Philosophy of Physics - Philosophy of Physics by Physics Videos by Eugene Khutoryansky 527,907 views 8 years ago 20 minutes - From Newton and Maxwell to General Relativity, Quantum Mechanics, Dark Matter, and Dark Energy. The nature of fundamental ...

Maxwell's Laws consisted of just one set of rules that not only explained all of electricity and magnetism, but also explained all of optics and the behavior of light.

The more our knowledge advances, the greater the number of seemingly unrelated phenomena we are able to explain using fewer and fewer laws.

If this is the case, could this one true set of fundamental laws of physics provide us with a single unified explanation for everything in the Universe?

And we already know how to explain many chemical reactions entirely in terms of underlying interactions of the atoms and molecules, which behave in accordance to the known laws of physics And there are many cases where viewing a phenomena in terms of the laws of physics can actually take us further away from understanding it.

These logic gates are based on the operation of transistors. and the operation of these transistors is based on the laws of quantum mechanics.

"Dark matter" deals with the fact that the amount of matter we are able to observe in each Galaxy is far less than what it would need to possess in order for gravity to hold the Galaxy together, given the

Galaxy's rate of rotation.
