Pre-algebra

Designed as a textbook for undergraduate students in various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting.

This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.

McDougal Littell Pre-Algebra Alabama

Contains complete solutions to the problem sets.

Pre-Algebra

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

MCDUGAL LITTELL MIDDLE SCHOOL

Basic Algebra and Advanced Algebra systematically develop concepts and tools in algebra that are vital to every mathematician, whether pure or applied, aspiring or established. Advanced Algebra includes chapters on modern algebra which treat various topics in commutative and noncommutative algebra

and provide introductions to the theory of associative algebras, homological algebras, algebraic number theory, and algebraic geometry. Many examples and hundreds of problems are included, along with hints or complete solutions for most of the problems. Together the two books give the reader a global view of algebra and its role in mathematics as a whole.

Passport to Algebra and Geometry

"This book by Lisa Tauxe and others is a marvelous tool for education and research in Paleomagnetism. Many students in the U.S. and around the world will welcome this publication, which was previously only available via the Internet. Professor Tauxe has performed a service for teaching and research that is utterly unique."—Neil D. Opdyke, University of Florida

Mathematics

Dynamic assessment embeds interaction within the framework of a test-intervene-retest approach to psychoeducational assessment. This book offers an introduction to diagnostic assessors in psychology, education, and speech/language pathology to the basic ideas, principles, and practices of dynamic assessment. Most importantly, the book presents an array of specific procedures developed and used by the authors that can be applied to clients of all ages in both clinical and educational settings. The authors discuss their approach to report-writing, with a number of examples to demonstrate how they incorporate dynamic assessment into a comprehensive approach to assessment. The text concludes with a discussion of issues and questions that need to be considered and addressed. Two appendixes include descriptions of additional tests used by the authors that are adapted for dynamic assessment, as well as information about dynamic assessment procedures developed by others and sources for additional information about this approach.

Pre-Algebra, Grades 6-8 Test Prep Workbook

By the time your child reaches middle school Math, he or she should have a foundational knowledge of the subject. Now it's time to move onto pre-Algebra education. This more challenging topic may seem daunting, but with the help of Prentice Hall Mathematics, it doesn't have to be. This curriculum for homeschooling naturally follows the primary Math program, enVisionMATH. Each Course of Prentice Hall Mathematics feels like the natural next step in your child's Math education. When you use the Prentice Hall Mathematics program, you have four options: Course 1, 2 and 3, and Algebra Readiness. The final installment will round out your child's pre-Algebra knowledge, when needed, provide a smooth transition between Courses and help him or her fully grasp the subject. The curriculum for homeschooling covers algebraic expressions and integers, linear functions, one-step equations and inequalities, and area and volume. Prentice Hall Mathematics: Algebra Readiness is designed to help your child ease into the next level of Algebra. First, you'll introduce the concept, which your child can follow along with using Math problems. Next your child will have to apply the new ideas he or she has learned. Finally, your child will use the information beyond simple problem solving, tackling accelerated Math concepts. This program is designed to help your child focus on these key areas: Use algebra concepts to solve complex word problems. Recognize and understand square root and root symbols. Explain why a certain equation is the correct one to solve a problem. Use proper equations to solve real-world problems. Calculate area and volume of a shape. Using the materials in Prentice Hall Mathematics: Algebra Readiness, you'll be able to guide your child through the curriculum. The problems included in the program keep your child engaged and learning, and the teacher materials keep you up to date on your lessons. For more information on the materials included in Prentice Hall Mathematics: Algebra Readiness, visit the Features and Benefits page.

Pre-Algebra Test Booklet

Bayesian Networks, the result of the convergence of artificial intelligence with statistics, are growing in popularity. Their versatility and modelling power is now employed across a variety of fields for the purposes of analysis, simulation, prediction and diagnosis. This book provides a general introduction to Bayesian networks, defining and illustrating the basic concepts with pedagogical examples and twenty real-life case studies drawn from a range of fields including medicine, computing, natural sciences and engineering. Designed to help analysts, engineers, scientists and professionals taking part in complex decision processes to successfully implement Bayesian networks, this book equips readers with proven methods to generate, calibrate, evaluate and validate Bayesian networks. The book: Provides the tools to overcome common practical challenges such as the treatment of missing input data, interaction with

experts and decision makers, determination of the optimal granularity and size of the model. Highlights the strengths of Bayesian networks whilst also presenting a discussion of their limitations. Compares Bayesian networks with other modelling techniques such as neural networks, fuzzy logic and fault trees. Describes, for ease of comparison, the main features of the major Bayesian network software packages: Netica, Hugin, Elvira and Discoverer, from the point of view of the user. Offers a historical perspective on the subject and analyses future directions for research. Written by leading experts with practical experience of applying Bayesian networks in finance, banking, medicine, robotics, civil engineering, geology, geography, genetics, forensic science, ecology, and industry, the book has much to offer both practitioners and researchers involved in statistical analysis or modelling in any of these fields.

Pre-Algebra Grade 8 Test Pack 2nd Edition

Includes: Print Student Edition

Pre-Algebra Oklahoma Test Prep Answer Key

With the same design and feature sets as the market leading Precalculus, 8/e, this addition to the Larson Precalculus series provides both students and instructors with sound, consistently structured explanations of the mathematical concepts. Designed for a two-term course, this text contains the features that have made Precalculus a complete solution for both students and instructors: interesting applications, cutting-edge design, and innovative technology combined with an abundance of carefully written exercises. In addition to a brief algebra review and the core precalculus topics, PRECALCULUS WITH LIMITS covers analytic geometry in three dimensions and introduces concepts covered in calculus. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Pre-Algebra

"Educational Research: Planning, Conducting, and Evaluating Quantitative and Qualitative Research offers a truly balanced, inclusive, and integrated overview of the processes involved in educational research. This text first examines the general steps in the research process and then details the procedures for conducting specific types of quantitative, qualitative, and mixed methods studies. Direct guidance on reading research is offered throughout the text, and interactive features provide opportunities for practice."--Publisher's description.

Using the principles of standard precautions, the nurse would wear gloves in what nursing interventions?

The nurse is preparing to take vital sign in an alert client admitted to the hospital with dehydration secondary to vomiting and diarrhea. What is the best method used to assess the client's temperature?

A nurse obtained a client's pulse and found the rate to be above normal. The nurse document this

findings as

Which of the following actions should the nurse take to use a wide base support when assisting a client to get up in a chair?

A client had oral surgery following a motor vehicle accident. The nurse assessing the client finds the skin flushed and warm. Which of the following would be the best method to take the client's body temperature?

A client who is unconscious needs frequent mouth care. When performing a mouth care, the best position of a client is

A client is hospitalized for the first time, which of the following actions ensure the safety of the client?

A walk-in client enters into the clinic with a chief complaint of abdominal pain and diarrhea. The nurse takes the client's vital sign hereafter. What phrase of nursing process is being implemented here by the nurse?

It is best describe as a systematic, rational method of planning and providing nursing care for individual, families, group and community

Exchange of gases takes place in which of the following organ?

The Chamber of the heart that receives oxygenated blood from the lungs is the?

A muscular enlarge pouch or sac that lies slightly to the left which is used for temporary storage of food...

The ability of the body to defend itself against scientific invading agent such as bacteria, toxin, viruses and foreign body

Hormones secreted by Islets of Langerhans

It is a transparent membrane that focuses the light that enters the eyes to the retina.

Which of the following cluster of data belong to Maslow's hierarchy of needs

This is characterized by severe symptoms relatively of short duration

Which of the following is the nurse's role in the health promotion

It is describe as a collection of people who share some attributes of their lives.

Five teaspoon is equivalent to how many milliliters (ml)?

Which of the following is the abbreviation of drops?

The abbreviation for micro drop is...

Which of the following is the appropriate meaning of CBR?

1 tsp is equals to how many drops?

1 cup is equals to how many ounces?

The nurse must verify the client's identity before administration of medication. Which of the following is the safest way to identify the client?

The nurse prepares to administer buccal medication. The medicine should be placed...

The nurse administers cleansing enema. The common position for this procedure is...

A client complains of difficulty of swallowing, when the nurse try to administer capsule medication.

Which of the following measures the nurse should do?

Which of the following is the appropriate route of administration for insulin?

The nurse is ordered to administer ampicillin capsule TIP p.o. The nurse should give the medication...

Back Care is best describe as

It refers to the preparation of the bed with a new set of linens

Which of the following is the most important purpose of handwashing

What should be done in order to prevent contaminating of the environment in bed making?

The most important purpose of cleansing bed bath is

Which of the following technique involves the sense of sight?

The first techniques used examining the abdomen of a client is

A technique in physical examination that is use to assess the movement of air through the tracheo-bronchial tree

An instrument used for auscultation is

Resonance is best describe as

The best position for examining the rectum is

The nurse asked the client to read the Snellen chart. Which of the following is tested

Another name for knee-chest position is

The nurse prepare IM injection that is irritating to the subcutaneous tissue. Which of the following is the best action in order to prevent tracking of the medication

Which term defines the following: All body systems must be in a condition of balance for the body to survive and work properly.

Where is the ulna bone in relation to the metacarpals?

What one of the following is not a type of fat?

What cells in the body are responsible for waste removal?

Which of the following is the medical term for the knee?

How many layers is the skin composed of?

What is another term that describes the gene's genetic makeup?

Bile from the liver is stored and concentrated in what organ?

Which of the following organs is responsible for absorbing vitamin K from the digestive tract?

What term defines the mass-weighted average of the isotope masses that make up an element?

Somatic cells undergo which process to produce more

12 What is the pH of an acid?

What is the protective layer around nerves called?

Which part of the nervous system regulates voluntary actions?

Which of the following is NOT considered a mammal?

Which of the following bases is not found in DNA?

Which of the following is not an example of a polar bond?

Through the processes of photosynthesis and oxygen release,_____ provide energy that supports plant growth and crop output.

Which law describes the relationship between volume and temperature with constant pressure and volume?

What is the name of the muscle used to aid in respiration in humans?

Which of the following choices have an alkaline base?

Which of the following organs are NOT included in the thoracic cavity?

Which of the following infections is caused by a bacterium?

20 What is the name of the appendages that receive communication from other cells?

Carbohydrates are broken down in the digestive system. Where does this process begin?

20 Which of the following is NOT a function of the kidneys?

After blood leaves the right ventricle where does it travel to next?

A person has blood type O-. What blood type may this person receive blood from?

What is the name of the tissue that separates the lower ventricles of the heart?

What type of muscle is myocardium (heart muscle)?

What uses mechanisms that direct impulses toward a nerve cell's body?

Which of the following is NOT an action that the endocrine system is responsible for?

Which of the following is NOT part of the lymphatic system?

30 The atomic number is the same as?

Which term describes the destruction of red blood

30 Which of the following is NOT part of the appendicular skeleton?

39 The process of molecules from a solution containing a high concentration of water molecules to one containing a lower concentration through the partially permeable membrane of a cell.

The most appropriate nursing order for a patient who develops dyspnea and shortness of breath would be...

The nurse observes that Mr. Adams begins to have increased difficulty breathing. She elevates the head of the bed to the high Fowler position, which decreases his respiratory distress. The nurse documents this breathing as

The physician orders a platelet count to be performed on Mrs. Smith after breakfast. The nurse is responsible for

Answer: C. A platelet count evaluates the number of platelets in the circulating blood volume.

The nurse is responsible for giving the patient breakfast at the scheduled time. The physician is responsible for instructing the patient about the test and for writing the order for the test.

Mrs. Mitchell has been given a copy of her diet. The nurse discusses the foods allowed on a 500-mg low sodium diet. These include

Answer: B. Mashed potatoes and broiled chicken are low in natural sodium chloride. Ham, olives, and chicken bouillon contain large amounts of sodium and are contraindicated on a low sodium diet.

The physician orders a maintenance dose of 5,000 units of subcutaneous heparin (an anticoagulant) daily. Nursing responsibilities for Mrs. Mitchell now include

The four main concepts common to nursing that appear in each of the current conceptual models are

Answer: D. The focus concepts that have been accepted by all theorists as the focus of nursing practice from the time of Florence Nightingale include the person receiving nursing care, his environment, his health on the health illness continuum, and the nursing actions necessary to meet his needs.

In Maslow's hierarchy of physiologic needs, the human need of greatest priority is

Answer: D. Maslow, who defined a need as a satisfaction whose absence causes illness, considered oxygen to be the most important physiologic need; without it, human life could not exist. According to this theory, other physiologic needs (including food, water, elimination, shelter, rest and sleep, activity and temperature regulation) must be met before proceeding to the next hierarchical levels on psychosocial needs.

The family of an accident victim who has been declared brain-dead seems amenable to organ donation. What should the nurse do?

Answer: B. The brain-dead patient's family needs support and reassurance in making a decision about organ donation. Because transplants are done within hours of death, decisions about organ donation must be made as soon as possible. However, the family's concerns must be addressed

before members are asked to sign a consent form. The body of an organ donor is available for burial. A new head nurse on a unit is distressed about the poor staffing on the 11 p.m. to 7 a.m. shift. What should she do?

Answer: C. Although a new head nurse should initially spend time observing the unit for its strengths and weakness, she should take action if a problem threatens patient safety. In this case, the supervisor is the resource person to approach.

Which of the following principles of primary nursing has proven the most satisfying to the patient and nurse?

Answer: D. Studies have shown that patients and nurses both respond well to primary nursing care units. Patients feel less anxious and isolated and more secure because they are allowed to participate in planning their own care. Nurses feel personal satisfaction, much of it related to positive feedback from the patients. They also seem to gain a greater sense of achievement and esprit de corps

If nurse administers an injection to a patient who refuses that injection, she has committed

Answer: A. Assault is the unjustifiable attempt or threat to touch or injure another person. Battery is the unlawful touching of another person or the carrying out of threatened physical harm. Thus, any act that a nurse performs on the patient against his will is considered assault and battery

If patient asks the nurse her opinion about a particular physicians and the nurse replies that the physician is incompetent, the nurse could be held liable for

Answer: A. Oral communication that injures an individual's reputation is considered slander. Written communication that does the same is considered libel.

A registered nurse reaches to answer the telephone on a busy pediatric unit, momentarily turning away from a 3 month-old infant she has been weighing. The infant falls off the scale, suffering a skull fracture. The nurse could be charged with

Answer: D. Malpractice is defined as injurious or unprofessional actions that harm another. It involves professional misconduct, such as omission or commission of an act that a reasonable and prudent nurse would or would not do. In this example, the standard of care

Which of the following is an example of nursing malpractice?

Which of the following signs and symptoms would the nurse expect to find when assessing an Asian patient for postoperative pain following abdominal surgery?

A patient is admitted to the hospital with complaints of nausea, vomiting, diarrhea, and severe abdominal pain. Which of the following would immediately alert the nurse that the patient has bleeding from the GI tract?

The correct sequence for assessing the abdomen is

High-pitched gurgles head over the right lower quadrant are

A patient about to undergo abdominal inspection is best placed in which of the following positions?

For a rectal examination, the patient can be directed to assume which of the following positions?

During a Romberg test, the nurse asks the patient to assume which position?

If a patient's blood pressure is 150/96, his pulse pressure is

A patient is kept off food and fluids for 10 hours before surgery. His oral temperature at 8 a.m. is 99.8 F (37.7 C) This temperature reading probably indicates

Which of the following parameters should be checked when assessing respirations?

A 38-year old patient's vital signs at 8 a.m. are axillary temperature 99.6 F (37.6 C); pulse rate, 88; respiratory rate, 30. Which findings should be reported?

Palpating the midclavicular line is the correct technique for assessing

Answer: D. The apical pulse (the pulse at the apex of the heart) is located on the midclavicular line at the fourth, fifth, or sixth intercostal space. Baseline vital signs include pulse rate, temperature, respiratory rate, and blood pressure. Blood pressure is typically assessed at the antecubital fossa, and respiratory rate is assessed best by observing chest movement with each inspiration and expiration

The absence of which pulse may not be a significant finding when a patient is admitted to the hospital?

Which of the following patients is at greatest risk for developing pressure ulcers?

Answer: B. Pressure ulcers are most likely to develop in patients with impaired mental status, mobility, activity level, nutrition, circulation and bladder or bowel control. Age is also a factor. Thus, the 88-year old incontinent patient who has impaired nutrition (from gastric cancer) and is confined to bed is at greater risk.

The physician orders the administration of high- humidity oxygen by face mask and placement of the patient in a high Fowler's position. After assessing Mrs. Paul, the nurse writes the following nursing diagnosis: Impaired gas exchange related to increased secretions. Which of the following nursing

interventions has the greatest potential for improving this situation?

Answer: A. Adequate hydration thins and loosens pulmonary secretions and also helps to replace fluids lost from elevated temperature, diaphoresis, dehydration and dyspnea. High- humidity air and chest physiotherapy help liquefy and mobilize secretions.

Which of the following statement is incorrect about a patient with dysphagia?

To assess the kidney function of a patient with an indwelling urinary (Foley) catheter, the nurse measures his hourly urine output. She should notify the physician if the urine output is

Certain substances increase the amount of urine produced. These include

Answer: A. Fluids containing caffeine have a diuretic effect. Beets and urinary analgesics, such as pyridium, can color urine red. Kaopectate is an anti diarrheal medication.

A male patient who had surgery 2 days ago for head and neck cancer is about to make his first attempt to ambulate outside his room. The nurse notes that he is steady on his feet and that his vision was unaffected by the surgery. Which of the following nursing interventions would be appropriate?

A patient has exacerbation of chronic obstructive pulmonary disease (COPD) manifested by shortness of breath; orthopnea: thick, tenacious secretions; and a dry hacking cough. An appropriate nursing diagnosis would be

Mrs. Lim begins to cry as the nurse discusses hair loss. The best response would be

An additional Vitamin C is required during all of the following periods except

Answer: B. Additional Vitamin C is needed in growth periods, such as infancy and childhood, and during pregnancy to supply demands for fetal growth and maternal tissues. Other conditions requiring extra vitamin C include wound healing, fever, infection and stress.

A prescribed amount of oxygen is needed for a patient with COPD to prevent

- A. Cardiac arrest related to increased partial pressure of carbon dioxide in arterial blood (PaCO₂)
- B. Circulatory overload due to hypervolemia
- C. Respiratory excitement
- D. Inhibition of the respiratory hypoxic stimulus

Answer: D. Delivery of more than 2 liters of oxygen per minute to a patient with chronic obstructive pulmonary disease (COPD), who is usually in a state of compensated respiratory acidosis (retaining carbon dioxide (CO₂)), can inhibit the hypoxic stimulus for respiration. An increased partial pressure of carbon dioxide in arterial blood (PaCO₂) would not initially result in cardiac arrest. Circulatory overload and respiratory excitement have no relevance to the question

After 1 week of hospitalization, Mr. Gray develops hypokalemia. Which of the following is the most significant symptom of his disorder?

Which of the following nursing interventions promotes patient safety?

- A. Asses the patient's ability to ambulate and transfer from a bed to a chair
- B. Demonstrate the signal system to the patient
- C. Check to see that the patient is wearing his identification band
- D. All of the above

Studies have shown that about 40% of patients fall out of bed despite the use of side rails; this has led to which of the following conclusions?

Examples of patients suffering from impaired awareness include all of the following except

Answer: C. A patient who cannot care for himself at home does not necessarily have impaired awareness; he may simply have some degree of immobility.

The most common injury among elderly persons is:

- A. Atheroscleotic changes in the blood vessels
- B. Increased incidence of gallbladder disease
- C. Urinary Tract Infection
- D. Hip fracture

Answer: D. Hip fracture, the most common injury among elderly persons, usually results from osteoporosis. The other answers are diseases that can occur in the elderly from physiologic changes.

The most common psychogenic disorder among elderly person is

Answer: A. Sleep disturbances, inability to concentrate and decreased appetite are symptoms of depression, the most common psychogenic disorder among elderly persons. Other symptoms include diminished memory, apathy, disinterest in appearance, withdrawal, and irritability. Depression typically begins before the onset of old age and usually is caused by psychosocial, genetic, or biochemical factors

Which of the following vascular system changes results from aging?

Which of the following is the most common cause of dementia among elderly persons?

The nurse's most important legal responsibility after a patient's death in a hospital is

Answer: C. The nurse is legally responsible for labeling the corpse when death occurs in the hospital. She may be involved in obtaining consent for an autopsy or notifying the coroner or medical examiner of a patient's death; however, she is not legally responsible for performing these functions. The attending physician may need information from the nurse to complete the death certificate, but he is responsible for issuing it.

Before rigor mortis occurs, the nurse is responsible for:

- A. Providing a complete bath and dressing change
- B. Placing one pillow under the body's head and shoulders
- C. Removing the body's clothing

and wrapping the body in a shroud D. Allowing the body to relax normally

Answer: B. The nurse must place a pillow under the decreased person's head and shoulders to prevent blood from settling in the face and discoloring it. She is required to bathe only soiled areas of the body since the mortician will wash the entire body. Before wrapping the body in a shroud, the nurse places a clean gown on the body and closes the eyes and mouth.

When a patient in the terminal stages of lung cancer begins to exhibit loss of consciousness, a major nursing priority is to

Answer: A. Ensuring the patient's safety is the most essential action at this time. The other nursing actions may be necessary but are not a major priority.

Which element in the circular chain of infection can be eliminated by preserving skin integrity?

Which of the following will probably result in a break in sterile technique for respiratory isolation?

Which of the following patients is at greater risk for contracting an infection?

Effective hand washing requires the use of

Which of the following procedures always requires surgical asepsis?

Answer: B. The urinary system is normally free of microorganisms except at the urinary meatus. Any procedure that involves entering this system must use surgically aseptic measures to maintain a bacteria-free state.

Sterile technique is used whenever

Answer. C. All invasive procedures, including surgery, catheter insertion, and administration of parenteral therapy, require sterile technique to maintain a sterile environment. All equipment must be sterile, and the nurse and the physician must wear sterile gloves and maintain surgical asepsis.

In the operating room, the nurse and

Which of the following constitutes a break in sterile technique while preparing a sterile field for a dressing change?

A natural body defense that plays an active role in preventing infection is

All of the following statement are true about donning sterile gloves except

When removing a contaminated gown, the nurse should be careful that the first thing she touches is the

All of the following measures are recommended to prevent pressure ulcers except

Which of the following blood tests should be performed before a blood transfusion?

The primary purpose of a platelet count is to evaluate the

Answer. A. Platelets are disk-shaped cells that are essential for blood coagulation. A platelet count determines the number of thrombocytes in blood available for promoting hemostasis and assisting with blood coagulation after injury. It also is used to evaluate the patient's potential for bleeding; however, this is not its primary purpose. The normal count ranges from 150,000 to 350,000/mm³. A count of 100,000/mm³ or less indicates a potential for bleeding; count of less than 20,000/mm³ is associated with spontaneous bleeding.

Which of the following white blood cell (WBC) counts clearly indicates leukocytosis?

Which of the following statements about chest X-ray is false?

The most appropriate time for the nurse to obtain a sputum specimen for culture is

Answer. A. Obtaining a sputum specimen early in this morning ensures an adequate supply of bacteria for culturing and decreases the risk of contamination from food or medication.

A patient with no known allergies is to receive penicillin every 6 hours. When administering the medication, the nurse observes a fine rash on the patient's skin. The most appropriate nursing action would be to

The correct method for determining the vastus lateralis site for I.M. injection is to

The appropriate needle size for insulin injection is

The appropriate needle gauge for intradermal injection

The physician orders gr 10 of aspirin for a patient. The equivalent dose in milligrams is

Which of the following is a sign or symptom of a hemolytic reaction to blood transfusion?

Which of the following conditions may require fluid restriction?

All of the following are common signs and symptoms of phlebitis except

Answer: D. Phlebitis, the inflammation of a vein, can be caused by chemical irritants (I.V. solutions or medications), mechanical irritants (the needle or catheter used during venipuncture or cannulation), or a localized allergic reaction to the needle or catheter. Signs and symptoms of phlebitis include pain or discomfort, edema and heat at the I.V. insertion site, and a red streak going up the arm or leg from the I.V. insertion site.

The best way of determining whether a patient has learned to instill ear medication properly is for the nurse to

Which of the following types of medications can be administered via gastrostomy tube?

A patient who develops hives after receiving an antibiotic is exhibiting drug

A patient has returned to his room after femoral arteriography. All of the following are appropriate nursing interventions except

The nurse explains to a patient that a cough

An infected patient has chills and begins shivering. The best nursing intervention is to

A clinical nurse specialist is a nurse who has

The purpose of increasing urine acidity through dietary means is to

Clay colored stools indicate

In which step of the nursing process would the nurse ask a patient if the medication she administered relieved his pain?

Answer: D. In the evaluation step of the nursing process, the nurse must decide whether the patient has achieved the expected outcome that was identified in the planning phase.

All of the following are good sources of vitamin A except

Which of the following is a primary nursing intervention necessary for all patients with a Foley Catheter in place?

The ELISA test is used to

The two blood vessels most commonly used for TPN infusion are the

Effective skin disinfection before a surgical procedure includes which of the following methods?

When transferring a patient from a bed to a chair, the nurse should use which muscles to avoid back injury?

Thrombophlebitis typically develops in patients with which of the following conditions?

In a recumbent, immobilized patient, lung ventilation can become altered, leading to such respiratory complications as

Immobility impairs bladder elimination, resulting in such disorders as

Intro

Which of the following is best describes about viruses?? a Facultative intracellular parasites b Protein core surrounded by nucleic acid c Contain double (Or) single stranded RNA/DNA d Main opposition from humoral immunity

Which of the following describes about viruses but not bacteria?? a Undergo binary fission b Relatively large in size c Replicates with host mechanism d Can replicate without host

which is true about Capsids of virus?? a Carries the genetic material b Self assembles c Icosahedral form has variable size d Helical form has a defined sets of subunits

Virus spikes are commonly associated with which of the following?? a Non-enveloped Viruses b Glycoproteins c d Inability to cause haemagglutination

Prions are best described as which of the following ?? a Cannot replicate without a helper virus b Contain nucleic acid surrounded by infectious protien capsid

a Entry replication and tissue tropism are at the same site b Enter at one site and cause disease and spread c causes equal symptoms in children and adult d None of the above

2 Interferons are best describes by which of the following?? a Beta Interferons produced by leukocytes b Induced by viruses only c Inhibit protein synthesis mechanism d Gamma interferons are induced by fibroblasts and T-cells

Which of the following is double stranded DNA vir a Picornauridae b paramyxoviridae c parvoviridae d polyomaviridae

a Humoral immunity b Cell-mediated immunity c Innate immunity d All the above

How are viruses differ from bacteria?? a Viruses do not replicate by binary fission b Viruses are smaller in size c Viruses are obligate intercellularly d Both a & b

Which of the following best describes the varicella- Zoster virus vaccine?? a Killed vaccine b Live attenuated vaccine c Component vaccine d There is no vaccine for varicella zoster
