QI Basics: Model for Improvement PDSA - QI Basics: Model for Improvement PDSA by Stratis Health 44,236 views 4 years ago 29 minutes - Focuses on The Model for Improvement as a **quality improvement**, framework and utilizing the Plan Do Study Act (PDSA) tool to ...

Common quality improvement (QI) methodologies • Root cause analysis • The Model for Improvement

QI Methodology Commonalities All quality management methodologies share four common themes: • Leadership • Measurement • Staff involvement and team approach • Customer/patient focus

Root Cause Analysis (RCA)

RCA Process 1. Identify the event 2. Form a team 3. Describe the event - where did breakdowns

RCA Process & System Thinking Relies on systems and process thinking • Process

The Model for Improvement: Step by Step

Model for Improvement: Key Benefits • Encourages learning by testing change on a small scale - Pilot the change in one department, with one

What are we trying to accomplish? • Improvement begins with setting aims

Question 1: SMART Goals When setting your goal or aim, make sure it is

How will we know that change is an improvement? Measurement allows us to determine if change is an improvement.

What changes can we make that will result in an improvement? • Clarify actual, current process (process map) • Try to identify these in your current state process

Evaluation • Analyze data • Compare data to your benchmarks and the predicted outcome or goal • What was learned?

Tips for Using PDSA in Your QI Team . Teach the PDSA tool to the group • Discussed and answer the three questions of the Model for Improvement as a group

Which of the following is an example of subjective information?

You are using a pulse oximeter on a patient. You know a pulse oximeter is used to measure what?

You have a patient that has incontinence who wears briefs. What is necessary for patients with stress incontinence?

You have a 70 year old patient that is usually pleasant and easy going. Today she has cognitive delays, is hitting and kicking, and does not know who the staff are. Which condition is the patient likely experiencing?

You have a patient in restraints. You know the proper place to always tie restraints to is where?

How many fingers should you be able to slide under wrist restraints?

20 You have a patient with generalized weakness to transfer from the bed to the chair. Which transfer device would you use?

You have a patient that has pneumonia and is weak. What teaching would you provide to the patient?

20 You are putting linens on a patient's bed. You know that not having wrinkles in the sheets is important because

You see your diabetic patient is sweating, disoriented, and unable to speak. What is the first thing you would assess?

You have a patient who is incontinent of bowel and bladder. You know this patient is at increased risk for what?

Your patient is on strict I/O status. What is important to measure for this patient?

Which one of the following medical abbreviations is inappropriate for use?

You have a new 65 year old diabetic patient on your unit. What is the MOST important thing to do before leaving the room?

Your patient has an indwelling Foley catheter. Where is the best place to position the drainage bag?

SS The patient tells you his pain is 10/10. However, the patient is smiling and talking to his visitors.

You report the pain to the charge nurse because you know that

Which of the following are NORMAL signs of aging?

30 A fracture-type bedpan is used for patients with what condition?

What is the medical abbreviation for before meals and at bedtime?

Which type of precautions would be used for a patient with C. Diff?

When should a patient's weight be taken to obtain an accurate reading?

You are taking care of a patient with MRSA. You need to dispose of your gown and gloves. Where is the proper place to dispose of your gown and gloves?

You are going to help a patient transfer from the wheelchair to the bed. Where would you stand while transferring the patient?

You have a patient on oxygen that wants to use his new electric shaver to shave his face. You know that

A patient has edema in their lower extremities. When repositioning the patient, which position would you put the patient in to aid in decreasing edema?

40 You have a patient that has fallen on the floor. What is the first thing you should do?

Your patient is on a fluid restriction and asks for water. You bring the patient an 8oz cup of water. How would you document the water in the chart?

40 You are providing perineal care to a patient. What is the proper way to clean the patient to avoid contamination or UTI?

You are counting respirations on a patient. What is the proper way to count respirations for a patient?

So All of the following should be ensured while assessing a

A patient tells you that she has had a left sided mastectomy 2 years ago. Where would you take her blood pressure?

A patient is experiencing a seizure. What is the proper thing to do?

What is the best way to palpate a carotid pulse?

You walk into a patient's room and the patient is unresponsive. What is your first step?

There is a fire on your unit. What is the first thing you should do?

So You are working a 12 hour shift. How often should you reposition your patients?

You are coming on shift to meet your patient. What is the best way to ensure patient safety while meeting the patient?

So You have a patient who states that her left calf hurts. You assess it and it is red and warm to the touch. Which condition are you concerned that your patient may be suffering from?

You are transferring a patient that is weak. The patient begins to fall. What is the best thing for you to do?

A patient has fallen and broken his foot. The foot is now in a cast. What is important to assess during your shift?

You are feeding a patient who has orders from speech therapy to perform a chin tuck while drinking liquids. What is the reason for this?

You have a patient with a reddened area on her coccyx. What is best practice to keep the area from becoming a stage II pressure ulcer?

You are changing the linens of a patient's bed. Where should the linen be placed while you are performing the bed change?

Your patient with a Foley catheter bag is wanting to ambulate in the hall to get out of his room. Which of the following is appropriate?

You have a patient wanting to ambulate and walk around. You ask her to sit on the side of the bed for a few minutes before standing so that

You have a patient with dark amber colored urine. You know this is a sign of what?

Which of the following is true about side rails?

60 You have a patient that has a colostomy bag. You are changing the colostomy bag and realize the stoma is dark purple. What is your next step?

You have a patient that you need to chart I/O on for breakfast. The patient had 6 oz of coffee, 8 oz of

a protein shake, and 9 oz of orange juice. How will you document this in the patient's chart?  
70 You have a patient that just received short acting insulin 5 minutes ago for their morning dose. When should the patient eat their breakfast?

The most appropriate nursing order for a patient who develops dyspnea and shortness of breath would be...

The nurse observes that Mr. Adams begins to have increased difficulty breathing. She elevates the head of the bed to the high Fowler position, which decreases his respiratory distress. The nurse documents this breathing as

The physician orders a platelet count to be performed on Mrs. Smith after breakfast. The nurse is responsible for

Answer: C. A platelet count evaluates the number of platelets in the circulating blood volume. The nurse is responsible for giving the patient breakfast at the scheduled time. The physician is responsible for instructing the patient about the test and for writing the order for the test. Mrs. Mitchell has been given a copy of her diet. The nurse discusses the foods allowed on a 500-mg low sodium diet. These include

Answer: B. Mashed potatoes and broiled chicken are low in natural sodium chloride. Ham, olives, and chicken bouillon contain large amounts of sodium and are contraindicated on a low sodium diet. The physician orders a maintenance dose of 5,000 units of subcutaneous heparin (an anticoagulant) daily. Nursing responsibilities for Mrs. Mitchell now include

The four main concepts common to nursing that appear in each of the current conceptual models are

Answer: D. The focus concepts that have been accepted by all theorists as the focus of nursing practice from the time of Florence Nightingale include the person receiving nursing care, his environment, his health on the health illness continuum, and the nursing actions necessary to meet his needs. In Maslow's hierarchy of physiologic needs, the human need of greatest priority is

Answer: D. Maslow, who defined a need as a satisfaction whose absence causes illness, considered oxygen to be the most important physiologic need; without it, human life could not exist. According to this theory, other physiologic needs (including food, water, elimination, shelter, rest and sleep, activity and temperature regulation) must be met before proceeding to the next hierarchical levels on psychosocial needs.

The family of an accident victim who has been declared brain-dead seems amenable to organ donation. What should the nurse do?

Answer: B. The brain-dead patient's family needs support and reassurance in making a decision about organ donation. Because transplants are done within hours of death, decisions about organ donation must be made as soon as possible. However, the family's concerns must be addressed before members are asked to sign a consent form. The body of an organ donor is available for burial. A new head nurse on a unit is distressed about the poor staffing on the 11 p.m. to 7 a.m. shift. What should she do?

Answer: C. Although a new head nurse should initially spend time observing the unit for its strengths and weakness, she should take action if a problem threatens patient safety. In this case, the supervisor is the resource person to approach.

Which of the following principles of primary nursing has proven the most satisfying to the patient and nurse?

Answer: D. Studies have shown that patients and nurses both respond well to primary nursing care units. Patients feel less anxious and isolated and more secure because they are allowed to participate in planning their own care. Nurses feel personal satisfaction, much of it related to positive feedback from the patients. They also seem to gain a greater sense of achievement and esprit de corps

If nurse administers an injection to a patient who refuses that injection, she has committed

Answer: A. Assault is the unjustifiable attempt or threat to touch or injure another person. Battery is the unlawful touching of another person or the carrying out of threatened physical harm. Thus, any act that a nurse performs on the patient against his will is considered assault and battery

If patient asks the nurse her opinion about a particular physicians and the nurse replies that the physician is incompetent, the nurse could be held liable for

Answer: A. Oral communication that injures an individual's reputation is considered slander. Written communication that does the same is considered libel.

A registered nurse reaches to answer the telephone on a busy pediatric unit, momentarily turning away from a 3 month-old infant she has been weighing. The infant falls off the scale, suffering a skull fracture. The nurse could be charged with

Answer: D. Malpractice is defined as injurious or unprofessional actions that harm another. It involves professional misconduct, such as omission or commission of an act that a reasonable and prudent nurse would or would not do. In this example, the standard of care

Which of the following is an example of nursing malpractice?

Which of the following signs and symptoms would the nurse expect to find when assessing an Asian patient for postoperative pain following abdominal surgery?

A patient is admitted to the hospital with complaints of nausea, vomiting, diarrhea, and severe abdominal pain. Which of the following would immediately alert the nurse that the patient has bleeding from the GI tract?

The correct sequence for assessing the abdomen is

High-pitched gurgles head over the right lower quadrant are

A patient about to undergo abdominal inspection is best placed in which of the following positions? For a rectal examination, the patient can be directed to assume which of the following positions? During a Romberg test, the nurse asks the patient to assume which position? If a patient's blood pressure is 150/96, his pulse pressure is

A patient is kept off food and fluids for 10 hours before surgery. His oral temperature at 8 a.m. is 99.8 F (37.7 C) This temperature reading probably indicates

Which of the following parameters should be checked when assessing respirations?

A 38-year old patient's vital signs at 8 a.m. are axillary temperature 99.6 F (37.6 C); pulse rate, 88; respiratory rate, 30. Which findings should be reported?

Palpating the midclavicular line is the correct technique for assessing

Answer: D. The apical pulse (the pulse at the apex of the heart) is located on the midclavicular line at the fourth, fifth, or sixth intercostal space. Baseline vital signs include pulse rate, temperature, respiratory rate, and blood pressure. Blood pressure is typically assessed at the antecubital fossa, and respiratory rate is assessed best by observing chest movement with each inspiration and expiration

The absence of which pulse may not be a significant finding when a patient is admitted to the hospital?

Which of the following patients is at greatest risk for developing pressure ulcers?

Answer: B. Pressure ulcers are most likely to develop in patients with impaired mental status, mobility, activity level, nutrition, circulation and bladder or bowel control. Age is also a factor. Thus, the 88-year old incontinent patient who has impaired nutrition (from gastric cancer) and is confined to bed is at greater risk.

The physician orders the administration of high- humidity oxygen by face mask and placement of the patient in a high Fowler's position. After assessing Mrs. Paul, the nurse writes the following nursing diagnosis: Impaired gas exchange related to increased secretions. Which of the following nursing interventions has the greatest potential for improving this situation?

Answer: A. Adequate hydration thins and loosens pulmonary secretions and also helps to replace fluids lost from elevated temperature, diaphoresis, dehydration and dyspnea. High- humidity air and chest physiotherapy help liquefy and mobilize secretions.

Which of the following statement is incorrect about a patient with dysphagia?

To assess the kidney function of a patient with an indwelling urinary (Foley) catheter, the nurse measures his hourly urine output. She should notify the physician if the urine output is

Certain substances increase the amount of urine produced. These include

Answer: A. Fluids containing caffeine have a diuretic effect. Beets and urinary analgesics, such as pyridium, can color urine red. Kaopectate is an anti diarrheal medication.

A male patient who had surgery 2 days ago for head and neck cancer is about to make his first attempt to ambulate outside his room. The nurse notes that he is steady on his feet and that his vision was unaffected by the surgery. Which of the following nursing interventions would be appropriate?

A patient has exacerbation of chronic obstructive pulmonary disease (COPD) manifested by shortness of breath; orthopnea: thick, tenacious secretions; and a dry hacking cough. An appropriate nursing diagnosis would be

Mrs. Lim begins to cry as the nurse discusses hair loss. The best response would be

An additional Vitamin C is required during all of the following periods except

Answer: B. Additional Vitamin C is needed in growth periods, such as infancy and childhood, and during pregnancy to supply demands for fetal growth and maternal tissues. Other conditions requiring extra vitamin C include wound healing, fever, infection and stress.

A prescribed amount of oxygen is needed for a patient with COPD to prevent

A. Cardiac arrest related to increased partial pressure of carbon dioxide in arterial blood (PaCO<sub>2</sub>) B. Circulatory overload due to hypervolemia C. Respiratory excitement D. Inhibition of the respiratory hypoxic stimulus

Answer: D. Delivery of more than 2 liters of oxygen per minute to a patient with chronic obstructive pulmonary disease (COPD), who is usually in a state of compensated respiratory acidosis (retaining carbon dioxide (CO<sub>2</sub>)), can inhibit the hypoxic stimulus for respiration. An increased partial pressure of carbon dioxide in arterial blood (PaCO<sub>2</sub>) would not initially result in cardiac arrest. Circulatory overload and respiratory excitement have no relevance to the question

After 1 week of hospitalization, Mr. Gray develops hypokalemia. Which of the following is the most significant symptom of his disorder?

Which of the following nursing interventions promotes patient safety? A. Assess the patient's ability to ambulate and transfer from a bed to a chair B. Demonstrate the signal system to the patient C. Check to see that the patient is wearing his identification band D. All of the above

Studies have shown that about 40% of patients fall out of bed despite the use of side rails; this has led to which of the following conclusions?

Examples of patients suffering from impaired awareness include all of the following except

Answer: C. A patient who cannot care for himself at home does not necessarily have impaired awareness; he may simply have some degree of immobility.

The most common injury among elderly persons is: A. Atherosclerotic changes in the blood vessels  
B. Increased incidence of gallbladder disease C. Urinary Tract Infection D. Hip fracture

Answer: D. Hip fracture, the most common injury among elderly persons, usually results from osteoporosis. The other answers are diseases that can occur in the elderly from physiologic changes.

The most common psychogenic disorder among elderly person is

Answer: A. Sleep disturbances, inability to concentrate and decreased appetite are symptoms of depression, the most common psychogenic disorder among elderly persons. Other symptoms include diminished memory, apathy, disinterest in appearance, withdrawal, and irritability. Depression typically begins before the onset of old age and usually is caused by psychosocial, genetic, or biochemical factors

Which of the following vascular system changes results from aging?

Which of the following is the most common cause of dementia among elderly persons?

The nurse's most important legal responsibility after a patient's death in a hospital is

Answer: C. The nurse is legally responsible for labeling the corpse when death occurs in the hospital. She may be involved in obtaining consent for an autopsy or notifying the coroner or medical examiner of a patient's death; however, she is not legally responsible for performing these functions. The attending physician may need information from the nurse to complete the death certificate, but he is responsible for issuing it.

Before rigor mortis occurs, the nurse is responsible for: A. Providing a complete bath and dressing change B. Placing one pillow under the body's head and shoulders C. Removing the body's clothing and wrapping the body in a shroud D. Allowing the body to relax normally

Answer: B. The nurse must place a pillow under the deceased person's head and shoulders to prevent blood from settling in the face and discoloring it. She is required to bathe only soiled areas of the body since the mortician will wash the entire body. Before wrapping the body in a shroud, the nurse places a clean gown on the body and closes the eyes and mouth.

When a patient in the terminal stages of lung cancer begins to exhibit loss of consciousness, a major nursing priority is to

Answer: A. Ensuring the patient's safety is the most essential action at this time. The other nursing actions may be necessary but are not a major priority.

Which of the following laws allow a mentally stable patient to leave AMA (against medical advice) from a hospital?

You're the nurse caring for a patient who is newly diagnosed with CHF. You may ask the UAP to perform all of the following tasks EXCEPT

Medical battery often occurs when a doctor or other healthcare provider denies you the chance to choose whether to get medical therapy. The act may involve touching or other objectionable behavior and is done with intention. Which of the following is an example of medical battery?

As it pertains to medical competence, nurses are required to deliver a level of care that avoids or minimizes risk. What is the term for this?

In the event that you are unable to speak for yourself, a health care proxy designates a trusted individual as your agent, proxy, or representative to communicate your intentions and make healthcare choices on your behalf. The power of attorney will be the health care proxy. Which of the following individuals would need a health care proxy?

What is the name of the act that states that when a patient is admitted to a healthcare institution, the nurse has a legal obligation to explain and educate the patient about advance directives?

Which of the following ensures that patients receive appropriate care, patient independence and decision-making rights, patient respect, privacy, and access to a complaints mechanism?

It is imperative that the nurse advocate for the patient. Which of the following best describes a nurse advocating for a patient?

What is the term for something that often entails giving responsibility for the outcome while assigning non-licensed assistance people to execute activities or duties linked to patient care?

What is the term for a collaborative approach that supports suggested treatment plans to ensure that patients with disabilities, illnesses, or injuries receive the proper medical care?

12 What is the name of the federal legislation that mandated the development of national standards to prevent the disclosure of sensitive patient health information without the patient's knowledge or consent?

There is a fire on a medical surgical unit on the second floor of the hospital. After the nurse has rescued her patients, what is the next step for the nurse to take?

A nurse in an assisted living cares for many different types of older adults with various health conditions. The nurse knows that patients with sensory changes as they age are at a high risk of which of the following?

The UAP walks into a patient's room who is on oxygen and smoking in his bathroom. What should the UAP do immediately?

A housekeeper is taking out the trash when he is stuck by a needle. What is the appropriate next step for the housekeeper?

What is the acronym that is important to remember when using a fire extinguisher in a fire?

What regulatory body is responsible for enforcing compliance with safety rules and procedures in hospitals?

restraints. The nurse notices that the restraints are tied to the bed rails. What action should the nurse take first?

You're assessing a pre-teen with the father present. The father explains that he is concerned that his child is experiencing depression. Which of the following is NOT an indicator that the patient is experiencing depression?

You're assessing a newborn and you begin asking the mom if she wants immunizations for her infant. The mom says no. What is your BEST response to the mother?

You're assessing a 3 day old newborn at his first doctor's appointment. The infant was born at 8 lbs 5 oz. Which of the following would warrant concern for this infant?

You're caring for a patient who was recently diagnosed with glaucoma. You know that which of the following ethnicities is at HIGHEST risk for glaucoma

You're assessing a two week old breastfed infant. Which of the following would cause concern?

You're educating a patient on why pap smears are so important for sexually active women. What response by the patient lets you know that the patient understands the education provided?

A 30 year old patient's mother joins him in his PCP's office for an appointment for evaluation of psychotic symptoms that the patient has been experiencing. The mother states that she has noticed that the patient is very withdrawn when around others, he is beginning to make up words that make no sense to her, and has been laughing very loudly at random. Which of the following diagnoses does the nurse anticipate for this patient?

20 A 14 year old girl reports that she feels very ashamed after she binge eats so she takes many laxatives to "offset" what she eats. When the nurse assesses the patient's teeth are yellow and chipped. Which of the following does the nurse anticipate for this patient?

A patient is newly diagnosed with Alzheimer's disease. This patient often experiences memory loss and takes longer to complete normal tasks. Which of the following should be included in this patient's plan of care at home?

A parent brings their 7 year old child with ADHD to the pediatric office for a well-child check up. Which of the following interventions will be BEST for this patient?

A mother presents to the pediatrician's office concerned for her 5 year child with ASD (autism spectrum disorder). She states that her child will start kindergarten in two weeks and she is afraid that her child will not cope well. Which of the following may the nurse suggest to BEST help the child?

You are assessing a patient with a new ileostomy. You notice that the ostomy is purple. Which of the following is MOST likely the issue with the new ileostomy?

You're caring for a patient with an enteral tube. Your physician's orders say to bolus a 450 mL feeding. Before administering the bolus feed you aspirate 550 mL of gastric fluid. Which nursing action is MOST appropriate?

You're a nurse working in the DHS office in your county. You are administering Covid-19 vaccines. Which method will you use to ensure that the vaccine stays in the muscle and does not leak back into the subcutaneous tissue?

You're caring for a patient in an external fixation device. What is the MOST important nursing intervention for this patient?

30 The following are high risks when administering an enema to an older adult EXCEPT

The nurse is caring for a child post op day one from a tonsillectomy. The patient has ibuprofen ordered as needed. The order is for 150 mg q6 hours PRN for pain. Available is 100 mg/5 mL. How many mL will the nurse administer?

A patient who is 3 hours post op from a hysterectomy is ordered 7.5 mg morphine sulfate q 2 hr PRN for pain. The pharmacy sends a vial constituted to 5mg/10mL. How many mL will the nurse give?

The physician orders enoxaparin sodium for a patient who is chairfast. At what angle do you anticipate injecting this medication for a patient with a BMI of 23?

You're caring for a patient on dilantin for seizures. Which of the following is the MOST important information to educate the patient on?

A patient is receiving IV vancomycin 1500 mg daily for cellulitis of his right leg. The patient's vancomycin is scheduled for 9 am. At which of the following times will the nurse draw a vancomycin trough?

A child is ordered cephalexin for an ear infection. Which of the following medications would alert the nurse to clarify orders with the doctor if found on the patient's

A patient is prescribed warfarin for a recent blood clot. Which of the following foods should the patient be educated on to not consume?

A nurse is providing an enema to a 75 year old female patient. The following are high risks when administering an enema to an older adult EXCEPT

An ED nurse is educating a 17 year old patient and her parents with a newly placed plaster cast to her left arm after sustaining a wrist fracture. Which of the following is the MOST important thing to educate the patient and parents on?

The nurse is caring for an 87 year old new home health patient who has had an extended stay in the hospital after a fall that led to a broken hip that required a hip replacement, followed by hospital acquired pneumonia. Which of the following is MOST important for the nurse to

The nurse is caring for a patient who recently suffered a stroke. The physician orders for the patient to be advanced to a clear liquid diet from NPO. Before allowing the patient to drink, which of the following is MOST important for the nurse to confirm?

A nurse working in the intensive care unit has a patient that is experiencing a sudden upper gastrointestinal bleed.. What is the MOST important intervention?

The nurse is caring for a diabetic patient who the nurse finds sweating and only able to mumble words. What is the FIRST intervention for the nurse to take?

A nurse working on a labor and delivery unit suspects that her patient is having a seizure. What is the MOST important intervention for the nurse to provide?

A nurse is assisting a physician at the patient's bedside with inserting a chest tube. What is the most important intervention by the nurse?

A patient has just had a thoracentesis performed at the bedside. Which of the following is most important for the nurse to do?

A patient who is 3 hours post procedure from a bronchoscopy. The patient suddenly states that he has chest pain and is showing signs of shortness of breath. Which of the following does the nurse suspect?
