IT systems are established and maintained. The design, development, management, utilization, and evaluation of these IT systems will be necessary for the university to operate successfully. IT Issues in Higher Education: Emerging Research and Opportunities is a pivotal reference source that provides vital research on the integration and management of information technology in higher education with a focus on issues of security, data management, student access to information, and staff competency. This publication explores present-day educational environments as well as educators' methods of applying technology to student success and highlights topics that include personal devices and institutional culture. It is ideally designed for academic professionals, lecturers,

students, professors, IT experts, instructional designers, curriculum developers, administrators, higher education faculty, researchers, and policymakers.

IT Issues in Higher Education: Emerging Research and Opportunities

This study looks at how faculty of US colleges and universities are experiencing the use of the artificial intelligence program ChatGPT by students and by themselves in their classes. The study also examines how college administration, academic departments, and individual professors and other instructors are developing guidelines for ChatGPT use. The report helps its readers to answer questions such as: to what extent do college faculty feel that ChatGPT undermines traditional approaches to college term papers? How serious a problem is ChatGPT inspired plagiarism and other unattributed uses of ChatGPT? To what degree and how do college faculty feel that ChatGPT should be integrated into traditional paper writing and other college course requirements? Just a few of this report's many findings are that: 13.62% of faculty surveyed felt that their college administration had developed general guidelines on student and faculty use of ChatGPT in their classes. Faculty at community colleges were more likely than those of faculty at other institutions to feel that unattributed use of ChatGPT by students was a significant problem. Faculty at private colleges were in general more highly satisfied than faculty at public colleges with the institutional response to challenges of ChatGPT. This 115-page study is based on data from a survey of 954 higher education faculty randomly chosen from nearly 500 colleges and universities in the USA. Data is broken out by personal variables such as work title, gender, personal income level, academic discipline, age and other variables, as well as institutional indicators such as college or university type or Carnegie class, enrollment size, public or private status and others.

Survey of US Higher Education Faculty 2023, Views on and Use of ChatGPT

An empowering guide for students in STEMM that demystifies the process of securing undergraduate research experiences. Conducting research is an important foundation for many undergraduates on STEMM career paths. But landing an extremely competitive research spot that is also an enriching experience involves knowing how to present yourself effectively and an awareness of your goals and expectations. In this book, an expert lab manager and a longtime principal investigator share their secrets for obtaining these coveted positions. Offering advice to students in a wide variety of STEMM fields at both research-intensive universities and primarily undergraduate institutions, *Getting In* helps students navigate the hidden curriculum of academia, unofficial rules that disproportionately affect first-generation college students and those from low-income backgrounds and communities historically underrepresented in science. The authors provide not only an overview of STEMM research and lab opportunities but also specific strategies for the entire application process—including how to write emails that get noticed by busy professors, how to ask for a research position during office hours, and interview questions to prepare for—so students can claim their place in research settings. With its emphasis on the many interpersonal and professional benefits of research experiences, *Getting In* equips all STEMM undergrads with the tools they need both to secure these valued positions and to develop habits that will build productive relationships with their future research mentors. As an undergrad, *Getting In* will help you: determine how much time you can spend on research by evaluating your current activity level and goals. find the time to do research without giving up your social life or risking your GPA. avoid common mistakes in the search, application, or interview that make it harder to find a research experience. write emails that get you noticed by busy professors by customizing the included templates. prepare for tough interview questions so you'll impress the interviewer with your answers, and be able to determine if the position is right for you. As a research mentor, *Getting In* will help your students: navigate the hidden curriculum of finding a research experience in science, technology, engineering, math, and medicine (STEMM). set realistic expectations for their research experience. understand why conducting research requires effort and will include some failure and other challenges. be active participants in their success in the lab.

Getting In

"This book focuses on the institutionalization of technology into education, specifically, discussing the integration of technology (and new techniques) into various areas of higher education"--Provided by publisher.

Cases on Digital Technologies in Higher Education: Issues and Challenges

"This book provides a sound overview of the ways that technology influences the human and organizational aspects of higher education and how technology is changing the relationship between faculty and students, higher education experience, and the role of colleges and universities within society as a whole"-- Provided by publisher.

Technology Integration in Higher Education: Social and Organizational Aspects

The flood of information technology (I.T.) products and services entering the market place often obscures the need to nurture the research enterprise. But as I.T. becomes integrated into all aspects of society, the need for research is even greater. And the range of issues that need to be addressed is broader than ever. This new book highlights the fundamental importance of research to ensure that I.T. meets society's expanding needs. Against the background of dramatic change in the I.T. landscape, the committee examines four key questions: Is the scope of I.T. research broad enough-particularly in the arena of large-scale systems-to address government, business, and social applications? Are government and industrial sponsors providing sufficient funding for I.T. research? Is the research net big both big and diverse enough to capture sufficient financial and intellectual resources to advance the field? Are structures and mechanisms for funding and conducting research suited to the new sets of research challenges?

Making IT Better

Computers and telecommunications have revolutionized the processes of scientific research. How is this information technology being applied and what difficulties do scientists face in using information technology? How can these difficulties be overcome? Information Technology and the Conduct of Research answers these questions and presents a variety of helpful examples. The recommendations address the problems scientists experience in trying to gain the most benefit from information technology in scientific, engineering, and clinical research.

Information Technology and the Conduct of Research

Fostering Sustained Learning Among Undergraduate Students

New perspectives on digital scholarship that speak to today's computational realities Scholars across the humanities, social sciences, and information sciences are grappling with how best to study virtual environments, use computational tools in their research, and engage audiences with their results. Classic work in science and technology studies (STS) has played a central role in how these fields analyze digital technologies, but many of its key examples do not speak to today's computational realities. This groundbreaking collection brings together a world-class group of contributors to refresh the canon for contemporary digital scholarship. In twenty-five pioneering and incisive essays, this unique digital field guide offers innovative new approaches to digital scholarship, the design of digital tools and objects, and the deployment of critically grounded technologies for analysis and discovery. Contributors cover a broad range of topics, including software development, hackathons, digitized objects, diversity in the tech sector, and distributed scientific collaborations. They discuss methodological considerations of social networks and data analysis, design projects that can translate STS concepts into durable scientific work, and much more. Featuring a concise introduction by Janet Vertesi and David Ribes and accompanied by an interactive microsite, this book provides new perspectives on digital scholarship that will shape the agenda for tomorrow's generation of STS researchers and practitioners.

Library Relocations and Collection Shifts

THE FACT THAT YOU HAVE CHOSEN TO TAKE A LOOK AT A report on careers as a college professor says that you are intellectually inclined and can already make a good argument. You will need both of these qualities in order to succeed in the demanding world of higher education. There is more to being a college professor than you may realize. For most people, college professors teach classes, grade papers and help students with major projects. College professors also do extensive research, write and publish papers and books, deliver lectures outside the usual classroom environment, consult with media and businesses within their area of expertise, and travel around the world to do research and work with their peers at other universities. It is true that some professors get out of the classroom more often than others, but being a college professor can be an expansive, far-reaching career if you

want it to be. College professors play a unique role in society. Not all good careers require earning a college degree, but those careers that tend to have the most influence on society all require advanced education. Senior executives, political leaders, military officers and most entrepreneurs go to college. How they apply what they learn in college can affect society in many ways. College professors shape and mold these future leaders in ways that nobody else can. To say that college professors are influential would be an understatement. There is never a bad time to become a college professor. Higher education is largely recession-proof, and most colleges and universities offer tenure to professors they want to keep. Tenure is typically granted after four to seven years of exemplary service and is a guarantee of employment. Once granted tenure, professors cannot be fired for expressing unpopular opinions. Tenure does not come easily. Professors work very hard to achieve tenure, teaching many classes and publishing many papers, but once you get it, you are set.

DigitalSTS

The magazine that helps career moms balance their personal and professional lives.

Bulletin of the Atomic Scientists

Many people in higher education are looking to networked resources and services when formulating strategies for addressing the pursuits of learning, teaching, research, and community service. Sometimes it may be difficult to determine if users are seeing the same things or the "right" things. This manual provides a set of tools for assessing the academic networked environment, not necessarily a strict blueprint for evaluation. It discusses benchmarking, focus groups, site visits, and other techniques for collecting and using qualitative data. Ways in which network activity can be measured are also discussed; assessment can involve counting registered users, costs, telecommunications "traffic," and use of computers and applications. Costs and usage of network services--online public library catalogs, campuswide information services, and distance education--as well as support services are also typical targets for assessment. A sample user survey related to these topics is provided, along with appendixes that offer self-assessment tools, data collection forms, information on software that measures network services and applications, and information technology surveys. (Contains 39 references.) (BEW)

Career as a College Professor

The magazine that helps career moms balance their personal and professional lives.

Working Mother

This study looks at who and how often faculty use Zoom, Teams, WebEx, Google Meet and other communications technologies. The study is designed to help answer questions such as: how much interaction between faculty members now takes place online rather than in person? How important are the use of communications technologies in the classroom post pandemic? How often are such technologies, and which ones, used in interfacing with students in critical non-classroom settings such as meeting with faculty during office hours or career or college advisory functions? The report gives specific data on the incidence and frequency of monthly use for each program and enables readers to track the type of faculty who are using each program. Discover the age, academic field and type of educational institution of the most likely WebEx user in higher education vs. the same data for Zoom, Teams or Google Meet. Just a few of this 113-page reports' many findings are that: 52.1% of faculty sampled report having used Microsoft Teams. Asian origin faculty have much lower rates of out of class interaction with students vis a vis videoconferencing than do Black, White or Latino faculty with their students. Among respondents earning more than \$150,000 per year, 64.76% reported much more use of videoconferencing than pre-pandemic, while among those earning less than \$50,000 per year, only 40.63% reported much more use. Data in the report is broken out by a broad range of personal and institutional variables including age, gender, work title, academic field, personal income level, type of higher education institution, and other useful variables.

Resources in Education

This book has explored in depth the beliefs and practices of foreign language teachers regarding global awareness in the context of a Chinese senior high school. This book defines global awareness as a combination of global knowledge, global attitudes, and global skills for a global citizen to act from the local community to the global community. By analysing qualitative data such as classroom observations, interviews and focus groups with language teachers and linking these findings to language education policy and practice in China, this book has explored how English language teachers teach English language, intercultural communicative competence and global awareness in China. This book will be of interest to researchers, language teachers and students in the fields of language education and intercultural communication. It also provides a readable overview for those new to the field of ICC and global citizenship education.

Developing Global Awareness for Global Citizenship Education

Teaching Recent Global History explores innovative ways to teach world history, beginning with the early 20th century. The authors' unique approach unites historians, social studies teachers, and educational curriculum specialists to offer historically rich, pedagogically innovative, and academically rigorous lessons that help students connect with and deeply understand key events and trends in recent global history. Highlighting the best scholarship for each major continent, the text explores the ways that this scholarship can be adapted by teachers in the classroom in order to engage and inspire students. Each of the eight main chapters highlights a particularly important event or theme, which is then complemented by a detailed discussion of a particular methodological approach. Key features include: • An overarching narrative that helps readers address historical arguments; • Relevant primary documents or artifacts, plus a discussion of a particular historical method well-suited to teaching about them; • Lesson plans suitable for both middle and secondary level classrooms; • Document-based questions and short bibliographies for further research on the topic. This invaluable book is ideal for any aspiring or current teacher who wants to think critically about how to teach world history and make historical discussions come alive for students.

Teaching Recent Global History

How is history represented? As just a record of the past, as a part of a present identity or as future goals? This book explores how historical contents and narratives are presented in school textbooks and other cultural productions (museums, monuments, etc) and also how they are understood by students, in the context of increasing globalization. In these contemporary conditions, the relation between history learning processes, in and out of school, and the construction of national identities presents an ever more important topic. It is being studied by looking at the appropriation of historical narratives, which are frequently based on the official history of a nation state. Most of the chapters in this volume are educational studies about how the learning of history takes place in school settings of different countries such as Canada, France, Germany, Latin America, Spain, the Netherlands, the United Kingdom and the United States. Covering such a broad sample of cultural and national contexts, they provide a rich reflection on history as a subject related to patriotism, cosmopolitanism, both or neither.

History Education and the Construction of National Identities

Hong Kong's Chinese History Curriculum from 1945: Politics and Identity investigates the ways in which Chinese history has evolved as a subject in Hong Kong secondary schools since 1945, and the various social, political and economic factors that have shaped the curriculum, through an examination of a wide range of primary and secondary source materials and interviews. This book examines how the aims, content, teaching, learning and assessment of the Chinese history curriculum have evolved since 1945. It describes how Chinese history became an independent subject in secondary schools in Hong Kong despite the political sensitivity of the subject, how it consolidated its status during the colonial period,

and how it has faced threats to its independence since the return of Hong Kong to China in 1997. An important element of the book is its in-depth analysis of the major socio-political and socio-economic forces that have been involved in the development of Chinese history. This book will be of interest to all who are interested in history education and curriculum development, and readers who are concerned with history education.

Hong Kong's Chinese History Curriculum from 1945

With a focus on the role of discourse and language in education, this book examines China's educational reform from an original perspective that avoids mapping on Westernized educational sensibilities to a Chinese environment. Zhao untangles the tradition-modernity division expressed in China's educational language about the body and teacher-student difference. Exploring the historical and cultural implications of the ways China's schooling is talked about and acted upon, Zhao argues that Chinese notion "wind" (feng) is a defining aspect of Chinese teaching and learning. Incorporating Western and Chinese literature, this book explores the language of education, curriculum, and knowledge on a cross-cultural landscape and as cultural inscriptions.

China's Education, Curriculum Knowledge and Cultural Inscriptions

Visions of the past are crucial to the way that any community imagines itself and constructs its identity. This edited volume contains the first significant studies of the politics of history education in East Asian societies.

Students' Approaches to Learning and Understanding in As Level History

Why are so many African American and Latino students performing less well than their Asian and White peers in classes and on exams? Researchers have argued that African American and Latino students who rebel against "acting white" doom themselves to lower levels of scholastic, economic, and social achievement. In *Keepin' It Real: School Success beyond Black and White*, Prudence Carter turns the conventional wisdom on its head arguing that what is needed is a broader recognition of the unique cultural styles and practices that non-white students bring to the classroom. Based on extensive interviews and surveys of students in New York, she demonstrates that the most successful negotiators of our school systems are the multicultural navigators, culturally savvy teens who draw from multiple traditions, whether it be knowledge of hip hop or of classical music, to achieve their high ambitions. *Keepin' it Real* refutes the common wisdom about teenage behavior and racial difference, and shows how intercultural communication, rather than assimilation, can help close the black-white gap.

History Education and National Identity in East Asia

This book is a narrative inquiry that focuses on four participating Chinese teacher candidates' cross-cultural learning in Canada and stories of induction in Southwest China. Through the lens of "three-dimensional inquiry space" and "reciprocal learning in teacher education," the author explores the influence of cross-cultural experiences on the dissonance of pedagogies, teacher-student relationships, socialization, and beliefs about teaching and learning that interweave global and national curriculum boundaries. The chapters provide insight into how Chinese beginning teachers struggle to voice and to socialize among a cacophony of past practices, lived experiences, and cross-cultural experiences.

Linguistics and Language Behavior Abstracts

The book explores the state of social studies education within selected East Asian societies and provides some insights into distinctive classroom practices. In an increasingly volatile and unpredictable

world, the education of young people who both understand the contexts in which they are growing up and see the need for engaging with them is a top priority. This task falls to social studies education which carries the responsibility for inducting young people into their social world and helping them to see the role they can play within it. This is particularly important in East Asia where strong economic growth, long held cultural values and diverse political systems create an environment that challenges young people on multiple fronts. This book, with its team of regional authors, shows how different societies in the region are dealing with these challenges and what can be expected from future citizens. The book will appeal to policy makers, researchers and teachers interested in the current state of social studies education in East Asian societies.

Keepin' It Real: School Success Beyond Black and White

Why should inquiry - the engine for independent, curiosity- and interest-driven, life-long learning - be a curricular imperative, and its presence a criterion for excellent education? Is it possible to teach inquiry skills systematically and to engage learners in being inquirers across elementary, secondary, and post-secondary schooling? To answer these urgent questions, this book pulls together more than four decades of expert opinion, quantitative research, and qualitative research on inquiry in different disciplines, school subjects, and levels of education; and presents a dozen different pedagogical, philosophical, and disciplinary traditions within which evidence and rationale are found for building learning and teaching experiences around inquiry-based curricula. *Inquiry in Education, Volume I: The Conceptual Foundations for Research as a Curricular Imperative* is the first book to gather all these sources together, to build a cross-disciplinary case for inquiry as the central core of sound curriculum design, and to offer an organized interpretation of this large body of knowledge from a variety of perspectives and for different educational purposes. A companion volume, Shore, Aulls, & Delcourt, Eds., *Inquiry in Education, Volume II: Overcoming Barriers to Successful Implementation*, focuses on a corollary question: If inquiry is such a good thing, why is it not universal practice? What barriers stand in the way, and how can teachers overcome them? *Inquiry in Education, Volume I* is intended for scholars, faculty, and students of education, and for practitioners at all levels of schooling who support inquiry-oriented reforms in education and who want to learn more about how to use inquiry in their own practice.

Pre-Service Teacher Education and Induction in Southwest China

Based on case studies of Chinese teachers in Shanghai and their workplace learning within the context of reform, this book examines how Chinese teachers learn together when they engage in school-based learning activities. Since the New Curriculum Reform in China in 2001, school-based teaching research groups (TRGs) (Jiaoyanzu) have played an important role in changing teacher learning approaches. Informed by organizational learning frameworks and organizational knowledge theory, the author examines the processes and effects of teacher learning in school-based settings, particularly the role of school leadership in the learning and change of in-service teachers. Implications of sustainably optimizing the school-based teacher learning communities for school improvement are also discussed. The book will be helpful and valuable for policymakers, school leaders, researchers, students, teachers, and other educational practitioners in understanding the distinctive features of school-based teachers' learning in China.

The School Herald

The educational system in China is marked by its dramatic inequality between rural and urban schools. The challenges facing rural schools are usually understood as disadvantages in funding, facilities, and staffing, which consequently result in undesirable student performance in general. This book, however, penetrates these phenomena on the surface and brings forth a much deeper moral crisis in rural education, a crisis that is entrenched in the complicated interlocking of formal and informal institutions within and beyond the school. *The Demoralization of Teachers* describes the work and workplace in a rural school from the perspective of teachers who were working there. It faithfully depicts the lamentable state of teachers' work morale in the school and, little by little as if a detective story, reveals the reasons for the teachers' demoralization by vivid narratives. The book demonstrates the profound impact on the meanings of teaching exerted by the state curriculum reform, the formal and informal norms and regulations in the school, and the erosion of moral integrity in the state bureaucracy and the society at large. The crisis in the rural school stops to be a "rural" or educational problem in nature, but mirrors the societal-wide transformation in political economy as well as in ideology in the current reform China.

The sheer complexity of the moral crisis in this ethnography calls for renewed efforts to identify and investigate the educational problems in rural China from fresh theoretical perspectives that situate rural education in broader historical and social contexts and processes.

Social Studies Education in East Asian Contexts

Get ready for the biggest curriculum change in more than a decade! To help teachers to deliver the new Curriculum, Scholastic has published the first complete printed version for Key Stages 1 and 2. Full programmes of study for all 11 primary subjects are included along with practical advice on how to implement the curriculum using Scholastic's time-saving resources - including the 1 million best-selling 100s series.

Research in Education

This book traces the influences that have shaped the secondary school history curriculum during Hong Kong's prolonged political transition between the 1960s and the early 21st century, focusing especially on the relationship between history teaching and identity formation. The author's experience as a local history teacher during the mid-1990s made him conscious of the peculiarities of the history curriculum at the time; in particular, the neglect of Hong Kong's own history in both syllabuses and textbooks, and the unique division between 'History' and the entirely separate subject of 'Chinese History'.

Inquiry in Education, Volume I

This edited volume brings together 10 cutting-edge empirical studies on the realities of English language learning, teaching and testing in a wide range of global contexts where English is an additional language. It covers three themes: learners' development of interactional competence, the organization of teaching and testing practices, and sociocultural and ideological forces that may impact classroom interaction. With a decided focus on English-as-a-Foreign-Language contexts, the studies involve varied learner populations, from children to young adults to adults, in different learning environments around the world. The insights gained will be of interest to EFL professionals, as well as teacher trainers, policymakers and researchers.

How Do Teachers Learn Together?

This book looks at education reforms, planning and policy through an exploration of the Yash Pal Committee report (1993) in India, which made recommendations to improve the quality of learning while reducing cognitive burden on students. It analyses the wide-ranging impact the report had on curriculum, pedagogy, teacher education reforms and the national policy on education. The book examines the legacy of the report, tracing the various deliberations and critical engagements with issues around literacy, language and mathematics learning, curriculum reforms and classroom practices, assessment and evaluation. It reviews contemporary developments in research on learning in diverse disciplines and languages through the lens of the recommendations made by the Learning without Burden report while engaging with challenges and systemic issues which limit inclusivity and access to quality education. Drawing on extensive research and first-hand academic and teaching experience, this book will attract attention and interest of students and researchers of educational policy and analysis, linguistics, sociology and South Asian studies. It will also be of interest to policy makers, think tanks and civil society organisations.

The Demoralization of Teachers

In *Daily Giving Service: A History of the Diocesan Girls' School, Hong Kong*, Moira M. W. Chan-Yeung and her fellow contributors present a comprehensive history of one of Hong Kong's oldest girls' schools. As an alumna of the school, Chan-Yeung traces the history of her alma mater from its establishment in 1860, its development over the last 150 years until the recent decade. Having experienced stability and turbulences in Hong Kong in the twentieth century, the school has become one of the most prominent girl's schools in the city. In several chapters written by other alumni, various aspects of school life of different eras are reconstructed and remembered. The author and other contributors focused on the postwar era in which Hong Kong grew from a small city to a global metropolitan. The expansion of the Diocesan Girls' School largely followed this trend. The history of the school has also long been connected with the socio-economic development of Hong Kong society, sharing its happiness and sadness. "This book is likely to become the gold standard against which all future school histories

in Hong Kong are judged. Comprehensive, insightful, and full of fascinating anecdote, the inspiring story of DGS is told both chronologically in Moira Chan's main text and thematically in the specialist chapters contributed by her co-authors. This is a school history that tells us much about the larger story of education in Hong Kong while focusing on a single educational institution.” —Peter Cunich, Director, Centenary History Project, The University of Hong Kong “The history of DGS reinforces my observation that Hong Kong schools form an unusual system that combines the best of East and West in the philosophy and practice of education. The younger schools in Hong Kong that mushroomed later were basically modelled after schools such as DGS. That accounts for the excellence envied by many.” —Cheng Kai-ming, SBS, JP, Professor Emeritus, The University of Hong Kong “The history of DGS reveals how the path taken by the school over the years reflects the very qualities that define a person. DGS, like our home Hong Kong, has witnessed in equal measure challenges, disasters, and triumphs, and has dealt with them with equanimity. Dignity, respect, tolerance, courage, fairness, honesty, and of course excellence—underpinned by pastoral care—represent those essential qualities that have had to be called upon. As we now know, they have become the minimum tools expected of her students to realise fully their true potential in life and properly contribute to our community. This is their story.” —The Honourable Mr Geoffrey Ma Tao-li, GBM, Former Chief Justice of the Court of Final Appeal (2010–2021)

Thinking and Practice of Teaching in High School Chinese Under the New Curriculum

The Asia literacy dilemma brings forward a novel approach to the long-standing global debates of Asia-related teaching and learning. By bringing into focus ‘Asia’ as a curriculum area, the book provides original commentary on the rationale and feasibility of ‘Asia literacy’ and its role and significance within and for twenty-first-century education. The book’s unique contribution lies in a comprehensive problematisation of ‘Asia’ as planned, enacted and experienced curriculum, bringing together policy, teacher practice and student experiences to present an extensive discussion. By contextualising the problematics of Asia-related curriculum within contemporary national and transnational curriculum challenges, Cairns and Weinmann take account of conflicting discourses of nation-building, ethno-centrism, transnationalism, geo-economics and the purposes of twenty-first-century education. Its use of interview data with teachers and students recentres key actors that are often sidelined in official curriculum policy discourse. The book also introduces the concept of curricularisation to describe the process through which objects and discourses of curriculum are produced and reproduced. In doing so, the book presents a comprehensive discussion of the impossibilities and possibilities of Asia curriculum in the Australian context, providing an innovative longitudinal and integrated understanding of the status quo of Asia curriculum. Highlighting the urgent need to reinvigorate the re-emerging centrality of curriculum in recent education debates around policy, teacher standards, assessment and learning outcomes, this book is an important reference for education policy experts and academics in the fields of curriculum studies, teacher education and studies of Asia.

The National Curriculum in England - Handbook for Primary Teachers

An in-depth, veterinary-centered reference to the discipline of education Educational Principles and Practice in Veterinary Medicine provides a detailed, comprehensive reference to the discipline of education both broadly and as it relates to veterinary medicine. Written for veterinary faculty members, instructors, and educators in other health professions, the book offers an in-depth examination of knowledge and skills related to veterinary education. It discusses educational theory, how people learn, the structure and function of higher education, and educational technologies, among many other topics of importance. Sections cover educational leadership; professional development for faculty; research methods and study design; administration; outcomes and assessment; accreditation; and the roles of the professional program instructor. Educational Principles and Practice in Veterinary Medicine: Provides a detailed exposition to the discipline of education, encompassing both theory and practice Covers essential topics such as educational theory, the structure and function of higher education, and educational technologies, all tailored to veterinary education Acts as a reference to education-related knowledge and skills, with an emphasis on how these topics relate to veterinary medicine Supports veterinary faculty and instructors interested in taking their knowledge and skills to the next level Educational Principles and Practice in Veterinary Medicine offers veterinary faculty and instructors a complete resource for understanding the field of education and improving their skills and knowledge.

In Search of an Identity

During the educational and social transformations in politically tumultuous early twentieth-century China, Chinese teacher's schools played a critical role. They were a force in the changes that swept Chinese society, bridging Chinese and Western ideals, empowering women, and contributing to rural modernization. This innovative account examines the social and political aspects and impacts of these schools, their role in a society in transition, and their production of grassroots forces that lead to the Communist Revolution.

Humanities

This book examines both history textbook controversies AND teaching historical controversy in Asian contexts. The different perspectives provided by the book's authors offer numerous insights, examples, and approaches for understanding historical controversy to provide a practical gold mine for scholars and practitioners. The book provides case studies of history textbook controversies ranging from treatments of the Nanjing Massacre to a comparative treatment of Japanese occupation in Vietnamese and Singaporean textbooks to the differences in history textbooks published by secular and Hindu nationalist governments in India. It also offers a range of approaches for teaching historical controversy in classrooms. These include Structured Academic Controversy, the use of Japanese manga, teaching controversy through case studies, student facilitated discussion processes, and discipline-based approaches that can be used in history classrooms. The book's chapters will help educational researchers and curricularists consider new approaches for curriculum design, curriculum study, and classroom research.

Conversation Analytic Perspectives on English Language Learning, Teaching and Testing in Global Contexts

Vols. 17-18 cover 1775-1914.

Learning without Burden

In twenty-first-century China, socialist educational traditions have given way to practices that increasingly emphasize the individual. This volume investigates that trend, drawing on Hansen's fieldwork in a rural high school in Zhejiang where students, teachers, and officials of different generations, genders, and social backgrounds form what is essentially a miniature version of Chinese society. Hansen paints a complex picture of the emerging "neosocialist" educational system and shows how individualization of students both challenges and reinforces state control of society.

Daily Giving Service

Includes "War supplements," Jan-Nov. 1918; "Supplements," Dec. 1918-Nov. 1919. These were also issued as reprints.

The Asia Literacy Dilemma

An account of curriculum construction, teaching practice and classroom interaction in a Chinese secondary school by a foreign member of the faculty. Through day-to-day accounts the reader is shown not only the Chinese system but also how it compares with education debates across the globe.

Educational Principles and Practice in Veterinary Medicine

A critical examination of the rise of national history in early-twentieth-century China.

However, being diagnosed with a disability is not a guarantee of services

Having an identified educational disability is the first question when determining if a student qualifies.

Children need to meet I.D.E.A.'s definition of a child with a disability

Please see the links below for more details on each of these categories

There's often confusion around dyslexia, ADHD, and autism.

Let's discuss these, beginning with dyslexia and ADHD.

These are medical conditions diagnosed by a doctor or other expert

Specific learning disability and other health impairment

Remember that disability alone does not determine eligibility

There are two other considerations

And does the child need specially designed instruction?

a medical diagnosis and one of the 14 categories.

Keep in mind that an autism diagnosis does not automatically qualify

Just like dyslexia and ADHD, an educational evaluation is needed

to determine if the student meets the criteria for I.D.E.A.'s autism category.

And once again, those two additional requirements must be met

Does the disability adversely impact the child's educational progress?
