Centripetal Force Definition V

Centripetal Force

The Centripetal Force

Absolute Quantity of a Centripetal Force

Definition 7

Definition 8 the Motive Quantity of the Centripetal Force

Motive Accelerative and Absolute Forces

Absolute Space

Distinguish Absolute from Relative Motion

Law Too

Law 3

Corollary 1

Corollary 3

And in Free Spaces To Go Forwards in Infinitum with Motion Continually Accelerated Which Is Absurd and Contrary to the First Law for by the First Law the System Ought To Continue in Its State of Rest or of Moving Uniformly Forwards in a Right Line and Therefore the Bodies Must Equally Press

the Obstacle and Be Equally Attracted One by the Other I Made the Experiment on the Lodestone and Iron if these Placed Apart in Proper Vessels I Made To Float by One another in Standing Water neither of Them Will Propel the Other but by Being Equally Attracted They Will Sustain each Other's Pressure and Rest at Last in an Equilibrium so the Gravitation between the Earth and Its Parts Is Mutual with the Earth if I Be Cut by any Plane Eg

So the Gravitation between the Earth and Its Parts Is Mutual with the Earth if I Be Cut by any Plane Eg into Two Parts Egs and Eg I and Their Weights One towards the Other Will Be Mutually Equal for F by another Plane Hk Parallel to the Former Eq the Greater Part E Gi Is Cut into Two Eg Kh and H Ki Where of H Ki Is Equal to the Part Ef G First Cut Off It Is Evident at the Middle Part Eg Kh Will Have no Prepend by Its Proper Weight towards either Side but Will Hang as It Were and Rest in an Equilibrium

Where There Are Sending Directly or Obliquely as the Velocity of the Perpendicular Ascent of the Weight to the Velocity of the Hand That Draws the Rope Will Sustain the Weight in Clocks and Suchlike Instruments Made Up from a Combination of Wheels the Contrary Forces That Promote and Impede the Motion of the Wheels if They Are Inversely as the Velocities of the Parts of the Wheel on Which They Are Impressed Will Mutually Sustain each Other the Force of the Screw To Press a Body Is to the Force of the Hand That Turns the Handles by Which It Is Moved as the Circular Velocity of the Handle in that Part Where It Is Impelled by the Hand Is to the Progressive Velocity of the Screw With Which the Parts of the Wood Yield to the Wedge in the Direction of Lines Perpendicular to the Sides of the Wedge and the Light Account Is To Be Given of Machines the Power and Use of Machines Consists Only in this that by Diminishing the Velocity We May Augment the Force and the Contrary from Whence in all Sorts of Proper Machines We Have the Solution of this Problem To Move a Given Weight with a Given Power or with a Given Force To Overcome any Other Given Resistance for if Machines Are So Contrived that the Velocities of the Agent

We Have the Solution of this Problem To Move a Given Weight with a Given Power or with a Given Force To Overcome any Other Given Resistance for if Machines Are So Contrived that the Velocities of the Agent and Resistant Are Inversely as Their Forces and that the Agent Will Just Sustain the Resistance but with a Greater Disparity of Velocity Will Overcome It so that if the Disparity of Velocities Is So Great as To Overcome All that Resistance Which Commonly Arises Either from the Friction of Contentious Bodies as They Slide by One another or from the Cohesion of Continuous Bodies That Are To Be Separated or from the Weights of Bodies To Be Raised

From the Product of the Velocities of Its Several Parts and the Forces of Resisting Arising from the Friction Cohesion Weight and Acceleration of those Parts the Action and Reaction in the Use of all Sorts of Machines Will Be Found Always Equal to One another and So Far the Action Is Propagated by the Intervening Instruments and at Last Impressed upon the Resisting Body the Ultimate Action Will Always Be Contrary to the Reaction
