The Hot Zone

The bestselling landmark account of the first emergence of the Ebola virus. Now a mini-series drama starring Julianna Margulies, Topher Grace, Liam Cunningham, James D'Arcy, and Noah Emmerich on National Geographic. A highly infectious, deadly virus from the central African rain forest suddenly appears in the suburbs of Washington, D.C. There is no cure. In a few days 90 percent of its victims are dead. A secret military SWAT team of soldiers and scientists is mobilized to stop the outbreak of this exotic "hot" virus. The Hot Zone tells this dramatic story, giving a hair-raising account of the appearance of rare and lethal viruses and their "crashes" into the human race. Shocking, frightening, and impossible to ignore, The Hot Zone proves that truth really is scarier than fiction.

The Hot Zone

Imagine a killer with the infectiousness of the common cold and power of the Black Death. Imagine something so deadly that it wipes out 90% of those it touches. Imagine an organism against which there is no defence. But you don't need to imagine. Such a killer exists: it is a virus and its name is Ebola. The Hot Zone tells what happens when the unthinkable becomes reality: when a deadly virus, from the rain forests of Africa, crosses continents and infects a monkey house ten miles from the White House. Ebola is that reality. It has the power to decimate the world's population. Try not to panic. It will be back. There is nothing you can do...

The Hot Zone

The virus kills nine out of ten of its victims. Its effects are so quick and so gruesome that even biohazard experts are terrified. It is airborne, it is extremely contagious, and it is about to burn through the suburbs of Washington, D.C. Is there any way to stop it? This doomsday scenario confronted a biohazard SWAT team struggling in secret to stop the outbreak of an exotic "hot" virus at an Army research facility outside Washington. "The Hot Zone" tells the dramatic story of their dangerous race against time, along with an alarming account of how previously unknown viruses that have lived undetected in the rain forest for eons are now entering human populations. From the airlocked confines of a biosafety level 4 military lab, to an airliner over Kenya carrying a passenger dissolving into a human virus bomb, to a deserted jungle cave alive with deadly virus, THE HOT ZONE is a non-fiction thriller like no other. "The Andromeda Strain" was fiction--- "this is real!"

The Hot Zone

COMING TO NATIONAL GEOGRAPHIC ON 27 MAY 2019 _____ In March 2014, the Ebola outbreak in West Africa was first reported. By October 2014, it had become the largest and deadliest occurrence of the disease. Over 4,500 people have died. Almost 10,000 cases have been reported, across Liberia, Guinea, Sierra Leone, Nigeria and the United States. Impossible to ignore, The Hot Zone is the terrifying, true-life account of when this highly infectious virus spread from the rainforests of Africa to the suburbs of Washington, D.C in 1989. A secret SWAT team of soldiers and scientists were quickly tasked with halting the outbreak. And they did. But now, that very same virus is back. And we could be just one wrong move away from a pandemic.

Crisis in the Red Zone

NEW YORK TIMES BESTSELLER • An urgent wake-up call about the future of emerging viruses and a gripping account of the doctors and scientists fighting to protect us, told through the story of the deadly 2013–2014 Ebola epidemic "Crisis in the Red Zone reads like a thriller. That the story it tells is all true makes it all more terrifying."—Elizabeth Kolbert, Pulitzer Prize–winning author of *The Sixth Extinction* From the #1 bestselling author of *The Hot Zone*, now a National Geographic original miniseries . . . This time, Ebola started with a two-year-old child who likely had contact with a wild creature and whose entire family quickly fell ill and died. The ensuing global drama activated health professionals in North America, Europe, and Africa in a desperate race against time to contain the viral wildfire. By the end—as the virus mutated into its deadliest form, and spread farther and faster than ever before—30,000 people would be infected, and the dead would be spread across eight countries on three continents. In this taut and suspenseful medical drama, Richard Preston deeply chronicles the pandemic, in which we saw for the first time the specter of Ebola jumping continents, crossing the Atlantic, and infecting

people in America. Rich in characters and conflict—physical, emotional, and ethical—Crisis in the Red Zone is an immersion in one of the great public health calamities of our time. Preston writes of doctors and nurses in the field putting their own lives on the line, of government bureaucrats and NGO administrators moving, often fitfully, to try to contain the outbreak, and of pharmaceutical companies racing to develop drugs to combat the virus. He also explores the charged ethical dilemma over who should and did receive the rare doses of an experimental treatment when they became available at the peak of the disaster. Crisis in the Red Zone makes clear that the outbreak of 2013–2014 is a harbinger of further, more severe outbreaks, and of emerging viruses heretofore unimagined—in any country, on any continent. In our ever more interconnected world, with roads and towns cut deep into the jungles of equatorial Africa, viruses both familiar and undiscovered are being unleashed into more densely populated areas than ever before. The more we discover about the virosphere, the more we realize its deadly potential. Crisis in the Red Zone is an exquisitely timely book, a stark warning of viral outbreaks to come.

The Demon in the Freezer

“The bard of biological weapons captures the drama of the front lines.”—Richard Danzig, former secretary of the navy The first major bioterror event in the United States—the anthrax attacks in October 2001—was a clarion call for scientists who work with “hot” agents to find ways of protecting civilian populations against biological weapons. In *The Demon in the Freezer*, his first nonfiction book since *The Hot Zone*, a #1 New York Times bestseller, Richard Preston takes us into the heart of Usamriid, the United States Army Medical Research Institute of Infectious Diseases at Fort Detrick, Maryland, once the headquarters of the U.S. biological weapons program and now the epicenter of national biodefense. Peter Jahrling, the top scientist at Usamriid, a wry virologist who cut his teeth on Ebola, one of the world’s most lethal emerging viruses, has ORCON security clearance that gives him access to top secret information on bioweapons. His most urgent priority is to develop a drug that will take on smallpox—and win. Eradicated from the planet in 1979 in one of the great triumphs of modern science, the smallpox virus now resides, officially, in only two high-security freezers—at the Centers for Disease Control in Atlanta and in Siberia, at a Russian virology institute called Vector. But the demon in the freezer has been set loose. It is almost certain that illegal stocks are in the possession of hostile states, including Iraq and North Korea. Jahrling is haunted by the thought that biologists in secret labs are using genetic engineering to create a new superpox virus, a smallpox resistant to all vaccines. Usamriid went into a state of Delta Alert on September 11 and activated its emergency response teams when the first anthrax letters were opened in New York and Washington, D.C. Preston reports, in unprecedented detail, on the government’s response to the attacks and takes us into the ongoing FBI investigation. His story is based on interviews with top-level FBI agents and with Dr. Steven Hatfill. Jahrling is leading a team of scientists doing controversial experiments with live smallpox virus at CDC. Preston takes us into the lab where Jahrling is reawakening smallpox and explains, with cool and devastating precision, what may be at stake if his last bold experiment fails.

Inside the Hot Zone

Inside the Hot Zone is an insider’s account of one of the most dangerous workplaces on earth: the United States Army Medical Research Institute of Infectious Diseases (USAMRIID) in Fort Detrick, Maryland. Retired U.S. Army Col. Mark G. Kortepeter, a leading biodefense expert, recounts his journey from the lecture hall to the role of department chief, to the battlefield, to the Biosafety Level-4 maximum containment lab, and finally, to the corner office. During Kortepeter’s seven and a half years in leadership at USAMRIID, the United States experienced some of the most serious threats in modern germ warfare, including the specter of biological weapons during the Iraq War, the anthrax letters sent after 9/11, and a little-known crisis involving a presumed botulism attack on the president of the United States. *Inside the Hot Zone* is a shocking, frightening eye-opener as Kortepeter describes in gripping detail how he and his USAMRIID colleagues navigated threats related to anthrax, botulism, smallpox, Lassa, and Ebola. Kortepeter crafts a rich and riveting narrative as he wrestles with life-and-death decisions managing biological weapon exposures. The stories are real, but they could just as easily serve as plotlines in popular fiction or Hollywood thrillers. He gives the reader a seat at the table as each crisis unfolds, with an unvarnished and personal perspective on the dangers, the drama, the fear, the frustrations, the irony, and the uncertainty he encountered as a physician in the role of “Biodefender.”

Totally Disgusting!

Despite his uncourageous name, Mewkiss proves to be a strong and brave kitten during a crisis in which his mistress's life is threatened.

Ebola

In 1976 a deadly virus emerged from the Congo forest. As swiftly as it came, it disappeared, leaving no trace. Over the four decades since, Ebola has emerged sporadically, each time to devastating effect. It can kill up to 90% of its victims. In between these outbreaks, it is untraceable, hiding deep in the jungle. The search is on to find Ebola's elusive host animal. And until we find it, Ebola will continue to strike. Acclaimed science writer and explorer David Quammen first came near the virus whilst travelling in the jungles of Gabon, accompanied by local men whose village had been devastated by a recent outbreak. Here he tells the story of Ebola, its past, present and its unknowable future.

The Cobra Event

The Cobra Event is set in motion one spring morning in New York City, when a seventeen-year-old student wakes up feeling vaguely ill. Hours later she is having violent seizures, blood is pouring out of her nose, and she has begun a hideous process of self-cannibalization. Soon, other gruesome deaths of a similar nature have been discovered, and the Centers for Disease Control sends a forensic pathologist to investigate. What she finds precipitates a federal crisis. The details of this story are fictional, but they are based on a scrupulously thorough inquiry into the history of biological weapons and their use by civilian and military terrorists. Richard Preston's sources include members of the FBI and the United States military, public health officials, intelligence officers in foreign governments, and scientists who have been involved in the testing of strategic bioweapons. The accounts of what they have seen and what they expect to happen are chilling. The Cobra Event is a dramatic, heart-stopping account of a very real threat, told with the skill and authority that made Preston's *The Hot Zone* an internationally acclaimed bestseller.

Virus Hunter

A New York Times Notable Book The man who led the battle against Ebola in *The Hot Zone* teams up with the bestselling co-author of *Mind Hunter* to chronicle his extraordinary thirty-year career fighting deadly viruses. For three decades, Dr. C. J. Peters was on the front lines of our biological battle against "hot" viruses around the world. In the course of that career, he learned countless lessons about our interspecies turf wars with infectious agents. Called in to contain an outbreak of deadly hemorrhagic fever in Bolivia, he confronted the despair of trying to save a colleague who accidentally infected himself with an errant scalpel. Working in Level 4 labs on the Machupo and Ebola viruses, he saw time and again why expensive high-tech biohazard containment equipment is only as safe as the people who use it. Because of new, emerging viruses, and the return of old, "vanquished" ones for which vaccines do not exist, there remains a very real danger of a new epidemic that could, without proper surveillance and early intervention, spread worldwide virtually overnight. And the possibility of foreign countries or terrorist groups using deadly airborne viruses—the poor man's nuclear arsenal—looms larger than ever. High-octane science writing at its best and most revealing, *Virus Hunter* is a thrilling first-person account of what it is like to be a warrior in the Hot Zone.

The Hot Zone

The Hot Zone by Richard Preston | Digest & Review The Hot Zone is a novel written by Richard Preston that is based on the outbreak of the Ebola virus in the 1980s. It happened at a medical research facility that housed monkeys in Reston, Virginia. Author Richard Preston also writes about and recounts other viral outbreaks that have happened, specifically those that plagued Africa. It is packed with scientific and medical drama, and it is made all the more terrifying because it is based on true events. Best-selling horror author Stephen King described *The Hot Zone* as "horrifying." People have called *The Hot Zone* a "page-turner" and said it is one of the best novels in the Popular Science genre. With this digest companion, you'll enjoy: * A digest of the *The Hot Zone* * Content for your book club or other group event. * Stories beyond the digest and tidbits you may not know * The book's impact and its important to read * And more! What other readers are saying: "You can read it before you read the novel or after you read it as a supplement to the actual book." "Very concise and helpful for our Book Club." "It is full of story information, interesting facts about the novel and the author as well." "This overview gave me an idea of what the book covers. From it, I have been able to decide whether or not to purchase the book." "The Digest helped clarify the historical background. Beautifully written and deeply moving."

Our promise: Reader's Companions bring you immaculate study materials on literature at exceptionally low prices that do not compromise on quality. These are supplementary materials and does not contain any text or summary of the book. 100% satisfaction guaranteed.

China Lake

Barret Baumgart's literary debut presents a haunting and deeply personal portrait of civilization poised at the precipice, a picture of humanity caught between its deepest past and darkest future. In the fall of 2013, during the height of California's historic drought, Baumgart toured the remote military base, NAWS China Lake, near Death Valley, California. His mother, the survivor of a recent stroke, decided to come along for the ride. She hoped the alleged healing power of the base's ancient Native American hot springs might cure her crippling headaches. Baumgart sought to debunk claims that the military was spraying the atmosphere with toxic chemicals to control the weather. What follows is a discovery that threatens to sever not only the bonds between mother and son but between planet Earth and life itself. Stalking the fringes of Internet conspiracy, speculative science, and contemporary archaeology, Baumgart weaves memoir, military history, and investigative journalism in a dizzying journey that carries him from the cornfields of Iowa to drought-riddled California, from the Vietnam jungle to the caves of prehistoric Europe and eventually the walls of the US Capitol, the sparkling white hallways of the Pentagon, and straight into the contradicted heart of a worldwide climate emergency.

We Animals

Drawn from a thousand photos taken over fifteen years, *We Animals* illustrates and investigates animals in the human environment: whether they're being used for food, fashion and entertainment, or research, or are being rescued to spend their remaining years in sanctuaries. Award-winning photojournalist and animal advocate Jo-Anne McArthur provides a valuable lesson about our treatment of animals, makes animal industries visible and accountable, and widens our circle of compassion to include all sentient beings.

The Rime of the Ancient Mariner

A National Bestseller, a New York Times Notable Book, and an Entertainment Weekly Best Book of the Year from the author of *Extra Life* "By turns a medical thriller, detective story, and paean to city life, Johnson's account of the outbreak and its modern implications is a true page-turner." —The Washington Post "Thought-provoking." —Entertainment Weekly It's the summer of 1854, and London is just emerging as one of the first modern cities in the world. But lacking the infrastructure-garbage removal, clean water, sewers-necessary to support its rapidly expanding population, the city has become the perfect breeding ground for a terrifying disease no one knows how to cure. As the cholera outbreak takes hold, a physician and a local curate are spurred to action-and ultimately solve the most pressing medical riddle of their time. In a triumph of multidisciplinary thinking, Johnson illuminates the intertwined histories of the spread of disease, the rise of cities, and the nature of scientific inquiry, offering both a riveting history and a powerful explanation of how it has shaped the world we live in.

The Ghost Map

Seven years before Richard Preston wrote about horrifying viruses in *The Hot Zone*, he turned his attention to the cosmos. In *First Light*, he demonstrates his gift for creating an exciting and absorbing narrative around a complex scientific subject--in this case the efforts by astronomers at the Palomar Observatory in the San Gabriel Mountains of California to peer to the farthest edges of space through the Hale Telescope, attempting to solve the riddle of the creation of the universe. Richard Preston's name became a household word with *The Hot Zone*, which sold nearly 800,000 copies in hardcover, was on The New York Times's bestseller list for 42 weeks, and was the subject of countless magazine and newspaper articles. Preston has become a sought-after commentator on popular science subjects.

First Light

A maddened creature, frothing at the mouth, lunges at an innocent victim—and, with a bite, transforms its prey into another raving monster. It's a scenario that underlies our darkest tales of supernatural

horror, but its power derives from a very real virus, a deadly scourge known to mankind from our earliest days. In this fascinating exploration, journalist Bill Wasik and veterinarian Monica Murphy chart four thousand years in the history, science, and cultural mythology of rabies. The most fatal virus known to science, rabies kills nearly 100 percent of its victims once the infection takes root in the brain. A disease that spreads avidly from animals to humans, rabies has served throughout history as a symbol of savage madness, of inhuman possession. And today, its history can help shed light on the wave of emerging diseases, from AIDS to SARS to avian flu, that we now know to originate in animal populations. From Greek myths to zombie flicks, from the laboratory heroics of Louis Pasteur to the contemporary search for a lifesaving treatment, *Rabid* is a fresh, fascinating, and often wildly entertaining look at one of mankind's oldest and most fearsome foes.

Rabid

A riveting thriller reminiscent of *The Hot Zone*, this true story dives into the mystery surrounding one of the most controversial and misdiagnosed conditions of our time--Lyme disease--and of Willy Burgdorfer, the man who discovered the microbe behind it, revealing his secret role in developing bug-borne biological weapons, and raising terrifying questions about the genesis of the epidemic of tick-borne diseases affecting millions of Americans today. While on vacation on Martha's Vineyard, Kris Newby was bitten by an unseen tick. That one bite changed her life forever, pulling her into the abyss of a devastating illness that took ten doctors to diagnose and years to recover: Newby had become one of the 300,000 Americans who are afflicted with Lyme disease each year. As a science writer, she was driven to understand why this disease is so misunderstood, and its patients so mistreated. This quest led her to Willy Burgdorfer, the Lyme microbe's discoverer, who revealed that he had developed bug-borne bioweapons during the Cold War, and believed that the Lyme epidemic was started by a military experiment gone wrong. In a superb, meticulous work of narrative journalism, *Bitten* takes readers on a journey to investigate these claims, from biological weapons facilities to interviews with biosecurity experts and microbiologists doing cutting-edge research, all the while uncovering darker truths about Willy. It also leads her to uncomfortable questions about why Lyme can be so difficult to both diagnose and treat, and why the government is so reluctant to classify chronic Lyme as a disease. A gripping, infectious page-turner, *Bitten* will shed a terrifying new light on an epidemic that is exacting an incalculable toll on us, upending much of what we believe we know about it.

Ebola

The worst storm in history seen from the wheelhouse of a doomed fishing trawler; a mesmerisingly vivid account of a natural hell from a perspective that offers no escape.

Bitten

This history of mankind's battles against infectious diseases looks at how epidemics shaped empires and economies and how medical revolutions freed us from these cycles until new threats arose caused by changes in global trade and climate.

The Perfect Storm: A True Story of Men Against the Sea

Examines the emergence and causes of new diseases all over the world, describing a process called "spillover" where illness originates in wild animals before being passed to humans and discusses the potential for the next huge pandemic. 70,000 first printing.

The Plague Cycle

DIVShows how narratives of contagion structure communities of belonging and how the lessons of these narratives are incorporated into sociological theories of cultural transmission and community formation./div

Spillover: Animal Infections and the Next Human Pandemic

Mario Bellatin's complex dreamscape, offered here in a brand-new translation, presents a timely allegorical portrait of the body and society in decay, victim to inscrutable pandemic. In a large, unnamed city, a strange, highly infectious disease begins to spread, afflicting its victims with an excruciating descent toward death, particularly unsparing in its assault of those on society's margins. Spurned by their loved ones and denied treatment by hospitals, the sick are left to die on the streets until a beauty

salon owner, whose previous caretaking experience extended only to the exotic fish tanks scattered among his workstations, opens his doors as a refuge. In the ramshackle Morgue, victim to persecution and violence, he accompanies his male guests as they suffer through the lifeless anticipation of certain death, eventually leaving the wistful narrator in complete, ill-fated isolation.

Contagious

'We thought we had lived through the terror of a nuclear war, but something far more ominous was brewing in the Soviet Union - a biological Armageddon from which no one would escape. Dr Alibek has emerged from the world's deadliest labs to tell a story that is as important as it is chilling. Sometimes the truth is far worse than fiction. No one can afford not to read this book.' Robin Cook 'As the top scientist in the Soviet Union's biowarfare program and the inventor of the world's most powerful anthrax, Dr Ken Alibek has stunned the highest levels of the U.S. government with his revelations. Now, in a calm, compelling, utterly convincing voice, he tells the world what he knows. Modern biology is producing weapons that in killing power may exceed the hydrogen bomb. Ken Alibek describes them with the intimate knowledge of a top weaponeer.' Richard Preston, author of The Hot Zone

Beauty Salon

What is the true origin of COVID-19? President Joe Biden has ordered US intelligence agencies to further investigate the origins of COVID-19. Clearly, the US government isn't decided on what really happened at the start of the pandemic. Was it truly a animal to human transmission to be blamed on a bat in a Wuhan, China wet market? Or was a much more sinister plan at work? In 2020, Dr. Richard M. Fleming began investigating SARS-CoV-2/COVID-19. Using both his "Inflammation" Theory and Patent (FMTVDM; the first method capable of measuring regional blood flow and metabolic changes occurring inside the body, which makes it possible to accurately determine what is happening inside the body as well as whether treatments prescribed for patients are working or not), he investigated COVID treatments. Simultaneously he began investigating the origins of COVID-19. This book details much of what he has found. What he discovered will shock you. By 1999, US Federal Agencies began funding Gain-of-Function research. Research that by its very nature is designed to increase the ability of pathogens to infect and harm people. In 2019, one of those pathogens was intentionally released upon the world in the Wuhan Wet Market. The key to proving and understanding this bioweapon is its spike protein. The very same spike protein now being made in millions of people after the COVID vaccines are injected into them. These vaccines are nothing more than the genetic code of this bioweapon. This book traces the publication and money trail of COVID-19; showing who is ultimately criminally responsible for the design and development of this weapon, which violates the Biological Weapons Convention (BWC) Treaty, exposing those who have committed crimes against humanity. Dr. Fleming will reveal the ultimate conspiracy: one that puts the future of the entire world at stake.

Biohazard

Traversing into another world, Zhang Xuan finds himself becoming an honorable teacher. Along with his transcension, a mysterious library appears in his mind. As long as it is something he has seen, regardless of whether it is a human or an object, a book on its weaknesses will be automatically compiled in the library. Thus, he becomes formidable. "Monarch Zhuoyang, why do you detest wearing your underwear so much? As an emperor, can't you pay a little more attention to your image?" "Fairy Linglong, you can always look for me if you find yourself unable to sleep at night. I am skilled in lullabies!" "And you, Demon Monarch Qiankun! Can you cut down on the garlic? Are you trying to kill me with that stench?" This is an incredible story about teachers and students, grooming and guiding the greatest experts in the world! Discord Chat Group: <https://discord.gg/ATHVehx> Tags

Is COVID-19 a Bioweapon?

Behind every disease is a story, a complex narrative woven of multiple threads, from the natural history of the disease, to the tale of its discovery and its place in history. But what is vital in all of this is how the disease spreads and develops. In The Atlas of Disease, Sandra Hemple reveals how maps have uncovered insightful information about the history of disease, from the seventeenth century plague maps that revealed the radical idea that diseases might be carried and spread by humans, to cholera maps in the 1800s showing the disease was carried by water, right up to the AIDs epidemic in the 1980s and the recent Ebola outbreak. Crucially, The Atlas of Disease will also explore how cartographic techniques have been used to combat epidemics by revealing previously hidden patterns.

These discoveries have changed the course of history, affected human evolution, stimulated advances in medicine and shaped the course of countless lives.

Library of Heaven's Path

The story of Nucor's billion dollar gamble to build a steel mill in Crawfordsville, Indiana.

The Atlas of Disease

Using humour and real science in the tradition of Mary Roach, this groovy narrative from the author of National Geographic's popular Gory Details blog illuminates the gross, strange, morbid, and outright absurd realities of our bodies, our earth, and our universe. Filled to the brim with far-out facts, this wacky, funny, and informative narrative takes us on a fascinating journey through the astonishing world of science. With Erika Engelhaupt, founding editor of National Geographic's Gory Details blog, as your guide, all your weirdest and wildest fascinations will be illuminated. From the biologist who endured countless honeybee stings to test which spot was the most painful to the dollhouse-sized replicas of crime scenes built to analyze blood splatter to NASA's enduring dilemma--do women need to have their periods in space?--this entertaining book explores oft-ignored but alluring facets of biology, anatomy, space exploration, nature, and more. Featuring top-notch reporting, interviews with leading researchers in the field, and a healthy dose of wit, Gory Details depicts the world's most intriguing real-world applications of science in all their glory--making geekiness cool all over again!

American Steel

The 2013-2014 Ebola epidemic was the deadliest ever. The ensuing global drama activated health professionals in North America, Europe, and Africa in a desperate race against time to contain the viral wildfire. By the end-- as the virus mutated into its deadliest form-- 30,000 people would be infected across three continents. Preston chronicles the outbreak, writing of doctors and nurses in the field putting their own lives on the line, of government bureaucrats and NGO administrators moving, often fitfully, to try to contain the outbreak, and of pharmaceutical companies racing to develop drugs to combat the virus. He makes clear that the outbreak of 2013-2014 is a harbinger of further, more severe outbreaks, and of emerging viruses heretofore unimagined. -- adapted from jacket

The Cult at the End of the World

Read this gripping, timely book about the transmission of deadly viruses from animal to human populations, and how we can fight the current Covid-19 pandemic. WITH A NEW AFTERWORD ON CORONAVIRUS As globalization spreads and as we destroy the ancient ecosystems, we encounter strange and dangerous infections that originate in animals but that can be transmitted to humans. Diseases that were contained are being set free and the results are potentially catastrophic. In a journey that takes him from southern China to the Congo, from Bangladesh to Australia, David Quammen tracks these infections to their source, and asks what we can do to prevent some new pandemic spreading across the face of the earth. As we continue to feel the global impact of Covid-19, discover the book that predicted this viral disaster and the science that could stop the next one in its tracks. 'A tremendous book...this gives you all you need to know and all you should know' Sunday Times 'Chilling... [A] brilliant, devastating book' Daily Mail 'A frightening and fascinating masterpiece of science reporting that reads like a detective story' Walter Isaacson

Gory Details

THE #1 NEW YORK TIMES BESTSELLER 'Everything you need to know about one of the deadliest outbreaks in human history' Bill Gates 'Easily our fullest, richest, most panoramic history of the subject' New York Times Book Review In 1918, the world faced the deadliest pandemic in human history. What can the story of the so-called Spanish Flu teach us about the fight against present day crises, and how to prepare for future outbreaks? At the height of WWI, history's most lethal influenza virus erupted in an army camp in Kansas, moved east with American troops, then exploded, killing as many as 100 million people worldwide. It killed more people in twenty-four months than AIDS killed in twenty-four years, more in a year than the Black Death killed in a century. But this was not the Middle Ages, and 1918 marked the first collision of science and epidemic disease. Magisterial in its breadth of perspective and depth of research, The Great Influenza is ultimately a tale of triumph amid tragedy, which provides us

with a precise and sobering model as we confront the aftermath of Covid-19 and future pandemics looming on the horizon.

Crisis in the Red Zone

A NEW YORK TIMES NOTABLE BOOK • The dramatic story of the Flint water crisis, by a relentless physician who stood up to power. “Stirring . . . [a] blueprint for all those who believe . . . that ‘the world . . . should be full of people raising their voices.’”—The New York Times “Revealing, with the gripping intrigue of a Grisham thriller.” —O: The Oprah Magazine Here is the inspiring story of how Dr. Mona Hanna-Attisha, alongside a team of researchers, parents, friends, and community leaders, discovered that the children of Flint, Michigan, were being exposed to lead in their tap water—and then battled her own government and a brutal backlash to expose that truth to the world. Paced like a scientific thriller, *What the Eyes Don't See* reveals how misguided austerity policies, broken democracy, and callous bureaucratic indifference placed an entire city at risk. And at the center of the story is Dr. Mona herself—an immigrant, doctor, scientist, and mother whose family's activist roots inspired her pursuit of justice. *What the Eyes Don't See* is a riveting account of a shameful disaster that became a tale of hope, the story of a city on the ropes that came together to fight for justice, self-determination, and the right to build a better world for their—and all of our—children. Praise for *What the Eyes Don't See* “It is one thing to point out a problem. It is another thing altogether to step up and work to fix it. Mona Hanna-Attisha is a true American hero.”—Erin Brockovich “A clarion call to live a life of purpose.”—The Washington Post “Gripping . . . entertaining . . . Her book has power precisely because she takes the events she recounts so personally. . . . Moral outrage present on every page.”—The New York Times Book Review “Personal and emotional. . . . She vividly describes the effects of lead poisoning on her young patients. . . . She is at her best when recounting the detective work she undertook after a tip-off about lead levels from a friend. . . . Flint will not be defined by this crisis,’ vows Ms. Hanna-Attisha.”—The Economist “Flint is a public health disaster. But it was Dr. Mona, this caring, tough pediatrician turned detective, who cracked the case.”—Rachel Maddow

Spillover

From the author of *Jurassic Park*, *Timeline*, and *Sphere* comes a captivating thriller about a deadly extraterrestrial microorganism, which threatens to annihilate human life. Five prominent biophysicists have warned the United States government that sterilization procedures for returning space probes may be inadequate to guarantee uncontaminated re-entry to the atmosphere. Two years later, a probe satellite falls to the earth and lands in a desolate region of northeastern Arizona. Nearby, in the town of Piedmont, bodies lie heaped and flung across the ground, faces locked in frozen surprise. What could cause such shock and fear? The terror has begun, and there is no telling where it will end.

The Great Influenza

One of Entertainment Weekly's Best Books of 2022! "New York Times journalist Kyle Buchanan details the bonkers construction of director George Miller's long-awaited and often seemingly-doomed fourth *Mad Max* movie via testimony from the filmmaker, Charlize Theron, Tom Hardy, and a host of others. The result is an epic and – when it comes to the Theron-Hardy on-set relationship – acrimonious tale no less jaw-dropping than the movie itself." — Entertainment Weekly A full-speed-ahead oral history of the nearly two-decade making of the cultural phenomenon *Mad Max: Fury Road*—with more than 130 new interviews with key members of the cast and crew, including Charlize Theron, Tom Hardy, and director George Miller, from the pop culture reporter for The New York Times, Kyle Buchanan. It won six Oscars and has been hailed as the greatest action film ever, but it is a miracle *Mad Max: Fury Road* ever made it to the screen... or that anybody survived the production. The story of this modern classic spanned nearly two decades of wild obstacles as visionary director George Miller tried to mount one of the most difficult shoots in Hollywood history. Production stalled several times, stars Tom Hardy and Charlize Theron clashed repeatedly in the brutal Namib Desert, and Miller's crew engineered death-defying action scenes that were among the most dangerous ever committed to film. Even accomplished Hollywood figures are flummoxed by the accomplishment: As the director Steven Soderbergh has said, “I don't understand how they're not still shooting that film, and I don't understand how hundreds of people aren't dead.” Kyle Buchanan takes readers through every step of that moviemaking experience in vivid detail, from *Fury Road*'s unexpected origins through its outlandish casting process to the big-studio battles that nearly mutilated a masterpiece. But he takes the deepest dive in reporting the astonishing facts behind a shoot so unconventional that the film's fantasy world

began to bleed into the real lives of its cast and crew. As they fought and endured in a wasteland of their own, the only way forward was to have faith in their director's mad vision. But how could Miller persevere when almost everything seemed to be stacked against him? With hundreds of exclusive interviews and details about the making of *Fury Road*, readers will be left with one undeniable conclusion: There has never been a movie so drenched in sweat, so forged by fire, and so epic in scope.

What the Eyes Don't See

"One of those books you literally can't put down . . . makes The Hot Zone virus—far away in a rainforest—look like no big deal."—Detroit Free Press Five days ago, a homeless man on a subway platform died in agony as startled commuters looked on. Yesterday, a teenager started having violent, uncontrollable spasms in art class. Within minutes, she too was dead. Dr. Alice Austen is a medical pathologist at the Centers for Disease Control in Atlanta. What she knows is that the two deaths are connected. What she fears is that they are only the beginning. . . . "Manages to grab you with the authenticity of its scientific detective work and haunt you with its sheer plausibility."—Entertainment Weekly
