Three Little Words: A, an and The

A, an, and the: the three most common words in the English language! These Three Little Words have always been troublesome for new speakers of English, especially for people whose native language has no articles. They are often the last grammatical item that distinguishes the native speaker of English from the foreign-born speaker.

"Mrs. Oscar Hammerstein, so the story goes, once overheard someone praise "Ol' Man River" as a "great Kern song." "I beg your pardon," she said, "But Jerome Kern did not write 'Ol' Man River.' Mr. Kern wrote dum dum dum da; my husband wrote ol' man river." It's easy to understand her frustration. While the years between World Wars I and II have long been hailed as the "golden age" of American popular song, it is the composers, not the lyricists, who always usually get top billing. "I love a Gershwin tune" too often means just that-the tune-even though George Gershwin wrote many unlovable tunes before he began working with his brother Ira in 1924. Few people realize that their favorite "Arlen" songs each had a different lyricist-Ted Koehler for "Stormy Weather," Yip Harburg for "Over the Rainbow," Johnny Mercer for "That Old Black Magic." Only Broadway or Hollywood buffs know which "Kern" songs get their wry touch from Dorothy Fields, who would flippantly rhyme "fellow" with "Jello," and which of Kern's sonorous melodies got even lusher from Otto Harbach, who preferred solemn rhymes like "truth" and "forsooth." Jazz critics sometimes pride themselves on ignoring the lyrics to Waller and Ellington "instrumentals," blithely consigning Andy Razaf or Don George to oblivion"--

The Three Little Pigs

Three Little Pigs tells the story of three pigs who each build a house and then have to defend themselves against the big bad wolf.

The three little pigs

Walker Story Plays are dramatic versions of popular nursery stories that children will already be familiar with. The plays are written for four voices, with the parts clearly denoted by different colour bands.

The Poets of Tin Pan Alley

Reading and writing are the most important skills a child acquires during his or her lifetime--and it all begins in the early childhood classroom, where creative play, discovery and time to explore are at the heart of a developmentally appropriate and child-centered curriculum. Striking a balance between these often competing priorities can challenge even the most experienced educator.

The Knowledge Most Worth Having

The Knowledge Most Worth Having represents the essence of education at the University of Chicago—faculty and students grappling with key intellectual questions that span the humanities, while still acknowledging the need to acquire a depth of knowledge in one's chosen field. The papers collected here were delivered during an often-heated conference at the university in 1966, and include

contributions from such scholars as Northrop Frye, Richard McKeon, and, of course, the dean of the college, Wayne Booth himself. Taken as a whole, they present a passionate defense of liberal education, one that remains highly relevant today.

This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 edition. Excerpt: ... m'monly imparted in educational courses, very pa-Hittle is of any service in guiding a man in his fco Conduct as a citizen. Only a small part of the *' history he reads is of practical value; and of this small part he is not prepared to make proper use. He commonly lacks not only the materials for, but the very conception of, descriptive sociology; and he also lacks that knowledge of the organic sciences, without which even descriptive sociology can give him but little aid. And now we coiee to that remaining division of human life which includes the relaxations, pleasures, and amusements filling leisure hours. After considering what training best fits for self-preservation, for the obtainment of sustenance, for the discharge of parental duties, and for the regulation of social and political conduct; we have now to consider what training best fits for the miscellaneous ends not included in these--for the enjoyments of Nature, of Literature, and of the Fine Arts, in all their forms. Postponing them as we do to things that bear more vitally upon human welfare; and bringing everything, as we have, to the test of actual value; it will perhaps be inferred that we are inclined to slight these less essential things. No greater mistake could be made, however. We yield to none in the value we attach to aesthetic culture and its pleasures. Without painting, sculpture, music, poetry, and the emotions produced by natural beauty of every kind, life would lose half its charm. So far from thinking that the training and gratification of the tastes are unimportant, we believe the time will come when they will occupy a much larger share of human life than now. When the forces of Nature have been fully conquered to man's use--when the means of production...

First published in 1861, this seminal work argues that education should be focused on practical and scientific knowledge rather than the classics. Spencer's ideas were highly controversial at the time, but this book helped to lay the groundwork for modern educational theory and is still widely read and debated today. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. The Knowledge Most Worth Having in Teacher Education

Throughout the second half of the twentieth century until his death in 2005, Wayne Booth was one of the most influential literary critics in America and beyond, known worldwide for *The Rhetoric of Fiction* (1961), and hailed as a progressive advocate for rethinking the concept of liberal education in a changing world. His many books and essays remain classic reading for those who wish to understand how fiction communicates ethically, why good ethical criticism as such is a signature human activity to be cherished, and how the human desire to know helps to define who we are, collectively and individually. In this final volume of Booth's selected essays, appropriately titled *The Knowing Most Worth Doing*, after Booth's earlier edited collection, *The Knowledge Most Worth Having* (1967), Walter Jost, in collaboration with the author, has gathered an indispensable collection of his former teacher's thinking across a wide variety of fields and disciplines, from ethics to religion and from rhetorical criticism to the philosophical plurality of possible critical modes. The selections begin with three diverse, profound discussions of the need for plural perspectives in the contemporary world, proceed to accessible yet learned readings of the ethics of literature, and end with wonderful speculations on the nature of, and human need for, religious thought. Gathered from various journals and books over several decades, these "fugitive" essays will prove their enduring value because they speak frankly and without pretensions to problems that continue to plague us, and to aspirations that continue to draw a new generation into the knowing most worth doing. In these discussions, knowledge is understood as an activity and a way of life, one that can be embraced by all people in many different ways.

This book argues that the mythic figure of the zombie, so prevalent and powerful in contemporary culture, provides the opportunity to explore certain social models – such as ‘childhood’ and ‘school’, ‘class’ and ‘family’ – that so deeply underpin educational policy and practice as to be rendered invisible. It brings together authors from a range of disciplines to use contemporary zombie typologies – slave, undead, contagion – to examine the responsiveness of everyday practices of schooling such as literacy, curriculum and pedagogy to the new contexts in which children and young people develop their identities, attitudes to learning, and engage with the many publics that make up their everyday worlds.

How free-market fundamentalists have shifted the focus of higher education to competition, metrics, consumer demand, and return on investment, and why we should change this. A new philosophy of higher education has taken hold in institutions around the world. Its supporters disavow the pursuit of knowledge for its own sake and argue that the only knowledge worth pursuing is that with more or less immediate market value. Every other kind of learning is downgraded, its budget cut. In *Knowledge for Sale*, Lawrence Busch challenges this market-driven approach. The rationale for the current thinking, Busch explains, comes from neoliberal economics, which calls for reorganizing society around the needs of the market. The market-influenced changes to higher education include shifting the cost of education from the state to the individual, turning education from a public good to a private good subject to consumer demand; redefining higher education as a search for the highest-paying job; and turning scholarly research into a competition based on metrics including number of citations and value of grants. Students, administrators, and scholars have begun to think of themselves as economic actors rather than seekers of knowledge. Arguing for active resistance to this takeover, Busch urges us to burst the neoliberal bubble, to imagine a future not dictated by the market, a future in which there is a more educated citizenry and in which the old dichotomies—market and state, nature and culture, and equality and liberty—break down. In this future, universities value learning and not training, scholarship grapples with society's most pressing problems rather than quick fixes for corporate interests, and democracy is enriched by its educated and engaged citizens.

What Knowledge is of Most Worth?

This antiquarian volume contains a comprehensive treatise on democracy and education, being an introduction to the 'philosophy of education'. Written in clear, concise language and full of interesting expositions and thought-provoking assertions, this volume will appeal to those with an interest in the role of education in society, and it would make for a great addition to collections of allied literature. The chapters of this book include: 'Education as a Necessity of Life'; 'Education as a Social Function'; 'Education as Direction'; 'Education as Growth'; 'Preparation, Unfolding, and Formal Discipline'; 'Education as Conservative and Progressive'; 'The Democratic Conception in Education'; 'Aims in Education', etcetera. We are republishing this vintage book now complete with a new prefatory biography of the author.

Involvement in Learning

"This volume addresses the academy's increased interest in contributing to the public good in more than just a superficial way.... The authors of this volume examine an alternative way of thinking that brings more than disciplinary expertise to bear on public issues."--cf. FROM THE SERIES EDITOR.

Saving Higher Education in the Age of Money

Data is at the center of many challenges in system design today. Difficult issues need to be figured out, such as scalability, consistency, reliability, efficiency, and maintainability. In addition, we have an overwhelming variety of tools, including relational databases, NoSQL datastores, stream or batch processors, and message brokers. What are the right choices for your application? How do you make sense of all these buzzwords? In this practical and comprehensive guide, author Martin Kleppmann

helps you navigate this diverse landscape by examining the pros and cons of various technologies for processing and storing data. Software keeps changing, but the fundamental principles remain the same. With this book, software engineers and architects will learn how to apply those ideas in practice, and how to make full use of data in modern applications. Peer under the hood of the systems you already use, and learn how to use and operate them more effectively. Make informed decisions by identifying the strengths and weaknesses of different tools. Navigate the trade-offs around consistency, scalability, fault tolerance, and complexity. Understand the distributed systems research upon which modern databases are built. Peek behind the scenes of major online services, and learn from their architectures.

Knowledge for Sale

In his daring and ground-breaking work, Brady argues that the most satisfactory way to make the general education curriculum a coherent whole is not by bridging between the parts but by recognizing them as integral, logically-related components of larger entities. These "larger entities" are socio-cultural systems. When considering what's worth teaching, administrators and faculty typically have faced issues such as these: For decades we have been in the center of an information explosion. How can we decide what new information to teach, and what old information to exclude to make room for the new? Vast domains of knowledge lie neglected outside the traditional disciplines and subjects. How can these domains be identified, and their relative importance determined? Learning theorists insist that learners must make new knowledge part of a logically-integrated conceptual framework. How can educators help students construct these frameworks? Certain ideas are so powerful they should be introduced early and elaborated year after year. What are these ideas? Until now questions such as these had no answers. But *What's Worth Teaching?* does suggest answers. In clear and thoughtfully crafted language, Brady lays a theoretical foundation for a general education curriculum surpassing in comprehensiveness and coherence anything now offered in America's schools and universities.

What Knowledge is of Most Worth?

Rosemary J. Mundhenk and LuAnn McCracken Fletcher have assembled a remarkable variety of Victorian nonfiction prose, both classic and lesser known. In both their commentary and selection the editors have drawn upon the insights of recent theoretical approaches to literature and culture to present a complex range of responses to Victorian issues, thus inviting modern readers to explore the many voices of the period and reenvision the Victorian era.

Designing Data-Intensive Applications

In 1930, the great Spanish philosopher Jose Ortega y Gasset set forth a program for reforming the modern Spanish university. Aware that the missions of the university are many and often competing, Ortega built his program around a conception of a "general culture" that knows no national boundaries or time limits and could fit into any national system of higher education. His ideas are especially pertinent to contemporary debate in America over curriculum development and the purpose of education. In this volume Ortega sought to answer two essential questions: what is the knowledge most worth knowing by all students and what is the function of the university in a modern democracy? Basing his answers on his own deep personal culture and an extensive knowledge of the various European university systems, Ortega defined four primary missions: the teaching of the learned professions, the fostering of scientific research, training for political leadership, and finally the creation of cultured persons with the ability to make intellectual interpretations of the world. Ortega's understanding of "general culture" is set out in great detail here. He meant an active engagement in ideas and issues that were both historical and contemporary. His concern is with the classical problems of justice, the good society, who should rule, and the responsibilities of citizenship. In his informative and brilliant introduction to this new edition, Clark Kerr, a lifetime student of Ortega's work, analyzes Ortega's ideas in their historical context and speculates on how the great issues he dealt with here can be made contemporary for modern students facing the challenges and uncertainties of the twenty-first century. Mission of the University and its new opening essay will be of interest to educationists, social scientists, and above all the students of this era.

Nietzsche and the Sciences

There are many reasons to be curious about the way people learn, and the past several decades have seen an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of

influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.

RELIGION WORTH HAVING

This collection of important and significant papers examines a wide range of issues. One of the author's main concerns is to clarify the meaning of 'education' and 'quality in education' - a phrase often used in public debate but seldom scrutinized. Long-standing ambiguities latent in the concept of 'liberal education' are also exposed, and Herbert Spencer's question 'What knowledge is of most worth?', vital in the light of the recent vast development of knowledge, is considered. The first section of the collection clarifies different aspects of the concept of education and to reflect upon the difficulties and dilemmas facing teachers who strive to educate their pupils as distinct from just preparing them for examinations. This section concludes with a constructive re-examination of Plato's conception of education with a view to seeing what is acceptable in it instead of just concentrating on what is manifestly unacceptable. The second section is concerned with the role of educational theory in the education of teachers.

Theories Worth Having: And Other Papers

The 'knowledge turn' in curriculum studies has drawn attention to the central role that knowledge of the disciplines plays in education, and to the need for new thinking about how we understand knowledge and knowledge-building. *Knowing History in Schools* explores these issues in the context of teaching and learning history through a dialogue between the eminent sociologist of curriculum Michael Young, and leading figures in history education research and practice from a range of traditions and contexts. With a focus on Young's 'powerful knowledge' theorisation of the curriculum, and on his more recent articulations of the 'powers' of knowledge, this dialogue explores the many complexities posed for history education by the challenge of building children's historical knowledge and understanding. The book builds towards a clarification of how we can best conceptualise knowledge-building in history education. Crucially, it aims to help history education students, history teachers, teacher educators and history curriculum designers navigate the challenges that knowledge-building processes pose for learning history in schools.

Education and the Education of Teachers (International Library of the Philosophy of Education Volume 18)

For centuries, philosophers, theologians, moralists, and ordinary people have asked: How should we live? What makes for a good life? In *The Best Things in Life*, distinguished philosopher Thomas Hurka takes a fresh look at these perennial questions as they arise for us now in the 21st century. Should we value family over career? How do we balance self-interest and serving others? What activities bring us the most joy? While religion, literature, popular psychology, and everyday wisdom all grapple with these questions, philosophy more than anything else uses the tools of reason to make important distinctions, cut away irrelevancies, and distill these issues down to their essentials. Hurka argues that if we are to live a good life, one thing we need to know is which activities and experiences will most likely lead us to happiness and which will keep us from it, while also reminding us that happiness isn't the only thing that makes life good. Hurka explores many topics: four types of good feeling (and the limits of good feeling); how we can improve our baseline level of happiness (making more money, it turns out, isn't the answer); which kinds of knowledge are most worth having; the importance of achieving worthwhile goals; the value of love and friendship; and much more. Unlike many philosophers, he stresses that there isn't just one good in life but many: pleasure, as Epicurus argued, is indeed one, but knowledge, as Socrates contended, is another, as is achievement. And while the great philosophers can help us understand what matters most in life, Hurka shows that we must ultimately decide for ourselves. This delightfully accessible book offers timely guidance on answering the most important question any of us will ever ask: How do we live a good life?

RELIGION WORTH HAVING

England's school system performs below its potential and can improve significantly. This white paper outlines action designed to: tackle the weaknesses in the system; strengthen the status of teachers and teaching; reinforce the standards set by the curriculum and qualifications; give schools back the freedom to determine their own development; make schools more accountable to parents, and help them to learn more quickly and systematically from good practice elsewhere; narrow the gap in attainment between rich and poor. The quality of teachers and teaching is the most important factor in determining how well children do. The Government will continue to raise the quality of new entrants to the profession, reform initial teacher training, develop a network of "teaching schools" to lead training and development, and reduce the bureaucratic burden on schools. Teachers will be given more powers to control bad behaviour. The National Curriculum will be reviewed, specifying a tighter model of knowledge of core subjects so that the Curriculum becomes a benchmark against which school can be judged. Schools will be given more freedom and autonomy, the Academies programme extended and parents will be able to set up "Free Schools" to meet parent demand. Accountability for pupil performance is critical, and much more information will be available to aid understanding of a school's performance. School improvement will be the responsibility of schools, not central government. Funding of schools needs to be fairer and more transparent, and there will be a Pupil Premium to target resources on the most deprived pupils.

Theories Worth Having

Richard Swinburne offers an original treatment of a question at the heart of epistemology: what makes a belief a rational one, or one which the believer is justified in holding? He maps the various totally different and purportedly rival accounts that philosophers give of epistemic justification ('internalist' and 'externalist'), and argues that they are really accounts of different concepts. He distinguishes (as most epistemologists do not) between synchronic justification (justification at a time) and diachronic justification (synchronic justification resulting from adequate investigation) — both internalist and externalist. He argues that most kinds of justification are worth having because (for different reasons) indicative of truth. However, it is only justification of internalist kinds that can guide a believer's actions. Swinburne goes on to show the usefulness of the probability calculus in elucidating how empirical evidence makes beliefs probably true: every proposition has an intrinsic probability (an a priori probability independent of empirical evidence) which may be increased or decreased by empirical evidence. This innovative and challenging book will refresh epistemology and rewrite its agenda.
