The Man Who Plants Trees

This is an extraordinary book about trees. It's an account by a veteran science journalist that ranges to the limits of scientific understanding: how trees produce aerosols for protection and 'warnings'; the curative effects of 'forest bathing' in Japan; or the impact of trees in fertilizing ocean plankton. There is even science to show that trees are connected to the stars. Trees and forests are far more than just plants: they have myriad functions that help maintain the atmosphere and biosphere. As climate change increases, they will become even more critical to buffer the effects of warmer temperatures, clean our water and air and provide food. If they remain standing. The global forest is also in crisis, and when the oldest trees in the world suddenly start dying - across North America, Europe, the Amazon - it's time to pay attention. At the heart of this remarkable exploration of the power of trees is the amazing story of one man, a shade tree farmer named David Milarch, and his quest to clone the oldest and largest trees - from the California redwoods to the oaks of Ireland - to protect the ancient genetics and use them to reforest the planet.

The Man Who Planted Trees

The Man Who Planted Trees is the inspiring story of David Milarch's quest to clone the biggest trees on the planet in order to save our forests and ecosystem—as well as a hopeful lesson about how each of us has the ability to make a difference. “When is the best time to plant a tree? Twenty years ago. The second best time? Today.”—Chinese proverb Twenty years ago, David Milarch, a northern Michigan nurseryman with a penchant for hard living, had a vision: angels came to tell him that the earth was in trouble. Its trees were dying, and without them, human life was in jeopardy. The solution, they told him, was to clone the champion trees of the world—the largest, the hardiest, the ones that had survived millennia and were most resilient to climate change—and create a kind of Noah's ark of tree genetics. Without knowing if the message had any basis in science, or why he'd been chosen for this task, Milarch began his mission of cloning the world's great trees. Many scientists and tree experts told him it couldn't be done, but, twenty years later, his team has successfully cloned some of the world's oldest trees—among them giant redwoods and sequoias. They have also grown seedlings from the oldest tree in the world, the bristlecone pine Methuselah. When New York Times journalist Jim Robbins came upon Milarch's story, he was fascinated but had his doubts. Yet over several years, listening to Milarch and talking to scientists, he came to realize that there is so much we do not yet know about trees: how they die, how they communicate, the myriad crucial ways they filter water and air and otherwise support life on Earth. It became clear that as the planet changes, trees and forest are essential to assuring its survival. Praise for The Man Who Planted Trees “This is a story of miracles and obsession and love and survival. Told with Jim Robbins's signature clarity and eye for telling detail, The Man Who Planted Trees is also the most hopeful book I've read in years. I kept thinking of the end of Saint Francis's wonderful prayer, ‘And may God bless you with enough foolishness to believe that you can make a difference in the world, so that you can do what others claim cannot be done.’”—Alexandra Fuller, author of *Don't Let's Go to the Dogs Tonight* “Absorbing, eloquent, and loving . . . While Robbins's tone is urgent, it doesn't compromise his crystal-clear science. . . . Even the smallest details here are fascinating.”—Dominique Browning, *The New York Times Book Review* “The great poet W. S. Merwin once wrote, ‘On the last day of the world I would want to plant a tree.’ It's good to see, in this lovely volume, that some folks are getting a head start!”—Bill McKibben, author of *Eaarth: Making a Life on a Tough New Planet* “Inspiring . . . Robbins lucidly summarizes the importance and value of trees to planet Earth and all humanity.”—*The Ecologist* “ ‘Imagine a world without trees,’ writes journalist Jim Robbins. It's nearly impossible after reading *The Man Who Planted Trees*, in which Robbins weaves science and spirituality as he explores the bounty these plants offer the planet.”—Audubon

Save the Planet

"Save the Planet: How we can contribute" is a compelling and enlightening guide that addresses the pressing issue of climate change. In this meticulously crafted book, the author, an experienced environmental scientist, offers a holistic perspective on the intricate web of challenges posed by climate change. The urgency to act is conveyed through an exploration of the causes, impacts, and potential solutions to this global crisis. The author delves into the scientific intricacies of climate change, unraveling the mechanisms of greenhouse gas emissions, the role of deforestation, and the consequences of industrialization. While acknowledging the severity of the situation, the book

transcends a mere narrative of despair, providing a beacon of hope through practical strategies. The reader is equipped with a roadmap for personal and collective action, ranging from adopting renewable energy sources to advocating for environmental policies.

The Man Who Planted Trees

A solitary man plants a forest over many years, rejuvenating a barren wasteland.

The Tree of Life

What if the literary form of the Bible derived its pattern from the elementary process of creation? Is there an underlying symbolic form to the book? The Tree of Life is an analysis of this form and compares it to the operations of the intellect. These operations are the process by which we come to know what is. It also corresponds to the metaphysical elements, which are the core of our being. What becomes evident is that there is a form to human consciousness.

Social Justice and the Power of Compassion

Social Justice and the Power of Compassion looks at how a single person, or a small organization, working at the grassroots level can make great strides in helping the marginalized and disenfranchised. Marguerite Guzman Bouvard weaves the personal stories of the founders and directors of such organizations as the Polaris Project, MADRE, and the Harpswell Foundation to show how they have dealt with social problems of many kinds that have been invisible for too long. From dealing with climate change to giving housing and giving medical care to the homeless these people and their organizations have created models that have been replicated around the country and successfully given widespread attention to these important issues.

Hexa

L'espoir est une graine qu'il faut semer sans cesse, une génération après l'autre. Hexa sait qu'elle ne pourra pas élever elle-même l'enfant qu'elle s'apprête à mettre au monde. Mais elle tentera tout pour le connaître, lui transmettre son amour pour la forêt. Sandrine et Gabriel n'ont pas le choix d'élever leur fille dans une société aux frontières étanches, pourtant ils y ménageront des brèches. Elle plante des arbres, et lui, des idées. Quant à Thalie, beaucoup repose sur ses épaules, mais elle ne le sait pas encore. Il lui faudra d'abord apprendre à vivre, à ancrer ses pieds dans la terre meuble du Nord, à comprendre les choix déchirants de celles qui l'ont précédée.

A Sanctuary of Trees

As author Gene Logsdon puts it, "We are all tree huggers." But not just for sentimental or even environmental reasons. Humans have always depended on trees for our food, shelter, livelihood, and safety. In many ways, despite the Grimm's fairy-tale version of the dark, menacing forest, most people still hold a deep cultural love of woodland settings, and feel right at home in the woods. In this latest book, A Sanctuary of Trees, Logsdon offers a loving tribute to the woods, tracing the roots of his own home groves in Ohio back to the Native Americans and revealing his own history and experiences living in many locations, each of which was different, yet inextricably linked with trees and the natural world. Whether as an adolescent studying at a seminary or as a journalist living just outside Philadelphia's city limits, Gene has always lived and worked close to the woods, and his curiosity and keen sense of observation have taught him valuable lessons about a wide variety of trees: their distinct characteristics and the multiple benefits and uses they have. In addition to imparting many fascinating practical details of woods wisdom, A Sanctuary of Trees is infused with a philosophy and descriptive lyricism that is born from the author's passionate and lifelong relationship with nature: There is a point at which the tree shudders before it begins its descent. Then slowly it tips, picks up speed, often with a kind of wailing death cry from rending wood fibers, and hits the ground with a whump that literally shakes the earth underfoot. The air, in the aftermath, seems to shimmy and shiver, as if saturated with static electricity. Then follows an eerie silence, the absolute end to a very long life. Fitting squarely into the long and proud tradition of American nature writing, A Sanctuary of Trees also reflects Gene Logsdon's unique personality and perspective, which have marked him over the course of his two dozen previous books as the authentic voice of rural life and traditions.

The Mushroom at the End of the World

What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a weed that grows in human-disturbed forests across the northern hemisphere. Through its ability to nurture trees, matsutake helps forests to grow in daunting places. It is also an edible delicacy in Japan, where it sometimes commands astronomical prices. In all its contradictions, matsutake offers insights into areas far beyond just mushrooms and addresses a crucial question: what manages to live in the ruins we have made? A tale of diversity within our damaged landscapes, *The Mushroom at the End of the World* follows one of the strangest commodity chains of our times to explore the unexpected corners of capitalism. Here, we witness the varied and peculiar worlds of matsutake commerce: the worlds of Japanese gourmets, capitalist traders, Hmong jungle fighters, industrial forests, Yi Chinese goat herders, Finnish nature guides, and more. These companions also lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human destruction. By investigating one of the world's most sought-after fungi, *The Mushroom at the End of the World* presents an original examination into the relation between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

Good Strategy/Bad Strategy

When Richard Rumelt's *Good Strategy/Bad Strategy* was published in 2011, it immediately struck a chord, calling out as bad strategy the mish-mash of pop culture, motivational slogans and business buzz speak so often and misleadingly masquerading as the real thing. Since then, his original and pragmatic ideas have won fans around the world and continue to help readers to recognise and avoid the elements of bad strategy and adopt good, action-oriented strategies that honestly acknowledge the challenges being faced and offer straightforward approaches to overcoming them. Strategy should not be equated with ambition, leadership, vision or planning; rather, it is coherent action backed by an argument. For Rumelt, the heart of good strategy is insight into the hidden power in any situation, and into an appropriate response - whether launching a new product, fighting a war or putting a man on the moon. Drawing on examples of the good and the bad from across all sectors and all ages, he shows how this insight can be cultivated with a wide variety of tools that lead to better thinking and better strategy, strategy that cuts through the hype and gets results.

A History of the University of Manchester, 1973–90

This electronic version has been made available under a Creative Commons (BY-NC-ND) open access license. Frank and entertaining account of the University of Manchester's struggle to meet the Government's demands for the rapid expansion of higher education in the 1950s and the 1960s. Looks at the University's ambitious building program: the controversial attempts to reform its constitution and improve its communications amid demands for greater democracy in the workplace, the struggle to retain its old pre-eminence in a competitive world where new 'green field' universities were rivalling older civic institutions. Tells the story, not just from the point of view of administrators and academics, but also from those of students and support staff (such as secretaries, technicians and engineers). Uses, not only official records, but also student newspapers, political pamphlets, and reminiscences collected through interviews conducted by an experienced oral historian. The only book on the University of Manchester as a whole.

Economics for Real People

London's Urban Landscape is the first major study of a global city to adopt a materialist perspective and stress the significance of place and the built environment to the urban landscape. Edited by Christopher Tilley, the volume is inspired by phenomenological thinking and presents fine-grained ethnographies of the practices of everyday life in London. In doing so, it charts a unique perspective on the city that integrates ethnographies of daily life with an analysis of material culture. The first part of the volume considers the residential sphere of urban life, discussing in detailed case studies ordinary residential streets, housing estates, suburbia and London's mobile 'linear village' of houseboats. The second part analyses the public sphere, including ethnographies of markets, a park, the social rhythms of a taxi rank, and graffiti and street art. *London's Urban Landscape* returns us to the everyday lives of people and the manner in which they understand their lives. The deeply sensuous character of the embodied experience of the city is invoked in the thick descriptions of entangled relationships between people and places, and the paths of movement between them. What stories do door bells and house facades tell us about contemporary life in a Victorian terrace? How do antiques acquire value and significance

in a market? How does living in a concrete megastructure relate to the lives of the people who dwell there? These and a host of other questions are addressed in this fascinating book that will appeal widely to all readers interested in London or contemporary urban life.

London's Urban Landscape

This is the academic Age of the Neoliberal Arts. Campuses—as places characterized by democratic debate and controversy, wide ranges of opinion typical of vibrant public spheres, and service to the larger society—are everywhere being creatively destroyed in order to accord with market and military models befitting the academic-industrial complex. While it has become increasingly clear that facilitating the sustainability movement is the great 21st century educational challenge at hand, this book asserts that it is both a dangerous and criminal development today that sustainability in higher education has come to be defined by the complex-friendly “green campus” initiatives of science, technology, engineering and management programs. By contrast, *Greening the Academy: Ecopedagogy Through the Liberal Arts* takes the standpoints of those working for environmental and ecological justice in order to critique the unsustainable disciplinary limitations within the humanities and social sciences, as well as provide tactical reconstructive openings toward an empowered liberal arts for sustainability. *Greening the Academy* thus hopes to speak back with a collective demand that sustainability education be defined as a critical and moral vocation comprised of the diverse types of humanistic study that will benefit the well-being of our emerging planetary community and its numerous common locales.

Greening the Academy

From the Orange Prize-winning author of ‘Half of a Yellow Sun’ come twelve dazzling stories that turn a penetrating eye on the ties that bind men and women, parents and children, Nigeria and the West.

The Thing Around Your Neck

A biologist reveals the secret world hidden in a single square meter of old-growth forest—a finalist for the Pulitzer Prize and the Pen/E.O. Wilson Literary Science Writing Award Combining elegant writing with scientific expertise, *The Forest Unseen* “injects much-needed vibrancy into the stuffy world of nature writing” (Outside, “The Outdoor Books That Shaped the Last Decade”) In this wholly original book, biologist David Haskell uses a one- square-meter patch of old-growth Tennessee forest as a window onto the entire natural world. Visiting it almost daily for one year to trace nature's path through the seasons, he brings the forest and its inhabitants to vivid life. Each of this book's short chapters begins with a simple observation: a salamander scuttling across the leaf litter; the first blossom of spring wildflowers. From these, Haskell spins a brilliant web of biology and ecology, explaining the science that binds together the tiniest microbes and the largest mammals and describing the ecosystems that have cycled for thousands- sometimes millions-of years. Each visit to the forest presents a nature story in miniature as Haskell elegantly teases out the intricate relationships that order the creatures and plants that call it home. Written with remarkable grace and empathy, *The Forest Unseen* is a grand tour of nature in all its profundity. Haskell is a perfect guide into the world that exists beneath our feet and beyond our backyards.

The Forest Unseen

How should we treat non-human animals? In this immensely powerful and influential book (now with a new introduction by Sapiens author Yuval Noah Harari), the renowned moral philosopher Peter Singer addresses this simple question with trenchant, dispassionate reasoning. Accompanied by the disturbing evidence of factory farms and laboratories, his answers triggered the birth of the animal rights movement. ‘An extraordinary book which has had extraordinary effects... Widely known as the bible of the animal liberation movement’ Independent on Sunday In the decades since this landmark classic first appeared, some public attitudes to animals may have changed but our continued abuse of animals in factory farms and as tools for research shows that the underlying ideas Singer exposes as ethically indefensible are still dominating the way we treat animals. As Yuval Harari’s brilliantly argued introduction makes clear, this book is as relevant now as the day it was written.

Animal Liberation

A fascinating investigation into the miraculous world of birds and the powerful—and surprising—ways they enrich our lives and sustain the planet Our relationship to birds is different from our relationship

to any other wild creatures. They are everywhere and we love to watch them, listen to them, keep them as pets, wear their feathers, even converse with them. Birds, Jim Robbins posits, are our most vital connection to nature. They compel us to look to the skies, literally and metaphorically; draw us out into nature to seek their beauty; and let us experience vicariously what it is like to be weightless. Birds have helped us in many of our endeavors: learning to fly, providing clothing and food, and helping us better understand the human brain and body. And they even have much to teach us about being human. A natural storyteller, Robbins illuminates how qualities unique to birds make them invaluable to humankind—from the Australian brush turkey, which helped scientists discover how dinosaurs first flew, to the eagles in Washington D.C. that rehabilitated the troubled teenagers placed in charge of their care. From the “good luck” ravens in England to the superb lyrebird, whose song is so sophisticated it can mimic koalas, crying babies and chainsaws, Robbins shows our close relationship with birds, the ways in which they are imperiled and how we must fight to save them for the sake of both the planet and humankind. Jim Robbins has written for the New York Times for more than thirty-five years, as well as numerous other magazines including Audubon, Condé Nast Traveler, BBC Future, Smithsonian and Vanity Fair. He is the author of several books including *The Man Who Planted Trees* and *Last Refuge: The Environmental Showdown in the American West*. ‘Fittingly for a work about birds and what they can teach us, *The Wonder of Birds* soars beyond its putative subject into realms once regarded as mystical.’ —Fiona Capp, *The Sydney Morning Herald* ‘A must-read, conveying much necessary information in easily accessible form and awakening one’s consciousness to what might otherwise be taken for granted ... *The Wonder of Birds* reads like the story of a kid let loose in a candy store and given free rein to sample. That is one of its strengths: the convert’s view gives wide appeal to those who might never have known birds well.’ —Bernd Heinrich, *Wall Street Journal*

The Wonder of Birds

"David Harvey examines the internal contradictions within the flow of capital that have precipitated recent crises. While the contradictions have made capitalism flexible and resilient, they also contain the seeds of systemic catastrophe"--

Seventeen Contradictions and the End of Capitalism

Globalization's Contradictions

In the midst of spiraling ecological devastation, multispecies feminist theorist Donna J. Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants. She eschews referring to our current epoch as the Anthropocene, preferring to conceptualize it as what she calls the Chthulucene, as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in tentacular practices. The Chthulucene, Haraway explains, requires sym-poiesis, or making-with, rather than auto-poiesis, or self-making. Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that

would provide the means to building more livable futures. Theoretically and methodologically driven by the signifier SF—string figures, science fact, science fiction, speculative feminism, speculative fabulation, so far—*Staying with the Trouble* further cements Haraway's reputation as one of the most daring and original thinkers of our time.

Staying with the Trouble

The second volume of writings by Los Angeles artist Mike Kelley, focusing on his own work. What John C. Welchman calls the "blazing network of focused confluences" from which Mike Kelley's styles are generated is on display in all its diversity in this second volume of the artist's writings. The first volume, *Foul Perfection*, contained thematic essays and writings about other artists; this collection concentrates on Kelley's own work, ranging from texts in "voices" that grew out of scripts for performance pieces to expository critical and autobiographical writings. *Minor Histories* organizes Kelley's writings into five sections. "Statements" consists of twenty pieces produced between 1984 and 2002 (most of which were written to accompany exhibitions), including "Ajax," which draws on Homer, Colgate- Palmolive, and Longinus to present its eponymous hero; "Some Aesthetic High Points," an exercise in autobiography that counters the standard artist bio included in catalogs and press releases; and a sequence of "creative writings" that use mass cultural tropes in concert with high art mannerisms—approximating in prose the visual styles that characterize Kelley's artwork. "Video Statements and Proposals" are introductions to videos made by Kelley and other artists, including Paul McCarthy and Bob Flanagan and Sheree Rose. "Image-Texts" offers writings that accompany or are part of artworks and installations. This section includes "A Stopgap Measure," Kelley's zestful millennial essay in social satire, and "Meet John Doe," a collage of appropriated texts. "Architecture" features an discussion of Kelley's Educational Complex (1995) and an interview in which he reflects on the role of architecture in his work. Finally, "Ufology" considers the aesthetics and sexuality of space as manifested by UFO sightings and abduction scenarios.

Minor Histories

Out of a lifetime of study of the ancient Near East, Professor Olmstead has gathered previously unknown material into the story of the life, times, and thought of the Persians, told for the first time from the Persian rather than the traditional Greek point of view. "The fullest and most reliable presentation of the history of the Persian Empire in existence."—M. Rostovtzeff

The Ins and Outs of Selective Secondary Schools

Essential reading for students and practitioners of urban design, this collection of essays introduces the 6 dimensions of urban design through a range of the most important classic and contemporary key texts. Urban design as a form of place making has become an increasingly significant area of academic endeavour, of public policy and professional practice. Compiled by the authors of the best selling *Public Places Urban Spaces*, this indispensable guide includes all the crucial definitions and various understandings of the subject, as well as a practical look at how to implement urban design that readers will need to refer to time and time again. Uniquely, the selections of essays that include the works of Gehl, Jacobs, and Cullen, are presented substantially in their original form, and the truly accessible dip-in-and-out format will enable readers to form a deeper, practical understanding of urban design.

History of the Persian Empire

Across half a Galaxy, the Terran Empire maintains its sovereignty with the consent of the governed. It is a peaceful reign, held by compact and not by conquest. Again and again, when rebellion threatens the Terran Peace, the natives of the rebellious world have turned against their own people and sided with the men of Terra; not from fear, but from a sense of dedication. There has never been open war. The battle for these worlds is fought in the minds of a few men who stand between worlds; bound to one world by interest, loyalties and allegiance; bound to the other by love. Such a world is Wolf. Such a man was Race Cargill of the Terran Secret Service.

Urban Design Reader

Spanning 25 years of serious writing on hip-hop by noted scholars and mainstream journalists, this comprehensive anthology includes observations and critiques on groundbreaking hip-hop recordings.

The Door Through Space

A “fascinating overview” of neurofeedback and its potential benefits for treating depression, autism, epilepsy, and other conditions (Discover). Since *A Symphony in the Brain* was first published, the scientific understanding of our bodies, brains, and minds has taken remarkable leaps. From neurofeedback with functional magnetic resonance imaging equipment, to the use of radio waves, to biofeedback of the heart and breath and coverage of biofeedback by health insurance plans, this expanded and updated edition of the groundbreaking book traces the fascinating untold story of the development of biofeedback. Discovered by a small corps of research scientists, this alternative treatment allows a patient to see real-time measurements of their bodily processes. Its advocates claim biofeedback can treat epilepsy, autism, attention deficit disorder, addictions, and depression with no drugs or side effects; bring patients out of vegetative states; and even improve golf scores or an opera singer’s voice. But biofeedback has faced battles for acceptance in the conservative medical world despite positive signs that it could revolutionize the way a diverse range of medical and psychological problems are treated. Offering case studies, accessible scientific explanations, and dramatic personal accounts, this book explores the possibilities for the future of our health. “Robbins details the fascinating medical history of the therapy, tracing it back to French physician Paul Broca’s discovery of the region in the brain where speech originates. At the heart of this riveting story are the people whose lives have been transformed by neurofeedback, from the doctors and psychologists who employ it to the patients who have undergone treatment.” —Publishers Weekly

That's the Joint!

Throughout history, the mysterious dark skies above us have inspired our imaginations in countless ways, influencing our endeavours in science and philosophy, religion, literature and art. *Heavenly Treasures* is a truly beautiful book showing the richness of astronomical theories and illustrations in Western civilization through the ages, exploring their evolution, and comparing ancient and modern throughout. From Greek verse, mediaeval manuscripts and Victorian poetry to spacecraft photographs and computer-generated star charts, the unprecedented wealth of these portrayals is quite breathtaking.

A Symphony in the Brain

Hal Wallis (1898-1986) might not be as well known as David O. Selznick or Samuel Goldwyn, but the films he produced—*Casablanca*, *Jezebel*, *Now, Voyager*, *The Life of Emile Zola*, *Becket*, *True Grit*, and many other classics (as well as scores of Elvis movies)—have certainly endured. As producer of numerous films, Wallis made an indelible mark on the course of America’s film industry, but his contributions are often overlooked. Bernard Dick offers the first comprehensive assessment of the producer’s incredible career. A former office boy and salesman, Wallis first engaged with the film business as the manager of a Los Angeles movie theater in 1922. He attracted the notice of the Warner brothers, who hired him as a publicity assistant. Within three months he was director of the department, and appointments to studio manager and production executive quickly followed. Wallis went on to oversee dozens of productions and formed his own production company in 1944. Dick draws on numerous sources such as Wallis’s personal production files and exclusive interviews with many of his contemporaries to finally tell the full story of his illustrious career. Dick combines his knowledge of behind-the-scenes Hollywood with fascinating anecdotes to create a portrait of one of Hollywood’s early power players.

Celestial Treasury

The Sunday Times bestseller *Shortlisted for the Wainwright Prize* A New Statesman and Spectator Book of the Year 'This book calls for nothing less than a revolution in the future of food' Kate Raworth From the bestselling author of *Feral*, a breathtaking first glimpse of a new future for food and for humanity Farming is the world's greatest cause of environmental destruction - and the one we are least prepared to talk about. We criticise urban sprawl, but farming sprawls across thirty times as much land. We have ploughed, fenced and grazed great tracts of the planet, felling forests, killing wildlife, and poisoning rivers and oceans to feed ourselves. Yet millions still go hungry. Now the food system itself is beginning to falter. But, as George Monbiot shows us in this brilliant, bracingly original new book, we can resolve the biggest of our dilemmas and feed the world without devouring the planet. *Regenesi*s is a breathtaking vision of a new future for food and for humanity. Drawing on astonishing advances in soil ecology, Monbiot reveals how our changing understanding of the world beneath our feet could allow us to grow more food with less farming. He meets the people who are unlocking these methods,

from the fruit and vegetable grower revolutionising our understanding of fertility; through breeders of perennial grains, liberating the land from ploughs and poisons; to the scientists pioneering new ways to grow protein and fat. Together, they show how the tiniest life forms could help us make peace with the planet, restore its living systems, and replace the age of extinction with an age of regeneration.

Hal Wallis

At the age of ten, when Martin Amis spent a year in Princeton, New Jersey, he was excited and frightened by America. As an adult he has approached that confusing country from many arresting angles, and interviewed its literati, filmmakers, thinkers, opinion makers, leaders and crackpots with characteristic discernment and wit. Included in a gallery of Great American Novelists are Norman Mailer, Gore Vidal, Truman Capote, Joseph Heller, William Burroughs, Kurt Vonnegut, John Updike, Paul Theroux, Philip Roth and Saul Bellow. Amis also takes us to Dallas, where presidential candidate Ronald Reagan is attempting to liaise with born-again Christians. We glimpse the beau monde of Palm Beach, where each couple tries to out-Gatsby the other, and examine the case of Claus von Bulow. Steven Spielberg gets a visit, as does Brian de Palma, whom Amis asks why his films make no sense, and Hugh Hefner's sybaritic fortress and sanitised image are penetrated. There can be little that escapes the eye of Martin Amis when his curiosity leads him to a subject, and America has found in him a superlative chronicler.

Regenesis

We are pleased to announce a new series of environmental history readers, suitable for students. Comprising essays selected from our journals, *Environment and History* and *Environmental Values*, each inexpensive paperback volume will address an important theme in environmental history, combining underlying theory and specific case-studies. The first volume, *Bio-invaders*, investigates the rhetoric and realities of exotic, introduced and 'alien' species. The book comprises a number of general essays, exploring and challenging common perceptions about such species, and a series of case studies of specific species in specific contexts. Its geographical coverage ranges from the United Kingdom to New Zealand by way of South Africa, India and Palestine; and the essays cover both historical and recent introductions.

The Moronic Inferno

The role of material forensics in articulating new notions of the public truth of political struggle, violent conflict, and climate change are the focus of *Forensis*, the HKW exhibition catalog based on the theories of Eyal Weizman. - The concept of forensis was developed as a research project by Goldsmiths College, Centre for Research Architecture by theorist Eyal Weizman. The project is the subject of a major exhibition at the Haus der Kulturen der Welt (HKW) and catalog cum theoretical reader presenting the findings and contributions of over 20 influential architects, artists, filmmakers, and academics. *Forensis*, (Latin for pertaining to the forum) argues for the role of material forensics as central to the interpretation of the ways in which states police and govern their subjects. Forensics engages struggles for justice across frontiers of contemporary conflict through the study of how technology mediates the testimony of material objects such as bones, ruins, toxic substances, etc. In the hopes of unlocking forensics potential as a political practice, the project participants present innovative investigations aimed at producing new kinds of evidence for use by international prosecutorial teams, political organizations, NGOs, and the UN.

Early History of Cleveland, Ohio

"This book combines text and image to reveal the real-life origins of the place where "the women are strong, the men are good-looking and the children above average." Keillor meditates on the enduring culture of the county and on the years he spent there as a young writer and an outsider. And a short story of Lake Wobegon, "October," appears here for the first time in print."--BOOK JACKET.

Bioinvaders

Examines the fate of the West and Yellowstone Park, from those who use the land to make a living to environmentalists fighting to protect it.

Forensis

Eloquent, practical and wise, this book by one of the world's most important scientists—and two time Pulitzer Prize winner—should be read and studied by anyone concerned with the fate of the natural world. It "makes one thing clear ... we know what we do, and we have a choice" (The New York Times Book Review). E.O. Wilson assesses the precarious state of our environment, examining the mass extinctions occurring in our time and the natural treasures we are about to lose forever. Yet, rather than eschewing doomsday prophesies, he spells out a specific plan to save our world while there is still time. His vision is a hopeful one, as economically sound as it is environmentally necessary.

In Search of Lake Wobegon

This book explores an area of contemporary religion, spirituality and popular culture which has not so far been investigated in depth, the phenomenon of astrology in the modern west. Locating modern astrology historically and sociologically in its religious, New Age and millenarian contexts, Nicholas Campion considers astrology's relation to modernity and draws on extensive fieldwork and interviews with leading modern astrologers to present an invaluable contribution to our understanding of the origins and nature of New Age ideology. This book challenges the notion that astrology is either 'marginal' or a feature of postmodernism. Concluding that astrology is more popular than the usual figures suggest, Campion argues that modern astrology is largely shaped by New Age thought, influenced by the European Millenarian tradition, that it can be seen as an heir to classical Gnosticism and is part of the vernacular religion of the modern west.

Last Refuge

In this age of DNA computers and artificial intelligence, information is becoming disembodied even as the "bodies" that once carried it vanish into virtuality. While some marvel at these changes, envisioning consciousness downloaded into a computer or humans "beamed" Star Trek-style, others view them with horror, seeing monsters brooding in the machines. In *How We Became Posthuman*, N. Katherine Hayles separates hype from fact, investigating the fate of embodiment in an information age. Hayles relates three interwoven stories: how information lost its body, that is, how it came to be conceptualized as an entity separate from the material forms that carry it; the cultural and technological construction of the cyborg; and the dismantling of the liberal humanist "subject" in cybernetic discourse, along with the emergence of the "posthuman." Ranging widely across the history of technology, cultural studies, and literary criticism, Hayles shows what had to be erased, forgotten, and elided to conceive of information as a disembodied entity. Thus she moves from the post-World War II Macy Conferences on cybernetics to the 1952 novel *Limbo* by cybernetics aficionado Bernard Wolfe; from the concept of self-making to Philip K. Dick's literary explorations of hallucination and reality; and from artificial life to postmodern novels exploring the implications of seeing humans as cybernetic systems. Although becoming posthuman can be nightmarish, Hayles shows how it can also be liberating. From the birth of cybernetics to artificial life, *How We Became Posthuman* provides an indispensable account of how we arrived in our virtual age, and of where we might go from here.

Sutton Township, Quebec, 1850-1899

The collection of twenty-seven papers published has been grouped into six major categories : corrosion process characterization and modeling, applications of Kramers-Kronig transformations for evaluating the validity of data, corrosion and its inhibition by either corrosion products of specially added inhibitors, corrosion of aluminum and aluminum alloys, corrosion of steel in soils and concrete, and evaluation of coatings on metal substrates.

Electrochemical Impedance

A mixture of science and art, weaving is nearly as old as human history. Despite the many technological advances in the field, however, it is still virtually impossible to control each individual fiber in a woven structure. To help you meet this and other weaving challenges, Handbook of Weaving covers every step of the process clearly and systemati

Handbook of Weaving

In the autumn of 1997, following his sixty-fifth birthday Prof. Dr Herman te Velde retired from the chair of Egyptology at the University of Groningen. On this occasion he was presented with a volume of Egyptological studies in his honour to which colleagues and friends from all over the world contributed. Although the emphasis is on the relation of Ancient Egypt, the book covers a wide range of subjects including history and archaeology, philology and linguistics.

Essays on ancient Egypt

Report offers an extended theoretical and methodological discussion of the logics of collective action and processes by which labor is incorporated into the substantive phases of democratic regime consolidation in the Southern Cone of Latin America. Keywords: South America; Class Compromise; Organized Labor; Argentina; Uruguay; Brazil.

State, Labor, Capital

Excerpt from Housing and Industry The backbone of a community, as well as that of a nation, is its home-loving citizens, therefore, the very life and existence of this great country of ours depends

largely upon the number of individual homes owned, as well as upon the nature of their surroundings. That which is contained herein shows what has been done, and indicates what may be done, toward increasing home building, and is expected to act as an incentive to encourage the future building of homes. Granting it to be the desire of every normal person to own Prime or at least be part owner in a home, the first thought is Factor. how may one be procured. Here the observation is made that three of the principal items to be considered are: first, desires, in which luxuries play the important part; second, necessities; and third, resources. Before finally determining upon the character of the home these three items must be carefully weighed each with the other. While the first and second may seem of most importance, the third - our resources - usually directs the actual extent of the operations. When speaking of homes, let it be understood that we confine ourselves to the single detached house as the true type House. of American home, while double detached, duplex and terrace houses have been found most serviceable, especially in the housing of unskilled labor on a renting basis. The workman's cottage has attracted more than usual attention because of the fact that a considerable shortage of this class of dwellings has existed, more particularly in localities where labor has been mobilized at large manufacturing centers. An unusual demand has been created which in some cases has been supplied, but which in many still remains a troublesome problem. Inasmuch as the resources of the average workman are limited, the prime factor in building this type of dwelling is to limit the cost of construction in every way practicable to supply the workman's needs, and at the same time furnish sufficient for his comfort and happiness at a cost well within his reach. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at www.forgottenbooks.com This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

Housing and Industry (Classic Reprint)

Diseases and injuries were major concerns for ancient Egyptians. This book, featuring some sixty-four objects from the Metropolitan Museum, discusses how both practical and magical medicine informed Egyptian art and for the first time reproduces and translates treatments described in the spectacular Edwin Smith Papyrus.

The Art of Medicine in Ancient Egypt

The move to a new capital, Akhenaten/Amarna, brought essential changes in the depictions of royal women. It was in their female imagery, above all, that the artists of Amarna departed from the traditional iconic representations to emphasize the individual, the natural, in a way unprecedented in Egyptian art.

The Royal Women of Amarna

These studies on the history, art, religions, and literature of Egypt and the ancient Near East include discussions of previously unpublished archaeological excavations and ancient inscriptions. Some essays engage specific literary texts; others are comparative, interpreting the finds, art, and inscriptions, from a variety of ancient societies.

Man and His Double in Egyptian Ideology of the Old Kingdom

This richly illustrated book of vintage photographs commemorates one of the most memorable episodes in the history of archaeology: the discovery and exploration in 1922 of the tomb of the ancient Egyptian pharaoh Tutankhamun (Dynasty 18, ruled ca. 1336-1327 B.C.). These photographs, documenting every stage in the process of discovery, were taken by the renowned archaeological photographer Harry Burton. Burton was a staff member of the Metropolitan Museum Egyptian Expedition when he was "lent" to Howard Carter, the famed excavator of Tutankhamun's tomb. From the rock-cut steps leading down to the entrance passage, to the opening of the sealed chambers inside, to the first view of the contents of the tomb and the removal of the objects, Burton's beautiful black-and-white photographs show thousands of the richly made and decorated objects found in the tomb. Carefully reproduced from Burton's original prints, the photographs are accompanied by new descriptive text written by two prominent Egyptologists with extensive knowledge of the history of Tutankhamun and the contents of his tomb.

Exploring C

Based on the Museum's records of excavations from 1906 to 1934 at the pyramid site of Lisht, revised and augmented by results of recent excavations (1985 to present). Further volumes are in preparation. -- Metropolitan Museum of Art website.

Egypt, Israel, and the Ancient Mediterranean World

Two aspects of the Egyptian civilisation characterise the work of Erik Iversen: Its original art and literature, and its reception in Europe from classical antiquity to Renaissance, Baroque and Romanticism. He is known for his papyrus editions, philological and lexicographical studies, and the tracing of cultural traditions outside of Egypt.

Tutankhamun's Tomb

The present volume is the result of the second international symposium dedicated to the necropolis of Abusir, Saqqara and Dahshur that took place in Prague in June-July 2005. The thirty articles include contributions by Hartwig Altenmueller, Dieter Arnold, Vassil Dobrev, Ludwig Morenz, Miroslav Verner, Christiane Ziegler and numerous other scholars. The contributions cover various aspects of the Memphite region from the Early Dynastic Period to the Roman era, but the bulk of the papers focus on the Abusir-Saqqara necropolis in the Old Kingdom. A study and interpretation of the archaeological remains and literary sources form the main themes of interest among the contributions, but the most characteristic feature of most papers is the use of a combination of archaeological, literary and iconographic material in order to attain a deeper knowledge and better understanding of the Memphite necropolis and its development over time.

The Pyramid of Senwosret I

The theme of divine judgement has often been treated, but usually with a concentration on one of its two main aspects: either that which is seen in the present life and in history or that which is believed to occur only after death. This new study seeks to combine the two aspects. It also tries to cover the whole spectrum of the ancient religions. Special attention is given to Israel, Greece, and Egypt. Israel's neighbours are also considered, and there are discussions of Judaism, Christianity, and Zoroastrianism. In several areas, notably in Egypt and Israel, it is shown that punishment in this life is sometimes presented as a fate that man brings upon himself rather than as one imposed by God, though always against a moral background derived from religion. The origins of judgement after death in the Judaeo-Christian tradition are examined in some detail and elements are traced to Egyptian, Zoroastrian, and Judaic sources.

The Heritage of Ancient Egypt

This volume documents twenty-six monumental tombs of the ancient Egyptian Twelfth Dynasty that were excavated by the Metropolitan Museum Egyptian Expedition from 1906 to 1934 and 1984 to 1991. Focusing on the study and reconstruction of the architecture of the tombs, the book also publishes remains of reliefs and inscriptions that decorated the walls. The author demonstrates the astonishing variety of Middle Kingdom funeral architecture. Whereas some of the Lisht structures relate closely to Old Kingdom mastabas, there is also a new group of freestanding chapels that are derived from contemporary deity temples and foreshadow the temple-tombs of later periods in Egyptian history. Also included is an appendix by James P. Allen on the biographical inscription in one of the tombs

The Rock Tombs of Meir

The nineteen contributions to this volume approach the subject of Egyptian chronology of the Third Millennium BC from different perspectives: some of them concern the use of modern methods (14C) and natural sciences in Egyptology; others analyze the development of various aspects of the Egyptian culture during the whole period of the Old Kingdom and the First Intermediate Period, or try to specify the date of certain monuments and personalities. A study and interpretation of archaeological as well as textual sources and iconographical material is combined in the papers in order to attain a deeper knowledge and better understanding of the Egyptian chronology, archaeology and history of the Third Millennium BC. Contributions by: Hartwig Altenmueller, Tarek El Awady, Miroslav Barta, Ale Bezdek, Vivienne Gae Callender, Andrzej Cwiek, Michael Dee, Mohamed Ismail Khaled, Jaromir Krejci, Juan Carlos Moreno Garcia, John S. Nolan, Hratch Papazian, Patrizia Piacentini, Christopher Bronk Ramsey,

Joanne M. Rowland, Teodozja Rzeuska, Anthony Spalinger, Rainer Stadelmann, Miroslav Verner, Hana Vymazalova, and Anna Wodzinska.

Abusir and Saqqara in the Year 2005

Masterworks from a golden era of ancient Egyptian culture are gathered in this volume, which accompanies a landmark exhibition organized by The Metropolitan Museum of Art in New York, running from September 16, 1999 through January 9, 2000. 130 color illustrations.

The Divine Verdict

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Middle Kingdom Tomb Architecture at Lisht

Fifteen essays in English, French and German.

Chronology and Archaeology in Ancient Egypt

Seven important essays on the study of ancient Egyptian religion. Contents: The cosmology of the pyramid texts (James P Allen); Textual criticism in the coffin texts (David P Silverman); State and religion in the New Kingdom (Jan Assmann); The natural philosophy of Akhenaten (James P Allen); Horus or the crocodiles: a juncture of religion and magic in late Dynastic Egypt (Robert K Ritner); Psychology and society in the ancient Egyptian cult of the dead (Alan B Lloyd); Death and initiation in the funerary religion of ancient Egypt.

The Temple of Dendur

The unique relationship between word and image in ancient Egypt is a defining feature of that ancient culture's records. All hieroglyphic texts are composed of images, and large-scale figural imagery in temples and tombs is often accompanied by texts. Epigraphy and palaeography are two distinct, but closely related, ways of recording, analyzing, and interpreting texts and images. This Handbook stresses technical issues about recording text and art and interpretive questions about what we do with those records and why we do it. It offers readers three key things: a diachronic perspective, covering all ancient Egyptian scripts from prehistoric Egypt through the Coptic era (fourth millennium BCE-first half of first millennium CE), a look at recording techniques that considers the past, present, and future, and a focus on the experiences of colleagues. The diachronic perspective illustrates the range of techniques used to record different phases of writing in different media. The consideration of past, present, and future techniques allows readers to understand and assess why epigraphy and palaeography is or was done in a particular manner by linking the aims of a particular effort with the technique chosen to reach those aims. The choice of techniques is a matter of goals and the records' work circumstances, an inevitable consequence of epigraphy being a double projection: geometrical, transcribing in two dimensions an object that exists physically in three; and mental, an interpretation, with an inevitable selection among the object's defining characteristics. The experiences of colleagues provide a range of perspectives and opinions about issues such as techniques of recording, challenges faced in the field, and ways of reading and interpreting text and image. These accounts are interesting and instructive stories of innovation in the face of scientific conundrum.

Irrigation in Egypt

Previous thinking regarding "oral tradition" imagined a one-way process of transmission, handing down the fairly intact textual chunks that would constitute what we know as the end result, the written Gospels.

When the Pyramids Were Built

This volume constitutes the proceedings of the Second International Conference on Reliability, Safety and Security of Railway Systems, RRSRail 2017, held in Pistoia, Italy, in November 2017. The 16 papers presented in this volume were carefully reviewed and selected from 34 submissions. They are organized in topical sections named: communication challenges in railway systems; formal modeling and verification for safety; light rail and urban transit; and engineering techniques and standards. The book also contains one keynote talk in full-paper length.

Hermes Aegyptiacus

This handsome report describes work in the 1980s and 1990s on the tomb of Udjahorresnet, a prominent official who participated in the Persian occupation of Egypt around 525 BC and may even have been one of their main collaborators. As well as chapters on the results of excavations, on the development of the Saite-Persian shaft tomb tradition, and the finds, this book presents a full review of what we know about this colourful 1st Millennium BC figure.

Religion and Philosophy in Ancient Egypt

Interpretation in Religion is the work of a group of contemporary American, European, and Israeli scholars and philosophers, who analyze the crucial course of interpretation in religion -- religion in general, and, in particular, Hinduism, ancient Egyptian religion, Judaism, christianity, and Islam.

The Oxford Handbook of Egyptian Epigraphy and Palaeography

Today, citizens advocate greater environmental sustainability, better services and the improvement of urban quality by promoting safer mobility, especially for the most vulnerable road users. Addressing these issues, Town and Infrastructure Planning for Safety and Urban Quality contains papers presented at the XXIII International Conference "Living and Walking in Cities" (Brescia, Italy, 15-16 June 2017). The contributions discuss town planning issues, look at best practices and research findings across the broad spectrum of urban and transport planning, with particular attention to the safety of pedestrians in the city. The main topics of the book are: - Urban regeneration. A focus on walkability (vulnerable road users; boosting and planning soft mobility) - Road safety and urban planning - vulnerable road users: planning for safety (integrated land use and transport planning; methodological approaches and case studies; integrated tools for town and transport planning; shaping public spaces and walkability; transport solutions for tourism) - Innovative and traditional solutions for Italian cities - Extra-European

approaches to town and infrastructure planning - Different perspectives in road safety: prevention, infrastructure, sharing - Advances in road safety Town and Infrastructure Planning for Safety and Urban Quality is a powerful plea for a multi-disciplinary and comprehensive approach to urban mobility and planning, and will be of interest to academics, consultants and practitioners interested in these areas.
