Making a Gears Cutting Machine - Making a Gears Cutting Machine by Maciej Nowak Projects 988,526 views 1 year ago 9 minutes, 20 seconds - A simple **machine**, that cuts gears from any material <https://www.instagram.com/mn.projects/> ...

Intro

I used M16 machine tap to make the Gear Cutter

But first the frame. I used an old linear bearing as a guide

On top of the bearing I will fasten a "worktop" of thick steel

The M12 bolt will drive the bearing with the worktop

The tabletop feed is ready. Time to make the frame of the device

Most of the frame is ready. Let's test the drive

I made a sleeve from a steel rod

The sleeve is ready. The tap will rotate in solid bearings

I used an epoxy primer and 2 coats of lacquer

Felt pads will dampen vibrations

I made a square hole in the pulley with a file

The polyamide pad will provide better glide

The device will be driven by a low-speed 12V motor with a high torque

A cover made on a 3D printer will protect the motor from dust

I made the first test on a 32 mm brass disc

The grease on the table will make it easier to rotate the disc

In addition to cutting teeth, the tap rotates the disc

The gear turned out pretty good

I made another 2 brass gears in different sizes

The teeth line up perfectly

The maximum size of the gear is about 120mm

Let's test how the device works with steel

The gears are also suitable for worm gears with an M16 bolts
