

Biliary Tract Radiology

[#Biliary tract imaging](#) [#MRCP](#) [#Gallbladder ultrasound](#) [#Bile duct radiology](#) [#Cholangiography](#)

Biliary tract radiology encompasses a range of medical imaging techniques essential for diagnosing conditions affecting the bile ducts, gallbladder, and associated liver structures. Key modalities like MRCP (Magnetic Resonance Cholangiopancreatography), ultrasound, and CT scans are utilized to identify issues such as gallstones, obstructions, or inflammation, providing crucial information for patient management.

This video is based on the AQA ...

Many organisms reproduce by sexual reproduction eg mammals and flowering plants.

However, some organisms can reproduce by asexual reproduction eg aphids and certain plants.

We are going to start with sexual reproduction.

In sexual reproduction the offspring receive a mixture of genetic information from two parents.

This means that sexual reproduction produces variation in the offspring.

So sexual reproduction gives a species survival advantage by natural selection.

Sexual reproduction gives a species a greater chance of survival if conditions become challenging.

Humans also take advantage of this variation when they carry out selective breeding.

In asexual reproduction only one parent is needed.

asexual reproduction is more efficient in both time and energy. than sexual reproduction

This makes asexual reproduction faster than sexual reproduction.

Because it is fast, asexual reproduction is extremely useful when conditions are favourable.

It allows an organism to produce many genetically identical offspring rapidly.

However, asexual reproduction is very risky.

Because all the offspring are genetically identical, there is a risk they could all die if conditions become unfavorable.

Some organisms can use sexual reproduction or asexual reproduction depending on the circumstances.

In the human host, the malaria parasite reproduces asexually

However, inside the mosquito, the malaria parasite uses sexual reproduction.

Many species of fungi reproduce asexually.

They can also reproduce sexually, producing variation in their offspring.

All flowering plants can reproduce sexually to produce seeds.

This shows a strawberry plant.

However, some plants can also reproduce asexually and strawberry is a good example.

A strawberry plant reproduces asexually by sending out runners.

The offspring are genetically identical to the parent.

what material are you using to study for CT boards?

7 how are you keeping track of required CT exams?

were there older adults in your program?

is it worth it to switch career fields for radiology?

do you have to be registered licensed in every US state?

what does a typical day of work look like?

what hours do you work?

do you prefer CT/MRI over general radiology?

contrast reaction experience?

what kind of exams require IV contrast?

did you ever debate career fields?

most rewarding moment?

advice before starting the rad tech program

can you do on-the-job training to pursue sonography?

pay difference for general x-ray vs. CT/MRI
