begin by putting all of the infrastructure in place  
dropped thirty millimeters around the full perimeter of the pyramid base  
placing the blocks straight into water  
worked with copper tools by shaping the blocks in the water  
get the outer blocks precisely placed  
raised above the precinct water level by building a lift shaft  
build two separated gates at the bottom of the shaft  
hold the water in the shaft  
line the shaft with dried clay  
made watertight by lining the floor and walls  
raising the multi-ton blocks hundreds of feet into the air  
moving the blocks to the pyramids  
see the well-preserved causeway at the pyramid
