Food insecurity presents a serious and growing challenge in Canada's northern and remote Aboriginal communities. In 2011, off-reserve Aboriginal households in Canada were about twice as likely as other Canadian households to be food insecure. Finding lasting solutions will require the involvement not just of policy-makers but of those most affected by food insecurity: people living in the North. In recognition of this problem, the Minister of Health, on behalf of Health Canada, asked the Council of Canadian Academies to appoint an expert panel to assess the knowledge of the factors influencing food security in the Canadian North and of the health implications of food insecurity for northern Aboriginal populations. The Expert Panel on the State of Knowledge of Food Security in Northern Canada found that food insecurity among northern Aboriginal peoples requires urgent attention in order to mitigate impacts on health and well-being. *Aboriginal Food Security in Northern Canada: An Assessment of the State of Knowledge* offers policy-makers a holistic starting-point for discussion and problem-solving. It also provides evidence and options to researchers and communities engaging in local responses.

"This book compares selected Romans of the late Republic with American Founders in the style of Plutarch, encouraging readers to rethink how we view heroes and villains and their conceptions of republicanism. Through entertaining yet informative short comparisons, this volume demonstrates the humanity of heroes and villains from different times and places through their often idiosyncratic similarities and differences. Readers gain not only a fuller understanding of the late Roman and early American Republics and their leaders, but also an appreciation for comparative biography in its ability to make connections across the human experience. The book provides a way to connect two different areas of study, focusing on how republicanism shaped both Romans and American Founders and providing a previously unexplored contribution to a growing trend of broadening historical exposure. In doing so, Baughman and Poston demonstrate the continued need for connecting different fields of history, while also helping students understand their connection to the ancient past. This book is suitable for students and scholars interested in the late Roman and the early American Republics, and also appeals to readers of varied interests across historical times and places, particularly those studying the connections between the classical past and modern world"--

Efficiency is one of the most frequently used terms in thermodynamics, and it indicates how well an energy conversion or process is accomplished. Efficiency is also one of the most frequently misused terms in thermodynamics and is often a source of misunderstanding. This is because efficiency is often used without being properly defined first. This book intends to provide a comprehensive evaluation of various efficiencies used for energy transfer and conversion systems including steady-flow energy devices (turbines, compressors, pumps, nozzles, heat exchangers, etc.), various power plants, cogeneration plants, and refrigeration systems. The book will cover first-law (energy based) and second-law (exergy based) efficiencies and provide a comprehensive understanding of their implications. It will help minimize the widespread misuse of efficiencies among students and researchers in energy field by using an intuitive and unified approach for defining efficiencies. The book will be particularly useful for a clear understanding of second law (exergy) efficiencies for various systems. It may serve as a reference book to the researchers in energy field. The definitions and concepts developed in the book will be explained through illustrative examples.

Practical Methods for Analysis and Design of HV Installation Grounding Systems gives readers a basic understanding of the modeling characteristics of the major components of a complex grounding system. One by one, the author develops and analyzes each component as a standalone element, but then puts them together, considering their mutual disposition, or so-called proximity effect. This is the first book to enable the making and analysis of the most complex grounding systems that are typical for HV substations located in urban areas that uses relatively simple mathematical operations instead of modern computers. Since the presented methods enable problem-solving for more complex issues than the ones solved using National, IEC and/or IEEE standards, this book can be considered as an appendix to these standards. Develops general equations of lumped parameter ladder circuits Includes the analytical expression for determination of ground fault current distribution for a fault anywhere along a cable line Presents measurement and analytical methods for the determination of actual ground fault current distribution for high-voltage substations located in urban areas Provides the analytical procedure for the determination of the critical ground fault position for faults appearing in outgoing transmission lines Defines testing procedure for the correct evaluation of grounding systems of substations located in urban areas

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War,

Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's *Traite de langue amharique* (1936), but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove to be useful for the Semitist as well as for the general linguist.

How to read photographs: the new essential primer In 1973, John Szarkowski, the revered director of photography at the Museum of Modern Art, New York, published his classic volume Looking at Photographs: 100 Pictures from the Collection of The Museum of Modern Art, offering a wide-ranging and accessible history of photography and an engaging primer. Now, American photographer and educator Stephen Frailey has borrowed Szarkowski's concept and format for his new book, Looking at Photography: 100 great images and a page of text for each. Frailey picks up where Szarkowski left off, updating the project to take stock of significant photographs from the early 1980s to the present day. Through a focused discussion on each individual work, Frailey articulates the themes and emerging sensibility of contemporary photography. Artists featured in this volume include Tina Barney, Jeff Wall, Steven Meisel, Nan Goldin, Helmut Newton, Martin Parr, Tim Walker and Wolfgang Tillmans, among others. Stephen Frailey (born 1957) is a photographer, writer, curator, editor and educator. His work has been shown, published and collected internationally. He served as the Chair of Photography at the School of Visual Arts in New York from 1998 to 2018, and is the co-chair of its MPS Fashion Photography Program. In 2003 he founded the Auction for Photographic Education in Afghanistan to create a photography department at Kabul University. In 2007 he founded the photography magazine Dear Dave, and is its Editor in Chief. He is currently the Director of Education at Red Hook Labs.

Dance and the visual arts have long since entered a relationship, yet an authoritative portrayal of the points at which they intersect has yet to be compiled.
