Taste: Media and Interior Design

This book traces and explores the evolution of taste from a design perspective: what it is, how it works, and what it does. Karin Tehve examines taste primarily through its recursive relationship to media. This ongoing process changes the relationship between designers and the public, and our understanding of the relationship of individuals to their social contexts. Through an analysis of taste, design is understood to be an active constituent of social life, not as autonomous from it. This book reclaims a term long dismissed from interior design and unveils taste's role as a powerful social and political agent within systems of aesthetics, affecting both its producers and consumers. Each chapter discusses a taste concept or definition, analyzes its reciprocal relationship with media, and explores its implications for interior design. Illustrated with 70 images, taste's relationship to media is viewed through a variety of different lenses, including books, photography, magazines, internet, social media and algorithms. Written primarily for students and scholars of interior design and related design fields, this book will be a helpful resource for all those interested in the question of taste, and is an invitation to produce and consume all media critically.

Maximizing reader insights into interior design as a conceptual way of thinking, which is about ideas and how they are formulated. The major themes of this book are the seven concepts of planning, circulation, 3D, construction, materials, colour and lighting, which covers the entire spectrum of a designer's activity. Analysing design concepts from the view of the range of possibilities that the designer can examine and eventually decide by choice and conclusive belief the appropriate course of action to take in forming that particular concept, the formation and implementation of these concepts is taken in this book to aid the designer in his/her professional task of completing a design proposal to the client. The purpose of this book is to prepare designers to focus on each concept independently as much as possible, whilst acknowledging relative connections without unwarranted influences unfairly dictating a conceptual bias, and is about that part of the design process called conceptual analysis. It is assumed that the site, location, building and orientation, as well as the client's brief of activities and needs have been digested and analysed to provide the data upon which the design process can begin. Designed as a highly visual illustrative book, as the interior design medium demands, the hands-on creative process of designing is detailed with original drawn illustrations. Concentrating on the conceptual process of designing interiors, and defining what these concepts are, this book will help the designer to organise his/her process of designing and to sharpen the links between the various skill bases necessary to do the job. This book will be stimulating for students and instructors alike and is aimed at any student who maybe majoring in interior design, interior architecture, architecture, design thinking or furniture design. It could also be a useful reference for students of design management and design leadership.

Sustainable Design for Interior Environments

For hundreds of thousands of years, humanity focused on space as a location. Today, space is not just a destination-it is a domain, an ecosystem, an enabler of progress, and quite possibly the most valuable industry of the twenty-first century. Three things you need to know: Space as an industry is notoriously complex-which means it's misunderstood. Space influences and benefits nearly every other industry on the planet. Accessing space has never been easier. Space investor and entrepreneur Robert C. Jacobson provides a comprehensive overview of this spectacular industry, allowing everyone on Earth to understand the integral role space plays in our lives and how it will continue to transform the world. Over one hundred industry experts share exclusive insights, presenting a 360-degree view of the wide-ranging space industry, its emerging opportunities, investment potential, benefits on Earth, and more. Space Is Open for Business provides a framework for those outside of the industry to understand the critical context that led to the commercial movement known as NewSpace, illustrating how private sector trailblazers have evolved this \$350 billion global industry and how NewSpace's exponential growth will lead our world into a new era of progress. Foreword by David S. Rose Founder, New York Angels | Associate Founder, Singularity University "A sweeping guide that will inspire you to think big about space, the space economy, and your role within it." Matthew C. Weinzierl, Ph.D., Harvard Business School

A Matter of Art

The first publication which systematically groups the most significant texts written or else specifically revised by the author accompanied by exemplificative sketches.

Writings on Architecture

Josef Paul Kleihues is one of the great, internationally renowned German architects of the present day, who has had a far-reaching impact on both theory and practice of construction since the 1970s. Early on, Berlin was the geographical focal point of his work: his most important building projects in this city include the main workshop of the Berliner Stadtreinigung, the Kantdreieck Tower, the reconstruction of the Museum Hamburger Bahnhof as well as the Liebermann house and the Sommer house on Pariser Platz. On the occasion of Josef Paul Kleihues' seventieth birthday, this richly illustrated book for the first time systematically and comprehensively introduces the world famous architect's life achievements. Renowned authors direct attention to the different facets of his important work, thus providing fascinating insights into the architectural history and theory of the past decades. Text in English and German.

Luigi Snozzi

A lo largo de las cuatro conversaciones que el lector tiene entre sus manos, Álvaro Siza, Benedetta Tagliabue, José Antonio Ramos y Luigi Snozzi manifiestan reiteradamente esa tensión existente entre experiencias e intenciones que pone en movimiento el tiempo histórico, en este caso, a través de la obra de arquitectura. En sus palabras se respira el deseo de querer vivir dialogando con la historia, con el lugar, con las personas y con los acontecimientos. De ahí que recuerdos y esperanzas, experiencias e intenciones, confluyan en el lugar a través de una arquitectura viva y vivificante que hace del mismo una auténtica encrucijada espacio-temporal. La encrucijada abre nuevos caminos y, con ello, nos coloca frente a la alternativa, la disyuntiva e incluso el dilema. De esta forma, lo posible se presenta ante nosotros abriéndole la puerta al futuro, por lo que de este arduo proceso configurativo se obtendrán nuevas experiencias que a su vez permitirán la llegada de nuevas intenciones. Sin embargo, sólo quien tiene presente a lo largo del camino su punto de partida será capaz de descubrir, durante su recorrido, la ruta que debe seguir para poder llegar a su destino. Se trata, por tanto, de un futuro que no olvida su pasado, el camino recorrido, sino que con su presencia lo ilumina, le da sentido y lo enriquece. A partir de las actuaciones de estos cuatro arquitectos, en lugares como Lisboa, Barcelona, Alcázar de San Juan y Monte Carasso, se desarrollan unas conversaciones que se ramifican permitiéndonos

abordar no sólo otras obras de ellos mismos, sino algunas reflexiones acerca de la forma que ellos tienen de entender la arquitectura, el lugar o el límite

Architettura in Ticino

Alberto Ponis was born in Genoa in 1933 and studied at Florence University, where he qualified as an architect in 1960. He worked in London with Erno Goldfinger and Denys Lasdun in 1960-64 under the strong and lasting influence also of the movements of Modernism and New Brutalism then prevailing in the theoretical discourse in British architecture. His own studio Ponis established in 1964 in Palau, on the Italian island of Sardinia, working since on private, public and urban planning commissions. In 1990 he was awarded the INARCH prize for the Village of "Stazzo Pulcheddu" in Palau. Ponis often refers to the natural conditions and the social history of Sardinia when talking about his work in architecture. Besides of nature and society, he has also extensively studied the "stazzo," Sardinia's typical rural building type. This thorough knowledge of conditions, traditions and requirements are the foundation of an oeuvre of more than 300 residential buildings. Each of them deeply rooted in its environment and connected with the land and other dwellings by the "sentiero," the path leading to and from the house. Ponis's houses are meant to be summer homes, their inert warmth reflecting the architect's fundamental optimism. They show a natural modesty and simplicity rather than their owner's wealth or status. They express the architect's great formal skills and sensitivity. They are inconceivable without the Sardinian landscape and history and the island seems to have been expecting just these particular buildings, merging naturally with nature. The new book "Alberto Ponis Sardinia" is the first comprehensive monograph on this highly interesting and original yet little known architect. In five lavishly illustrated sections it documents his biography and early work, his extensive research on Sardinia, eight selected buildings created between 1965-98 that make traceable the evolution of Ponis's work, his philosophy (Thoughts and Forms), and a concluding essay on the essence of his architecture.

The book tackles a number of challenging questions: How can we conceptualize architectural objects and practices without falling into the divides architecture/society, nature/culture, materiality/meaning? How can we prevent these abstractions from continuing to blind architectural theory? What is the alternative to critical architecture? Mapping controversies is a research method and teaching philosophy that allows divides to be crossed. It offers a new methodology for following debates surrounding contested urban knowledge. Engaging in explorations of on-going and recent controversies and re-visiting some well-known debates, the analysis foregrounds, traces and maps the changing sets of positions triggered by design: the 2012 Olympics stadium in London, the Welsh parliament in Cardiff, the Heathrow airport runway extension, the Sydney Opera House, the Eiffel Tower. By mobilizing digital technologies and new computational design techniques we are able to visualize the variety of factors that impinge on design and track actors' trajectories, changing groupings, concerns and modalities of action. The book places architecture at the intersection of the human and the nonhuman, the particular and the general. It allows its networks to be re-established and to run between local and global, social

and technical. Mapping controversies can be extrapolated to a wide range of complex phenomena of hybrid nature.

El lugar, entre experiencias e intenciones

Landscapes and Structures is a striking visual tour of Switzerland's public structural landmarks through the personal view of the internationally renowned civil engineer Jürg Conzett. The book is published in conjunction with the Swiss pavilion at the Twelfth International Architecture Exhibition of the Venice Biennale, which Conzett curated. Civil engineering structures comprise bridges, tunnels, passageways, and other built transport routes; and Conzett and photographer Martin Linsi aimed to showcase examples that demonstrate architectural aspirations and a special relationship to the landscape. The book's twenty chapters highlight such works as the Sittertobel railway bridge and the Susten mountain pass that contribute to pertinent discussions in design and engineering--including questions of design within the cultural heritage movement, the reciprocal relationship between a townscape and its structures, and the tradition of relying on local materials and craftsmanship. As a whole, the book serves as an insider's tour of how Switzerland's most notable public structures highlight and compliment the landscape.

Der Baumeister

Rykwert looks at the complex story of the city since the industrial revolution. Drawing on sociology, social, economic and political history and their interactions with the architectural history, he refers to Shanghai as much as to Los Angeles, Rio as London, Melbourne as Paris, in looking at past developments and for models for the future.

Domus

This book examines the houses designed by Alvaro Siza, one of the masters of contemporary architecture. The 28 villas represent an important aspect of Siza's career. Each construction is narrated by Alvaro Siza through his short poetic writings, a technical description, and a series of sketches. Also

included are accounts written by Siza's clients, which bear witness to the complex dialogue behind the design of each house. The volume also features two visual essays based on a selection of drawings by Siza and impeccable photographs of his work.

Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction, the book's analytical framework rests on Frampton's close readings of key French and German, and English sources from the eighteenth century to the present. Kenneth Frampton's long-awaited follow-up to his classic *A Critical History of Modern Architecture* is certain to influence any future debate on the evolution of modern architecture. *Studies in Tectonic Culture* is nothing less than a rethinking of the entire modern architectural tradition. The notion of tectonics as employed by Frampton—the focus on architecture as a constructional craft—constitutes a direct challenge to current mainstream thinking on the artistic limits of postmodernism, and suggests a convincing alternative. Indeed, Frampton argues, modern architecture is invariably as much about structure and construction as it is about space and abstract form. Composed of ten essays and an epilogue that trace the history of contemporary form as an evolving poetic of structure and construction, the book's analytical framework rests on Frampton's close readings of key French and German, and English sources from the eighteenth century to the present. He clarifies the various turns that structural engineering and tectonic imagination have taken in the work of such architects as Perret, Wright, Kahn, Scarpa, and Mies, and shows how both constructional form and material character were integral to an evolving architectural expression of their work. Frampton also demonstrates that the way in which these elements are articulated from one work to the next provides a basis upon which to evaluate the works as a whole. This is especially evident in his consideration of the work of Perret, Mies, and Kahn and the continuities in their thought and attitudes that linked them to the past. Frampton considers the conscious cultivation of the tectonic tradition in architecture as an essential element in the future development of architectural form, casting a critical new light on the entire issue of modernity and on the place of much work that has passed as "avant-garde." When spontaneous student protests erupted in Hong Kong on 28 September 2014 as a reaction to proposed changes in the electoral process, the global media was rife with images not only of the protesters themselves, but also the myriad informal structures and designs they had created. Barri-cades, shelter and sculptures were constructed from everyday objects, the umbrellas that coined the movement's name were used for protection from police enforcement. The exhibition presents this act of civil disobedience through the objects that were spawned by the movement, illustrating that design not only shapes and defines products, but can function as an agent of change in politics, communication and social innovation. 00Exhibition: Vitra Design Museum, Weil, Germany (12.03.2016-29.01.2017)

The Inhabited Pathway

A central goal of transportation is the delivery of safe and efficient services with minimal environmental impact. In practice, though, human mobility has flourished while nature has suffered. Awareness of

the environmental impacts of roads is increasing, yet information remains scarce for those interested in studying, understanding, or minimizing the ecological effects of roads and vehicles. Road Ecology addresses that shortcoming by elevating previously localized and fragmented knowledge into a broad and inclusive framework for understanding and developing solutions. The book brings together fourteen leading ecologists and transportation experts to articulate state-of-the-science road ecology principles, and presents specific examples that demonstrate the application of those principles. Diverse theories, concepts, and models in the new field of road ecology are integrated to establish a coherent framework for transportation policy, planning, and projects. Topics examined include: foundations of road ecology roads, vehicles, and transportation planning vegetation and roadsides wildlife populations and mitigation water, sediment, and chemical flows aquatic ecosystems wind, noise, and atmospheric effects road networks and landscape fragmentation Road Ecology links ecological theories and concepts with transportation planning, engineering, and travel behavior. With more than 100 illustrations and examples from around the world, it is an indispensable and pioneering work for anyone involved with transportation, including practitioners and planners in state and province transportation departments, federal agencies, and nongovernmental organizations. The book also opens up an important new research frontier for ecologists.

Architecture in Switzerland

Among volumes of theories that are becoming more and more vague, contemporary architecture is convulsively hunting for legitimization. Thus, ethics (among design ideas reduced to expressions of mere preferences and planning actions with uncertain, yet concrete, consequences) has unexpectedly become architecture's authentic constitutive and epistemological dimension. Certainly, this has not happened in deontological terms or in terms permeated with the excessive exhibition of good feelings that often limit this question. Rather, a responsible personal engagement and consistent actions--according to the bold challenge in this book--are the keystones to expose the reigning ethics of intention and to solve the apparent dispute between theory and practice. This book follows a path that, going back to the philosophical-architectonic dialogue between Ernesto Nathan Rogers and Enzo Paci, uses everyday experience and looks for a design theory that is finally honestly responsible.
